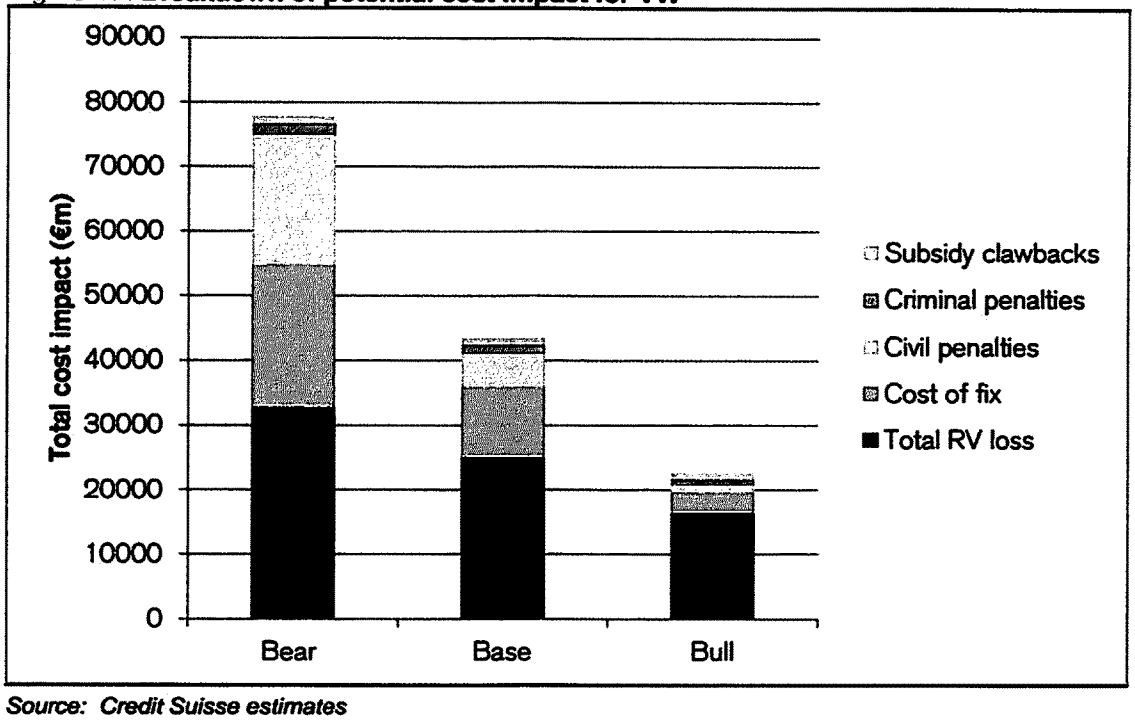
92. Nonetheless, some attempts at calculation have been made. On October 2, Credit Suisse disseminated an analysis showing Volkswagen's anticipated costs in a "bull" scenario (where events turned out favorably to it), a "base" scenario, and a "bear" scenario (where events turned out unfavorably).[102] The "bull" scenario was $25.6 billion in costs, while the "bear" scenario was $87.1 billion. The analysis is summarized in the following chart:

Figure 17: **Breakdown of potential cost impact for VW**



Source: Credit Suisse estimates

As can be seen, costs associated with criminal and civil penalties make up a significant portion of the differing amounts. Credit Suisse also predicts that Volkswagen's stock may decline another 20%.

VI. CLASS ACTION ALLEGATIONS.

93. Plaintiffs bring this action both on behalf of themselves, and as a class action pursuant to Federal Rules of Civil Procedure 23(a) and (b)(3), on behalf of the following class (the

[102] http://www.businessinsider.com/credit-suisse-volkswagen-shares-could-fall-another-20-2015-10?r=UK&IR=T.

VW FOIA, EPA 06/20/2017 2017-FFP_030745

"Class").

> All persons and entities who purchased or leased a Class Vehicle from a Volkswagen Authorized Dealer in the United States. Excluded from the Class are Defendants, their parent companies, subsidiaries and affiliates, any co-conspirators, all governmental entities, and any judges or justices assigned to hear any aspect of this action.

The Class includes subclasses of persons located in California and Virginia. These will be referred to herein as the "California Subclass" and the "Virginia Subclass."

94. Plaintiffs do not know the exact number of Class and Subclass members but believe based on published reports that there are more than 482,000 Class members, geographically dispersed throughout the United States such that joinder of all class members is impracticable. The identity of Class members can be determined from the internal records of Volkswagen.

95. Plaintiffs' claims are typical of the claims of the Class and Subclasses in that Plaintiffs purchased or leased a Class Vehicle from a Volkswagen Authorized Dealer in the United States. All Class and Subclass members were damaged by the same wrongful conduct of Defendants and their co-conspirators as alleged herein, and the relief sought is common to the class.

96. Common questions of law and fact predominate over any individual questions. These questions include, but are not limited to:

- Whether Volkswagen unlawfully acquired a monopoly in the Clean Diesel Car Market;
- Whether the Clean Diesel Car Market is a properly defined product market for purposes of Section 2 of the Sherman Act;
- Whether Volkswagen's acquisition and/or maintenance of a monopoly in the Clean Diesel Car Market had the effect of increasing to supracompetitive levels the retail prices of Class Vehicles;
- Whether Volkswagen violated the CAA and applicable regulations;
- Whether Volkswagen violated California Pollution Control laws and applicable

regulations;

- Whether Volkswagen's conduct violated RICO;
- Whether the Volkswagen RICO Enterprise as defined herein is a cognizable RICO enterprise;
- Whether Volkswagen committed federal mail and wire fraud, thus establishing predicate acts under RICO:
- Whether Volkswagen engaged in a pattern of racketeering activity;
- Whether Plaintiffs and Class members were injured in their business or property, and, if so, what is the appropriate measure of their damages;
- Whether Volkswagen misrepresented the environmental impact of its Class Vehicles;
- Whether Volkswagen misrepresented the Class Vehicles' emission standards compliance, fuel efficiency or performance;
- Whether Volkswagen violated the Magnuson-Moss Warranty Act;
- Whether Volkswagen violated California's Consumer Legal Remedies Act;
- Whether Volkswagen violated California's Unfair Competition Law;
- Whether Volkswagen violated California's False Advertising Law;
- Whether Volkswagen violated Virginia's Consumer Protection Law;
- Whether Volkswagen committed fraudulent concealment;
- Whether Volkswagen was unjustly enriched;
- Whether Plaintiffs and the other members of the Class and Subclasses were injured by Defendants' conduct, and, if so, the appropriate classwide measure of damages for Class members; and
- The scope of any injunctive and other equitable relief to which Plaintiffs and the other members of the Class and Subclasses are entitled.

97. These and other questions of law and fact are common to the Class and Subclasses

VW FOIA, EPA 06/20/2017 2017-FFP_030747

predominate over any questions affecting only individual Class members.

98. Plaintiffs' claims are typical of the claims of the Class and Subclasses because Plaintiffs purchased a Class Vehicle from a Volkswagen Authorized Dealer in the United States.

99. Plaintiffs will fairly and adequately represent the interests of the Class and Subclasses in that they have no conflict with any other members of the Class and Subclasses. Furthermore, Plaintiffs have retained competent counsel experienced in antitrust, class action, and other complex litigation.

100. Defendants have acted on grounds generally applicable to the Class, thereby making final injunctive relief appropriate with respect to the Class and Subclasses as a whole.

101. This class action is superior to the alternatives, if any, for the fair and efficient adjudication of this controversy. Prosecution as a class action will eliminate the possibility of repetitive litigation. There will be no material difficulty in the management of this action as a class action. The prosecution of separate actions by individual Class and Subclass members would create the risk of inconsistent or varying adjudications, establishing incompatible standards of conduct for Defendants.

CAUSES OF ACTION

FIRST CLAIM

Violation of the Section 2 of the Sherman Antitrust Act (Monopolization) (15 U.S.C. § 2).

102. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

103. The relevant product market for purposes of Plaintiffs' claims under Section 2 of the Sherman Act is the Clean Diesel Car Market, which, as noted above, consists of: (a) the product market of Clean Diesel passenger cars and (b) a geographic market consisting of the United States. All diesel fuel sold in the United States during the relevant period is "clean diesel fuel", with 97% less sulfur than the diesel sold in the 1970s. Similarly, all diesel cars sold in the United States since 2007 (which have had to meet the same emission standards as gasoline engines) have advanced engines and emissions control technology that make the diesel engines cleaner than in

VW FOIA, EPA 06/20/2017 2017-FFP_030748

the past, are able to take advantage of the clean diesel fuel, and use exhaust systems that further reduce diesel engine emissions.

104. As Volkswagen's own market research and market research by others described above have demonstrated, clean diesel cars are not in the same relevant market as gasoline or even hybrid cars of similar size and class. Diesel engines require the use of a different and more expensive fuel than gasoline-powered engines, can travel much greater distances on a single tank of fuel, and are more expensive. Unlike hybrid or electric vehicles, diesel-powered vehicles do not have to be plugged in, can travel greater distances without refueling or plugging in, and -- particularly with more recent compression technology like the Volkswagen's TDI engines -- have greater torque, acceleration, and towing power. In addition, the demographics of the clean diesel buyers are distinct from those of hybrid buyers; they are more likely to be male, younger, and less likely to have children.

105. At all relevant times, Volkswagen has been a competitor in the Clean Diesel Car Market, and has maintained significant market share. As the chart presented by Skorupski of VWoA depicted above demonstrates, Volkswagen's share of the Clean Diesel Car Market has been 70% or more during the entire relevant period.

106. Barriers to entry in the Clean Diesel Car Market are high. In addition to the barriers to entry and expansion posed by Volkswagen's anticompetitive conduct, as described in this Complaint, other barriers to entry include: high research and development costs, high costs of making diesel engines that are EPA- and CARB-compliant, and high capital costs.

107. Consumers, experts and commentators in the automotive industry, and the automobile manufacturers themselves, including Volkswagen, all recognize the Clean Diesel Car market as distinct from markets including gasoline, hybrid, or electric cars.

108. Volkswagen has monopoly power in the Clean Diesel Car Market.

109. Through the anticompetitive use of the defeat device and its deception of the EPA, CARB, Plaintiffs, and the Class, Volkswagen has willfully acquired and/or maintained its

VW FOIA, EPA 06/20/2017 2017-FFP_030749

monopoly of the Clean Diesel Car Market. This conduct has harmed competition in that market, and has caused injury to every person that purchased or leased a Class Vehicle. The purchase or lease price was higher than it would have been in a competitive market; the supply and selection of products was lower than it would have been in a competitive market; innovation has been stifled; and the number and effectiveness of competitors in that Market has been diminished by unlawful means.

110. As a result of this violation of law, the price of Class Vehicles was higher than it otherwise would have been.

111. There is no legitimate business justification for the conduct described in this Complaint which has facilitated Volkswagen's monopolization of the Clean Diesel Car Market.

112. The anticompetitive conduct described in this Complaint has caused injury to the business or property of Plaintiffs and members of the Class and is in violation of section two the Sherman Act (15 U.S.C. § 2).

113. Plaintiffs are buyers of Class Vehicles in the Clean Diesel Car Market; they are thus direct participants in the monopolized market. Volkswagen issues warranties directly to Class Vehicle buyers. The Volkswagen Authorized Dealers[103] obtain Class Vehicles from Volkswagen (through its American subsidiaries) that are certified to be EPA- and/or CARB-compliant and, as noted above, have visible stickers to that effect. The emissions testing that is used to justify those certifications is undertaken by VWoA in the United States.[104] Class Vehicles so labeled are

[103] In a recent recall notice unrelated to Dieselgate, Volkswagen has indicated that it has 652 authorized dealers in the United States. https://media.vw.com/doc/1456/volkswagen_issues_voluntary_recall-tiguan_label_recall_release-17883691505565f01ccc4bb.pdf. Their names and addresses can be identified through Volkswagen's records. The Volkswagen Authorized Dealers have a 12-person National Dealer Advisory Council that interacts closely with VWoA on such issues as company management.

[104] http://www.manufacturing.net/news/2015/10/vw-pollution-test-site-under-scrutiny-amid-emissions-cheating-scandal.

VW FOIA, EPA 06/20/2017 2017-FFP_030750

displayed on the showroom floors of Volkswagen Authorized Dealers. The false certifications by Volkswagen were one of the critical elements of its unlawful scheme of monopolization. The Volkswagen Authorized Dealers were agents of Volkswagen for the purpose of disseminating these false certifications and representations by Volkswagen to customers in order to induce them to purchase TDI Clean Diesel vehicles. In addition, Volkswagen (through its American subsidiaries) sets the Manufacturer's Suggested Retail Price ("MSRP") for Class Vehicles, which includes the premium for the TDI Clean Diesel technology described herein. While Volkswagen Authorized Dealers could charge customers a price less than the MSRP (such as when Volkswagen provides rebates or short-term retail promotions), that lesser price is nonetheless keyed off the MSRP and still contains a portion of the premium for the sham TDI Clean Diesel technology. This case involves retail prices for Class Vehicles paid by consumers like plaintiffs, who are participants in the relevant market and who pay more for those vehicles because of Volkswagen's illegal monopolistic practices.

SECOND CLAIM

Violation of Section 2 of the Sherman Antitrust Act (Attempted Monopolization) (15 U.S.C. § 2).

114. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

115. Volkswagen has acted with specific intent to monopolize the Clean Diesel Car Market as described above through the anticompetitive use of the defeat device and its deception of the EPA, CARB, Plaintiffs, and the Class.

116. There was and is a dangerous probability that Volkswagen will succeed in its attempt to monopolize the Clean Diesel Car Market because Volkswagen controls a large percentage of that market and has the ability to and actually did exclude competitors through the anticompetitive conduct described in this Complaint.

117. Volkswagen's conduct has harmed competition in the Clean Diesel Car Market, making the supply and selection of available Clean Diesel Cars lower than it would be in a competitive market.

VW FOIA, EPA 06/20/2017 2017-FFP_030751

118. There is no legitimate business justification for the conduct described in this Complaint which has facilitated Volkswagen's monopolization of the Clean Diesel Car Market.

119. The anticompetitive conduct described in this Complaint has caused injury to the business or property of Plaintiffs and members of the Class and is in violation of the Sherman Act (15 U.S.C. § 2).

THIRD CLAIM

Violation of the Racketeer Influenced and Corrupt Organizations Act ("RICO") (18 U.S.C. §§ 1962(c), 1964).

120. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

121. Each Plaintiff is a "person" within the meaning of 18 U.S.C. § 1964(c), and each has sustained injury to his or her business or property as a result of Volkswagen's conduct described in this Complaint.

122. Each Defendant is a "person" within the meaning of 18 U.S.C. § 1961(3).

123. Defendants violated 18 U.S.C. §1962(c) by participating in or conducting the affairs of the Volkswagen RICO Enterprise through a pattern of racketeering activity.

124. For the past seven years, Volkswagen has engaged in a deliberate, pre-meditated and continuous effort to deceive Plaintiffs, members of the Class, and federal and state regulators into believing that the Class Vehicles are environmentally-friendly, fuel-efficient, and EPA- and CARB-compliant. Unknown to Plaintiffs, Class members and federal and state regulators, Volkswagen installed pollution control defeat devices into the Class vehicles that turned off the pollution controls when the cars were in normal operating mode.

125. Plaintiffs and Class members had no way of knowing that these systems were disabled by Volkswagen. Pursuant to the CAA, Volkswagen was required to equip its cars with on-board diagnostic systems that trigger a dashboard "check engine" light that alerts the driver of a possible pollution control device malfunction. The Class Vehicles' diagnostic systems did not trigger this "check engine light," because the defeat device was designed to evade EPA and CARB pollution controls.

VW FOIA, EPA 06/20/2017 2017-FFP_030752

126. In dozens of advertising campaigns and statements and in certifications of EPA and CARB compliance Volkswagen has falsely represented the Class Vehicles' "green credentials" and performance.

127. Volkswagen engaged in a common course of conduct and conspiracy with the common purpose of defrauding Plaintiffs and members of the Class into purchasing Class Vehicles at artificially inflated prices.

The Volkswagen RICO Enterprise.

128. Volkswagen conducted the affairs of an association-in-fact enterprise (the "Volkswagen RICO Enterprise") through a pattern of racketeering activity, in violation of 18 U.S.C. § 1962(c).

129. The enterprise engaged in and continues to engage in interstate commerce, and its activities affect interstate commerce.

130. The Volkswagen RICO Enterprise is an association-in-fact enterprise comprised of the Defendants and Volkswagen Authorized Dealers in the United States. Each participant in the Enterprise played a designated, well-defined role in the affairs of the Volkswagen RICO Enterprise.

131. Volkswagen designed, manufactured, and sold to Volkswagen Authorized Dealers the Class Vehicles containing the defeat devices that are the subject of this Complaint. Volkswagen developed the advertising campaigns that misrepresented to Plaintiffs and Class members the true nature of the Class Vehicles, which were not, contrary to Defendants' misrepresentations, environmentally-friendly, fuel-efficient, or EPA- or CARB-compliant. Volkswagen deceptively certified the Class Vehicles as EPA- and CARB-compliant. And Volkswagen lied to CARB and EPA officials about the full nature and extent of the problem.

132. The Volkswagen Authorized Dealers that sold and leased the Class Vehicles to Plaintiffs and members of the Class were a critical element of the Volkswagen RICO Enterprise. Volkswagen sold the Class Vehicles to Volkswagen Authorized Dealers, who then sold or leased

VW FOIA, EPA 06/20/2017 2017-FFP_030753

them to Plaintiffs and members of the Class. Whether or not the Volkswagen Authorized Dealers knew that the Class Vehicles contained defeat devices that made Volkswagen's advertisements and representations false, the Volkswagen Authorized Dealers displayed those advertisements and repeated those misrepresentations. Indeed, Volkswagen required Volkswagen Authorized Dealers to display and repeat those misrepresentations in the Volkswagen and Audi Standard Dealer Agreements.

133. The Volkswagen RICO Enterprise has an ascertainable structure and purpose beyond the scope and commission of Volkswagens' predicate acts and conspiracy to commit such acts. The Enterprise is separate and distinct from Defendants, and functions as a continuing unit. The members of the Enterprise have distinct and separate roles and responsibilities.

134. At all relevant times, Volkswagen operated, controlled or managed the Volkswagen RICO Enterprise. Volkswagen's participation was critical for the success of the scheme to defraud because Volkswagen manufactured the Class Vehicles, designed and installed the defeat devices, and concealed those devices from Plaintiffs, Class members and regulatory authorities.

135. Section 1961(1)(B) of RICO defines "racketeering activity" as any act indictable under 18 U.S.C. §§1341 (mail fraud) and 1343 (wire fraud), among other statutes. As described in this Complaint, Volkswagen's conduct violated both of these laws.

136. Volkswagen conducted the affairs of the Volkswagen RICO Enterprise through a "pattern of racketeering activity," as defined by 18 U.S.C. §1961(5) by committing at least two acts of racketeering activity, *i.e.*, indictable violations of 18 U.S.C. §§1341 and 1343, within the past ten years. In fact, Volkswagen has committed dozens of acts of racketeering activity. Each racketeering act was related, had a similar purpose, involved the same or similar participants and method of commission, had similar results and impacted similar victims, including the Plaintiffs and members of the Class.

137. Defendants' multiple acts of racketeering activity were related to each other and amount to continued racketeering activity, and therefore constitute a "pattern of racketeering

VW FOIA, EPA 06/20/2017 2017-FFP_030754

activity" as defined in 18 U.S.C. §1961(5).

Predicate Act Violations of 18 U.S.C. §§1341 and 1343.

138. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §1341 (mail fraud), placed in post offices and/or in authorized repositories, matter and things to be sent or delivered by the U.S. Postal Service, caused matter and things to be delivered by commercial interstate carriers, and received matter and things from the U.S. Postal Service and/or commercial interstate carriers, including, but not limited to, advertising materials, marketing and sales materials, correspondence, contracts, sales and leasing documents, Certificates of Compliance, communications with the EPA, CARB and other regulatory officials, and other materials relating to the Class Vehicles sold and leased to Plaintiffs and Class members.

139. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §1343 (wire fraud), transmitted and received by wire, matter and things, which include, but are not limited to, advertising materials, marketing and sales materials, correspondence, contracts, sales and leasing documents, Certificates of Compliance, communications with the EPA, CARB, and other regulatory officials, and other materials relating to the Class Vehicles sold and leased to Plaintiffs and Class members.

140. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §§1341 and 1343, made numerous material misrepresentations about the Class Vehicles' environmental impact, fuel efficiency, and EPA- and CARB-compliance, and made many material omissions of fact, including concealing that the cars contained defeat devices that rendered them non-compliant with applicable emissions standards. Volkswagen made these misrepresentations and omissions with the intent and effect of inducing Plaintiffs to rely on such misrepresentations and omissions.

141. Defendants' misrepresentations, omissions of material facts, acts of concealment, and failures to disclose, were knowing and intentional, and made for the purpose of deceiving

VW FOIA, EPA 06/20/2017 2017-FFP_030755

Plaintiffs and Members of the Class into purchasing and leasing Class Vehicles.

142. Defendants either knew or recklessly disregarded the fact that the misrepresentations and omissions described above and incorporated herein were material, and Plaintiffs and Class members relied on the misrepresentations and omissions as set forth above.

143. Volkswagen's affirmative and deliberate misrepresentations regarding the Class Vehicles' environmental friendliness, fuel efficiency and performance, and omission of the true facts, were material factors in inducing Plaintiffs and Class members to purchase and lease the Class Vehicles. Plaintiffs and Class members relied on those misrepresentations and omissions and would have not purchased or leased the vehicles in their absence, or, at a minimum, would have paid significantly less than they did.

144. Each act of deception, as described in this Complaint, constitutes a violation of 18 U.S.C. §§1341 (mail fraud) or 1343 (wire fraud), and constitutes an act of "racketeering activity" as defined in 18 U.S.C. §1961(5).

145. As a result, Plaintiffs and Class members have been injured in their business and property within the meaning of 18 U.S.C. §1964(c). Plaintiffs' and Class members' damages include, but are not limited to: purchasing or leasing Class Vehicles that they would not otherwise have purchased or leased; paying more for Class Vehicles than they would have otherwise paid if they had known the true facts concerning the defeat devices; and purchasing Class Vehicles, the value of which has been severely diminished, thus reducing their residual and/or resale value.

146. Volkswagen's RICO violations directly and proximately caused injury to the business and property of Plaintiffs and Class members, and Plaintiffs and Class members are entitled to three times their actual damages, as well as injunctive and other equitable relief, plus their costs and reasonable attorneys' fees.

FOURTH CLAIM

Violation of the Magnuson-Moss Warranty Act (15 U.S.C.§ 2301 *et seq.*)

147. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

VW FOIA, EPA 06/20/2017 2017-FFP_030756

148. Plaintiffs and the Class bring this claim under the Magnuson-Moss Warranty Act, 15 U.S.C. § 2301 *et seq.*

149. The Class Vehicles are consumer products as defined in 15 U.S.C. §2301(1).

150. Volkswagen is a supplier and warrantor as defined in 15 U.S.C. §2301(4), (5).

151. Plaintiffs and the Class received written warranties as defined in 15 U.S.C. §2301(6)(A) and/or (B), which Volkswagen has breached.

152. Plaintiffs and the Class are "consumers" as defined in 15 U.S.C. §2301(3). They are consumers because they bought a Class Vehicle and are entitled to enforce both written and implied warranties.

153. Pursuant to 15 U.S.C. § 2310(e), Plaintiffs and the Class are not required to provide Defendants notice of this class action and an opportunity to cure until the time the Court determines the representative capacity of Plaintiffs pursuant to Fed.R.Civ.P. 23.

154. Volkswagen is liable to Plaintiffs and the Class pursuant to 15 U.S.C. § 2310(d)(l) because it breached its written warranties.

155. Further, in connection with the sale of the Class Vehicles, Volkswagen gave an implied warranty under the Act. As part of that implied warranty, Volkswagen warranted that the Class Vehicle complied with all applicable federal and state regulations, including emission regulations. Volkswagen breached the implied warranty of merchantability.

156. Plaintiffs and the Class are entitled to damages caused by Volkswagen's breaches of the warranties, including economic damages based upon either a return of Plaintiffs' and Class Members purchase price; and/or the difference between the price paid for the Class Vehicle as warranted and the actual value of the Class Vehicle as delivered, and consequential damages.

157. In addition, Plaintiffs and the Class are entitled to reasonable attorneys' fees and costs as determined by the Court.

VW FOIA, EPA 06/20/2017 2017-FFP_030757

FIFTH CLAIM

Violations of the Consumers Legal Remedies Act (California Civil Code § 1750 *et seq.*)

158. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

159. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

160. This cause of action is brought pursuant to the California Consumers Legal Remedies Act ("CLRA"), Civil Code §1750, *et seq*. Plaintiffs bring this action on their own behalf and on behalf of the California Subclass, all of whom are similarly situated consumers within the meaning of Civil Code §1781.

161. The acts and practices described in this Complaint were intended to result in the sale of goods, specifically a motor vehicle, in consumer transactions. Volkswagen has violated, and continue to violate California Civil Code § 1770, subdivisions (a)(9), (a)(7), (a)(16), and (a)(5) by:

- Representing to consumers purchasing the Class Vehicles that these vehicles' emissions, fuel efficiency and high performance are as advertised and publicized.
- Representing in their advertising emissions, environmental, fuel efficiency and performance characteristics for the Class Vehicles that are false.

162. Plaintiffs Bourn, Watson, and Verner and the California Subclass members have suffered harm as a result of these violations.

163. Plaintiffs Bourn, Watson, and Verner and California Subclass members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Class Vehicles believing, based on Volkswagen's representations, that the Class Vehicles had certain characteristics that made them environmentally friendly, fuel efficient and high performance, when in fact these vehicles cannot have these fuel efficient and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Class Vehicles and the subsequent revelation

VW FOIA, EPA 06/20/2017 2017-FFP_030758

concerning the "defeat devices" will result in lower resale value.

164. Volkswagen concealed from Plaintiffs Bourn, Watson, and Verner accurate information concerning the emissions standards, fuel efficiency and performance of the California Subclass Vehicles.

165. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were intentional, or alternatively, made without the use of reasonable procedures adopted to avoid such errors.

166. Volkswagen, directly or indirectly, has engaged in substantially similar conduct with respect to Plaintiffs Bourn, Watson, and Verner and to each member of the California Subclass.

167. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, members of the consuming public will be further damaged by Volkswagen's conduct.

168. Plaintiffs Bourn, Watson, and Verner and the Class are entitled to equitable relief on behalf of the members of the California Subclass in the form of an order, pursuant to Civil Code §1780, subdivision (a)(2)-(5), prohibiting Volkswagen from continuing to engage in the above-described violations of the CLRA. Plaintiffs Bourn, Watson, and Verner and the California Subclass further seek reasonable attorneys' fees under Civil Code §1780(e).

SIXTH CLAIM

Violation of California Unfair Competition Law (Cal. Bus. & Prof. Code § 17200, *et seq.*)

169. Plaintiffs Bourn, Watson, and Verner incorporate by reference each preceding and succeeding paragraph.

170. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

171. California Business & Professions Code §17200, *et seq.* prohibits acts of "unfair competition" which is defined by California Business & Professions Code § 17200 as including

VW FOIA, EPA 06/20/2017 2017-FFP_030759

any "any unlawful, unfair or fraudulent business act or practice ...."

172. Volkswagen has violated and continues to violate California Business & Professions Code §17200's prohibition against engaging in "unlawful" business acts or practices, by, inter alia, the following:

- Violating the CAA and applicable regulations;
- Violating California's Air Pollution Control laws and applicable regulations;
- Violating the Sherman Act;
- Violating RICO;
- Violating the Magnuson-Moss Act;
- Violating the CLRA; and
- Violating California's False Advertising Law.

173. Volkswagen also acted fraudulently and unfairly for purposes of section 17200. Volkswagen's misrepresentations and omissions regarding the Class Vehicles' emissions, environmental standards, fuel efficiency, and performance in their advertising, public statements and marketing were a material factor in inducing Plaintiffs Bourn, Watson, and Verner to purchase their Class Vehicle. Plaintiffs Bourn, Watson, and Verner suffered injury in fact and lost money and/or property as a result of Volkswagen's unlawful business acts and practices and California Subclass members have suffered harm when each was required to pay a purchase price for their Class Vehicles which they never would have purchased if the true facts were known; or paid a price in excess of what a California Subclass member would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics and in the form of decreased resale value of the Vehicles.

174. As a result of Volkswagen's violations of the California Business & Professions Code §17200, *et seq.*, Plaintiffs Bourn, Watson, and Verner and California Subclass members are entitled to equitable relief in the form of full restitution for the inflated sale price of the Vehicles.

VW FOIA, EPA 06/20/2017 2017-FFP_030760

175. Plaintiffs Bourn, Watson, and Verner and California Subclass members also seek an order enjoining Volkswagen from continuing their unlawful business practices and from such future conduct.

SEVENTH CLAIM

Violation of the California False Advertising Law (Cal. Bus. & Prof. Code § 17500, *et seq.*)

176. Plaintiffs Bourn, Watson, and Verner incorporate by reference each preceding and succeeding paragraph.

177. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

178. Volkswagen violated California's False Advertising Law, Business & Professions Code §17500, *et seq.*by using false and misleading messages regarding the environmental friendliness, emissions, fuel efficiency and performance of the Class Vehicles in television, print, and Internet advertising.

179. These representations and/or omissions have deceived and are likely to deceive Plaintiffs Bourn, Watson, and Verner, the California Subclass, and consumers across the country in connection with their decision to purchase Class Vehicles. Volkswagen's representations and/or omissions were material and constituted a substantial and material factor in Plaintiffs Bourn and Watson's decision to purchase their Class Vehicle. Had Plaintiffs Bourn, Watson, and Verner known the actual facts, they would not have purchased the Class Vehicles and/or paid more than they would have had Volkswagen accurately disclosed the Class Vehicles' true characteristics.

180. Volkswagen directly and indirectly, has engaged in substantially similar conduct with respect to each Plaintiff and to each member of the California Subclass.

181. Plaintiffs Bourn, Watson, and Verner suffered injury in fact and lost money and/or property as a result of Volkswagen's false and misleading advertising and California Subclass members suffered harm when each was required to pay a purchase price in excess of what a

VW FOIA, EPA 06/20/2017 2017-FFP_030761

California Subclass member would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics and in the form of decreased resale value of the Class Vehicles.

182. As a result of Volkswagen's violations, Plaintiffs Bourn, Watson, and Verner and California Subclass members are entitled to equitable relief in the form of full restitution of all monies paid for the sales price of the Vehicles, diminished value of the Class Vehicles, and/or disgorgement of the profits derived from Volkswagen's false and misleading advertising.

183. Plaintiffs Bourn, Watson, and Verner also seek an order enjoining Volkswagen from such future conduct.

EIGHTH CLAIM

Violation of the Virginia Consumer Protection Act (Va. Code Ann. §§59.1-196, *et seq.*)

184. Plaintiff Schumacher incorporates by reference each preceding and succeeding paragraph.

185. Plaintiff Schumacher brings this Claim on behalf of the Virginia Subclass, which is cognizable in this Court pursuant to *Shady Grove Orthopedic Assocs., P.A. v. Allstate Ins. Co.*, 559 U.S. 393 (2010).

186. Defendants are "persons" within the meaning of Va. Code Ann. §59.1-200(A).

187. Volkswagen violated the Virginia Consumer Protection Act, which prohibits "...(5) misrepresenting that goods or services have certain quantities, characteristics, ingredients, uses, or benefits; (6) misrepresenting that goods or services are of a particular standard, quality, grade, style, or model; ... (8) advertising goods or services with intent not to sell them as advertised ...; [and] (14) using any other deception, fraud, false pretense, false promise, or misrepresentation in connection with a consumer transaction[.]" Va. Code Ann. §59.1-200(A).

188. These representations and/or omissions have deceived and are likely to deceive Plaintiff Schumacher, the Virginia Subclass, and consumers across the country in connection with their decision to purchase Class Vehicles. Volkswagen's representations and/or omissions were material and constituted a substantial and material factor in Plaintiff Schumacher's decision to

VW FOIA, EPA 06/20/2017 2017-FFP_030762

purchase their Class Vehicle. Had Plaintiff Schumacher and Virginia Subclass members known the actual facts, they would not have purchased the Class Vehicles and/or would have paid less for them.

189. Volkswagen, directly and indirectly, has engaged in substantially similar conduct with respect to each Plaintiff and to each member of the Virginia Subclass.

190. Plaintiff Schumacher and Virginia Subclass members suffered injury in fact and lost money and/or property as a result of Volkswagen's Violations of the Virginia Consumer Protection Act. Plaintiff Schumacher and Virginia Subclass members suffered harm when each was required to pay a purchase price in excess of what they would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics; they also suffered harm in the form of decreased resale value of the Class Vehicles.

191. As a result of Volkswagen's violations, Plaintiff Schumacher and Virginia Subclass members are entitled to three times the amount of actual damages or $1000, whichever is greater, as well as costs and attorneys' fees. Va. Code Ann. §§59.1-204(a), (b).

NINTH CLAIM
Unjust Enrichment

192. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

193. Plaintiffs bring this claim for unjust enrichment on behalf of the nationwide Class under the common law of unjust enrichment, as there are no true conflicts (case-dispositive differences) among various states' laws of unjust enrichment.

194. In the alternative, Plaintiffs bring this claim on behalf of the nationwide Class under Virginia law, because the Defendants' United States operations are headquartered in Virginia and Virginia has the most significant relationship to the issues and facts relevant to this claim.

195. Volkswagen received and retained a benefit from the Plaintiffs and inequity has resulted.

196. Volkswagen benefitted through its unjust conduct, by selling Class Vehicles subject

VW FOIA, EPA 06/20/2017 2017-FFP_030763

to the misrepresentation that they were EPA- and/or CARB-compliant and by failing to disclose its use of a defeat device in these vehicles.

197. Plaintiffs, were charged a premium based on this misrepresentation, overpaid for these vehicles as a result, and/or would not have purchased these vehicles at all had their noncompliance with federal and state emissions laws been disclosed.

198. It is inequitable for Volkswagen to retain these benefits.

199. Plaintiffs do not have an adequate remedy at law.

200. As a result of Volkswagen's conduct, the amount of its unjust enrichment should be disgorged, in an amount to be proven at trial.

TENTH CLAIM
Unjust Enrichment

201. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

202. Plaintiffs bring this claim for unjust enrichment on behalf of the nationwide Class under the common law of fraudulent concealment, as there are no true conflicts (case-dispositive differences) among various states' laws of fraudulent concealment.

203. In the alternative, Plaintiffs bring this claim on behalf of the nationwide Class under Virginia law, because the Defendants' United States operations are headquartered in Virginia and Virginia has the most significant relationship to the issues and facts relevant to this claim.

204. Volkswagen concealed and suppressed the material facts that the Class Vehicles did not comply with federal and state emissions laws and were spewing illegal amounts of NOx when they were represented to be EPA- and/or CARB-compliant. It also concealed and suppressed the material fact that the Class Vehicles were equipped with a defeat device that prevented their proper testing under laboratory conditions for compliance with federal and state emissions laws and regulations.

205. Volkswagen took the various steps described herein to effectuate that concealment, such as false advertising and in false statements of compliance with federal and state emissions

VW FOIA, EPA 06/20/2017 2017-FFP_030764

laws and regulations affixed to each of the Class Vehicles

206. Volkswagen took steps to ensure that its employees did not reveal these concealed facts to federal and state environmental regulators.

207. Volkswagen had a duty to disclose the concealed information because it:

- Had exclusive and/or far superior knowledge and access to the facts than Plaintiffs and Class Members, and it knew the facts were not known to or reasonably discoverable by Plaintiffs and the Class;
- Intentionally concealed the foregoing from Plaintiffs; and
- Made incomplete representations about the compliance of the Class Vehicles with federal and state emissions laws and regulations, while purposefully withholding material facts from Plaintiffs that contradicted these representations.

208. These omitted and concealed facts were material because they would be relied on by a reasonable person purchasing, leasing or retaining the Class Vehicles, and because they directly impact the price paid for the Class Vehicles and their resale value. Whether the Class Vehicles comply with federal and state emissions laws and regulations is a material concern to a consumer. Plaintiffs and Class Members trusted Volkswagen not to sell or lease them vehicles that were non-compliant.

209. Volkswagen concealed and suppressed these material facts to falsely assure purchasers and consumers that the Class Vehicles complied with federal and state emissions laws and regulations, as represented by Volkswagen and reasonably expected by consumers.

210. Volkswagen actively concealed and/or suppressed these material facts, in whole or in part, to protect its profits and to avoid recalls that would hurt the brand image of the Class Vehicles and cost Volkswagen money. Volkswagen concealed these facts at the expense of Plaintiffs and the Class.

211. Plaintiffs and the Class were unaware of these omitted material facts, and would not have acted as they did if they had known of the concealed and/or suppressed information.

VW FOIA, EPA 06/20/2017 2017-FFP_030765

212. Had they been aware of the non-compliance of the Class Vehicles with federal and state emissions laws and regulations and Volkswagen's callous disregard for those laws and regulations, Plaintiffs and the Class either would have paid less for their Class Vehicles or would not have purchased or leased them at all. Plaintiffs did not receive the benefit of their bargain as a result of Volkswagen's fraudulent concealment.

213. Because of the concealment and/or suppression of the facts, Plaintiffs and the Class sustained damage because they own vehicles that diminished in value as a result of Volkswagen's concealment of, and failure to timely disclose, the non-compliance of the Class Vehicles with federal and state emissions laws and regulations.

214. The value of all Class members' Class Vehicles has diminished as a result of Volkswagen's fraudulent concealment of the non-compliance of the Class Vehicles with federal and state emissions laws and regulations and has made any reasonable consumer reluctant to purchase any of the Class Vehicles, let alone pay what otherwise would have been fair market value for the vehicles.

215. Accordingly, Volkswagen is liable to the Class for their damages in an amount to be proven at trial.

216. Volkswagen's acts were done maliciously, oppressively, deliberately, with intent to defraud, and in reckless disregard of Plaintiffs' and the Class's rights and well-being, and with the aim of enriching Volkswagen. Volkswagen's conduct, which exhibits the highest degree of reprehensibility, being intentional, continuous, placing others at risk of death and injury, and affecting public safety, warrants an assessment of punitive damages in an amount sufficient to deter such conduct in the future, which amount is to be determined according to proof.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray that the Court enter judgment on their behalf and on behalf of the Class and the California and Virginia Subclasses, and:

A. Order the appointment of an independent External Compliance Monitor to monitor

VW FOIA, EPA 06/20/2017 2017-FFP_030766

Volkswagen's compliance with federal and state environmental laws;

B. Order Volkswagen to pay a portion of its annual net profits into an independent fund administered by third parties approved by the Court who can disburse the funds to non-profit organizations that seek to monitor, educate people about, and/or remediate the deleterious environmental effects of vehicular diesel fuel emissions;

C. Order that this action may proceed as a class action, with Plaintiffs as the designated Class representatives for the Class; Plaintiffs Bourn, Watson, and Verner as designated Class representatives for the California Subclass; Plaintiff Schumacher as designated Class representative for the Virginia Subclass, and Plaintiffs' counsel as Class and Subclass Counsel;

D. Adjudge and decree that Volkswagen has violated the CAA, California Pollution Control laws, the Sherman Act, RICO, the Magnuson-Moss Act, the CLRA, California's Unfair Competition Law, California's False Advertising Law; the Virginia Consumer Protection Act, and the common law of unjust enrichment and fraudulent concealment and that Plaintiffs and the members of the Class and the California and Virginia Subclasses have been injured in their business and property as a result of Volkswagen's violations;

E. Order that Plaintiffs and the members of the National Class and California Subclass recover damages sustained by them, to the extent provided by law, and that a judgment in favor of Plaintiffs and the Class and the California and Virginia Subclasses be entered against Volkswagen in an amount to be trebled in accordance with such laws;

F. To the extent provided by law, enjoin and restrain Volkswagen, its subsidiaries, affiliates, successors, transferees, assignees and the respective officers, directors, partners, agents, and employees thereof and all other persons acting or claiming to act on their behalf from continuing to violate the CAA, California Pollution Control laws, the Sherman Act, RICO, the Magnuson-Moss Act, CLRA, California's Unfair Competition Law, California's False Advertising Law, the Virginia Consumer Protection Act, and the common law of unjust enrichment and fraudulent concealment;

VW FOIA, EPA 06/20/2017 2017-FFP_030767

G. Order Volkswagen to pay restitution or damages to Plaintiffs and members of the Class and the California and Virginia Subclasses and to disgorge the profits unlawfully acquired and retained by Volkswagen;

H. Award Plaintiffs and members of the Class and the California and Virginia Subclasses pre-judgment and post-judgment interest, and order that such interest be awarded at the highest legal rate from and after the date of service of the initial complaint in this action;

I. Award Plaintiffs and members of the Class and the California and Virginia Subclasses their costs of this suit, including reasonable attorneys' fees as provided by law; and

J. Order such other or further relief as may be just and proper.

IX. JURY TRIAL DEMAND.

Pursuant to Federal Rule of Civil Procedure 38(b), Plaintiffs demand a trial by jury of all of the claims asserted in this Complaint so triable.

Subject: vw TDI diesel & emissions

Christopher Grundler

Director USEPA

Dear Sir,

As the owner of a 2012 Jetta SportWagon TDI I want to express my anger, disgust and great disappointment at VW for flat out lying about the engine's emissions compliance and the USEPA for not performing real road testing of the effected cars, both initially and later on a random basis. (EPA should be testing ALL vehicles this way!)

I expect VW to be required to retrofit the effected cars with the urea injection system to make them comply with the emission standards.

My purchase of this car (and my previous 2009 model) was based on:

1. its fuel economy,

2. its drivability & performance,

3. and its "clean" diesel technology's environmental compliance.

Reprogramming the car to reach compliance will decrease both its fuel economy and its performance and is simply not an acceptable option for me!

A quite Sincerely pissed off owner,

Ex. 6

Regulators Investigating 2nd VW Computer Program on Emissions

By DANIELLE IVORY and KEITH BRADSHER OCT. 8, 2015

WASHINGTON — Federal and California regulators have begun an investigation into a second computer program in Volkswagen's diesel cars that also affects the operation of the cars' emission controls.

Volkswagen said that it had withdrawn 2016 models of its diesel cars from environmental certification in the United States because the company should have disclosed the software and sought regulators' approval, but had not done so.

The disclosure of the software was made in testimony by the head of Volkswagen's American unit, Michael Horn, before a House Energy and Commerce subcommittee hearing, and later confirmed by the Environmental Protection Agency and the California Air Resources Board.

The software qualifies under state and federal laws as a so-called auxiliary emissions control device —

something that modifies the performance of emissions equipment. Volkswagen and regulators declined to say whether this software was intended to defeat emissions control tests, like the software that the automaker already admitted last month that it had installed in 11 million diesel cars since the 2009 model year.

"VW did very recently provide E.P.A. with very preliminary information on an auxiliary emissions control device that VW said was included in one or more model years," said Nick Conger, an agency spokesman. He added that federal and California regulators "are investigating the nature and purpose of this recently identified device."

Volkswagen is already struggling with the spiraling cost and growing damage to its image from last month's revelation that it had installed software to detect when a car was undergoing an emissions test and minimize harmful emissions. When not being tested, the cars would emit up to 40 times the allowable levels of pollution.

Volkswagen and regulators refrained from characterizing the second software program in any way. The automaker gave no indication of whether it was also devised to defeat emissions tests.

"In Volkswagen Group of America's recent discussions with the regulators, we described to the E.P.A. and C.A.R.B. that our emissions control strategy also included a software feature that should be disclosed to and approved by them," the automaker said.

Stanley Young, a spokesman for the California Air Resources Board, said the state agency was investigating the nature of the second device, but declined to provide specifics because Volkswagen's application "is still pending." Mr. Young said that while Volkswagen has withdrawn its 2016 application with federal regulators, it has not withdrawn the similar application filed with California regulators.

VW FOIA, EPA 06/20/2017 2017-FFP_030780

"We're still going through all the information they provided and determining the next step," he said.

Under normal circumstances, automakers are allowed to use the auxiliary emissions control devices under deals negotiated with regulators that provide for higher emissions in very specific circumstances (like going up a steep hill, or in very cold weather). But they must be disclosed.

Mr. Young said he could not comment on exactly when Volkswagen disclosed the existence of its auxiliary emissions control device, or A.E.C.D.

"What we don't know yet is if the 2016 A.E.C.D. is also a defeat device, or is a device that meets the guidance previously given by E.P.A.," said John German, a senior fellow specializing in emissions and efficiency technology at the International Council on Clean Transportation, the nonprofit group that first noticed that the real-world emissions of Volkswagen diesels in the United States were far above regulatory limits.

Federal regulators warned manufacturers of heavy-duty trucks in 1998 that it would strictly scrutinize any devices that interfered with the normal operation of emissions control equipment, after finding that they had installed systems similar to what Volkswagen disclosed last month in its diesel cars.

Dan Becker, the director of the Safe Climate Campaign at the Center for Auto Safety, a nonprofit Washington research group, said that Volkswagen's new admission was a potential violation of the law.

"They put it in their vehicles, and then they signed a certification petition to the regulator saying what they put in their vehicles and didn't mention it," he said. "It's certainly a material omission."

Lawmakers did not discuss Volkswagen's admission at length during the hearing. But Representative

VW FOIA, EPA 06/20/2017 2017-FFP_030781

Fred Upton, Republican of Michigan, openly wondered if Volkswagen was skirting regulations in other ways. "If they were willing to cut corners here, what else have they done?" he asked.

In addition to disclosing the second investigation in his opening testimony, Mr. Horn of Volkswagen laid out the automaker's plans to fix the cars currently affected and cautioned the panel that owners might have to wait a year or two.

Most of the more than 480,000 affected cars in the United States will need a "major fix," he said, including a hardware and software change. That repair, which would be applicable to almost 70 percent of those vehicles, may consume as much as 10 hours of work per car and might not get started until next year. The remaining vehicles are expected to be fixed next year, he said.

"This is pretty shocking for people," said Representative Jan Schakowsky, a Democrat of Illinois, expressing dismay at the scandal and demanding a specific timeline for fixes. "Asking customers for patience is really just not sufficient."

Some lawmakers asked Mr. Horn why Volkswagen did not replace the vehicles — a costly proposition — and, although he emphasized repairs, he said Volkswagen might consider an option like a buyback.

"Our plan is not to buy back the inventory," he said. "Our plan is to fix the cars."

Although Mr. Horn apologized for the deception and even said he felt deceived by the scandal, he came under withering criticism for not delivering a concrete deadline for fixing most of the cars, and not providing more details about how the scheme was conceived or who was responsible.

In response to questioning by Representative Joe Barton, Republican of Texas, Mr. Horn said that

VW FOIA, EPA 06/20/2017 2017-FFP_030782

neither Volkswagen's supervisory board nor its top executives ordered the emissions deception. Instead, he attributed the decision to "a couple of software engineers who put this in for whatever reason."

After an incredulous Mr. Barton expressed doubts that top Volkswagen executives in Germany were unaware of the cheating before September, Mr. Horn did not argue.

"I agree it is very hard to believe," he said.

"This was not a corporate decision," Mr. Horn said. "This was something individuals did." His comments echoed recent statements by Volkswagen's new chief executive, Matthias Müller, who said that only a few employees at the company had been aware of the cheating.

Also on Thursday, German investigators searched Volkswagen's headquarters in Wolfsburg, Germany, and elsewhere. State prosecutors in Braunschweig said in a statement that they were looking for documents and data storage that would give them clues as to who might have been responsible for the decision to install the software that led to the emissions cheating.

Mr. Horn deflected demands by the House subcommittee for more information. He told lawmakers that, as the chief of Volkswagen's American unit, he could not make promises for Volkswagen headquarters to turn over documents. He noted that there were "quite a number of people above me."

Volkswagen has been asked to turn over documents to the committee by Tuesday.

In addition to Mr. Horn, two officials from the E.P.A. testified before the panel on Thursday, to a less hostile reception. One of them, Christopher Grundler, director of the Office of Transportation and Air Quality, acknowledged that the agency had failed to detect the cheating in the first place — it was found by

VW FOIA, EPA 06/20/2017 2017-FFP_030783

the International Council on Clean Transportation in conjunction with a laboratory at West Virginia University.

"We've learned from this episode, for sure," he said. "We wish we had found it sooner."

Danielle Ivory reported from Washington and Keith Bradsher from New York. Aaron M. Kessler contributed reporting from Washington and Melissa Eddy from Wolfsburg, Germany.

A version of this article appears in print on October 9, 2015, on page B1 of the New York edition with the headline: Regulators Investigating 2nd VW Emissions Program.

CLERK US DISTRICT COURT
ALEXANDRIA, VIRGINIA

IN THE UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF VIRGINIA
Alexandria Division

MARIA BOURN, DAVID WATSON, STEPHEN VERNER, and MARK SCHUMACHER, on behalf of themselves and all others similarly situated,

Plaintiffs,

v.

VOLKSWAGEN AG, VOLKSWAGEN OF AMERICA GROUP, INC., VOLKSWAGEN OF AMERICA, INC., AUDI OF AMERICA, LLC, and AUDI AG,

Defendants.

Case No. 1:15cv1295

JURY TRIAL DEMANDED

LOG/MSN

CLASS ACTION COMPLAINT

Plaintiffs Maria Bourn, David Watson, Steven Verner, and Mark Schumacher bring this action on their own behalf and on behalf of a class of similarly situated persons against Volkswagen AG ("VWAG"), Volkswagen of America Group, Inc. and Volkswagen of America, Inc. (collectively, "VWoA"), and Audi of America, LLC and Audi AG (collectively, "Audi").[1] Plaintiffs seek injunctive relief and to recover damages caused by Volkswagen's violations of Section 2 of the Sherman Antitrust Act (15 U.S.C. § 2), the Racketeer Influenced and Corrupt Organizations Act ("RICO") (18 U.S.C. § 1961 *et seq.*), the Magnuson-Moss Warranty Act (15 U.S.C. § 2301 *et seq.*), the common law of fraud and unjust enrichment. and the statutory laws of California and Virginia. Plaintiffs make the following allegations upon information and belief,

[1] Unless otherwise indicated herein, all of these defendants will be referred to collectively as "Volkswagen."

VW FOIA, EPA 06/20/2017 2017-FFP_030786

except as to those allegations pertaining to the named plaintiffs, which are made on personal knowledge.

I. NATURE OF THE ACTION.

1. Four years ago, Martin Winterkorn ("Winterkorn"), Volkswagen's former Chief Executive Officer ("CEO"), announced Volkswagen's goal to become the world's largest automaker. "By 2018," he told U.S. politicians gathered for the opening of a Volkswagen plant in Chattanooga, Tennessee, "we want to take our group to the very top of the global car industry."[2] With only a relatively small share of the gigantic United States market, Winterkorn's ambitious plan required a dramatic increase in sales in that market. And the way to increase sales here, Volkswagen decided, was to convince American consumers that its diesel-powered cars were a superior alternative, with better fuel efficiency, lower emissions, and uncompromised performance.

2. Between 2009 and September 18, 2015, Volkswagen aggressively marketed its so-called Clean Diesel Turbocharged Direct Injection ("TDI") light passenger vehicles in the United States, spending millions of dollars on print, television, internet and point-of-sale advertising aimed at convincing American consumers that its cars were environmentally-friendly, fuel-efficient, powerful, and reasonably priced. In order to increase its market share, Volkswagen's cars needed all those attributes to win over a skeptical American public. Compared with Europe, with its higher fuel costs, expensive cars and less stringent tailpipe emission standards, the United States market was a tough sell for diesel-powered passenger cars.

3. Until September 18, 2015, it looked as if Winterkorn's ambitious plan had succeeded. In July of 2015, Volkswagen surpassed Toyota Corporation ("Toyota") as the world's largest automaker, selling 5.04 million vehicles in the first six months of this year, compared to

[2] http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

VW FOIA, EPA 06/20/2017 2017-FFP_030787

Toyota's 5.02 million.[3]

4. As noted above, the United States was a key part of this global strategy. As reported in *Automotive News*:

> Back in 2007, the automaker vowed to crank up U.S. sales of its VW brand to 800,000 vehicles a year by 2018. It was a dizzying sum, requiring more than a tripling of its volume at that time. Many in the industry scoffed.
>
> But with steady precision, VW got the skeptics to take a second look. It launched a lower-priced, Mexico-made Jetta and built a plant in Chattanooga that began churning out a new Passat that better fit American tastes and budgets. VW sales doubled between 2009 and 2012, to nearly 440,000, lifting hopes that 800,000 was doable.[4]

By October 1, 2015, VWoA had reported sales of 264, 215 passenger vehicles in the United States through September 15, indicating that before the scandal that is the subject of this Complaint surfaced, it was expecting another excellent sales year.[5]

5. Unfortunately for American consumers, Volkswagen's success in capturing market share was based on a lie. On September 18, 2015, the United States Environmental Protection Agency ("EPA") and the California Air Resources Board ("CARB") both notified Volkswagen that it had violated federal and state laws and regulations by using a "defeat device"--software specifically intended to circumvent emission test procedures established by the EPA and by CARB. Those notices are attached as Exhibits 1 and 2 to this complaint.

6. Volkswagen's "defeat device" is a "sophisticated software algorithm"[6] that detects

---

[3] http://www.usatoday.com/story/money/2015/07/28/volkswagen-surpasses-toyota-worlds-largest-automaker-first-half-2015/30772509/.

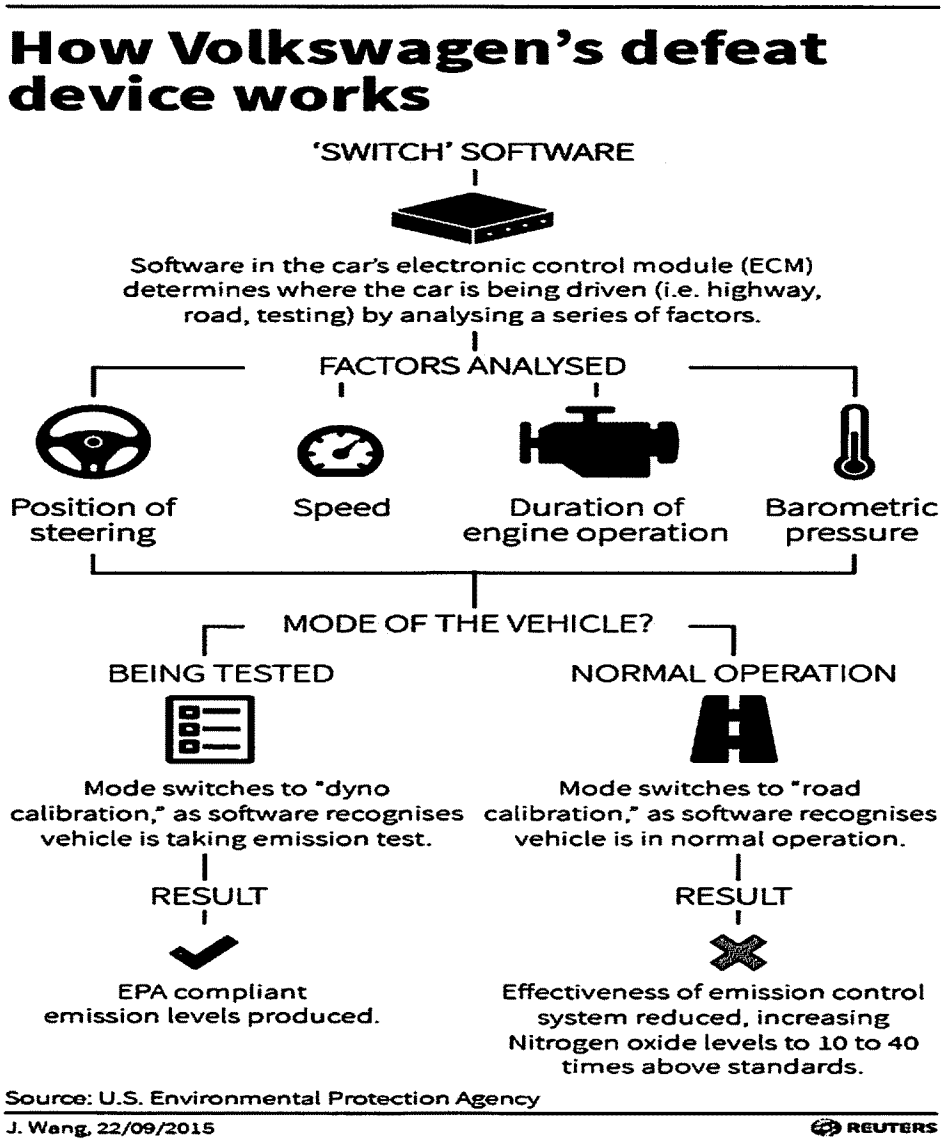
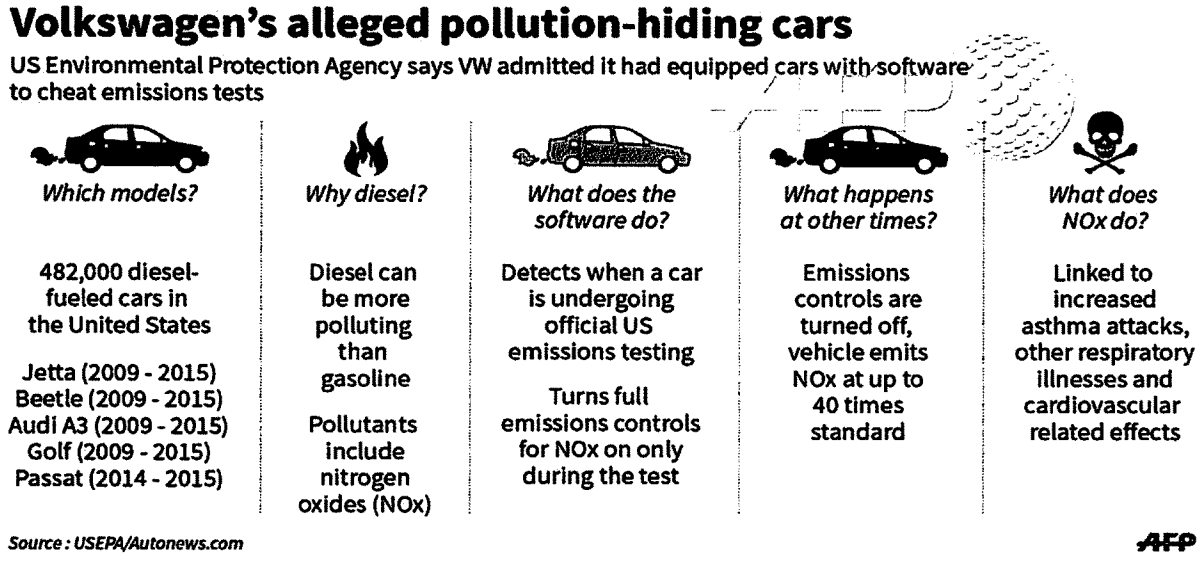
[6] http://www.theguardian.com/business/2015/sep/18/epa-california-investigate-volkswagen-clean-air-violations.

VW FOIA, EPA 06/20/2017 2017-FFP_030788

when the car is undergoing emissions testing. Under such laboratory test conditions, Volkswagen's vehicles pass the EPA and CARB emissions tests with flying colors. Under normal driving situations, however, the software algorithm ***turns off*** the emissions control systems, allowing the cars to spew as much as 40 times the allowable amount of pollutants--specifically nitrogen oxides ("NOx")--into the air. Elevated NOx contributes to the creation of ozone and smog, and is linked to asthma attacks, other respiratory diseases such as emphysema and bronchitis, and causes premature death. A diagram published in Reuters depicts its operation:



7. The chart below, published by *Agence France Press*, provides a useful and concise primer on the known facts:



8. As noted below, dozens of fatalities in the United States over the last seven years have been attributed to the illegal use of this "defeat device." The scandal has been popularly referred to as "Dieselgate."

9. Volkswagen has admitted to installing these "defeat devices" in 11 million diesel vehicles that have been sold around the world, including the 482,000 in the United States. As Michael Horn ("Horn"), the President and CEO of VWoA, candidly admitted: "[l]et's be clear about this. **Our company was dishonest. With the EPA, and the California Air Resources Board, and with all of you. And in my German words, we have totally screwed up.**"[7] (Emphases added). Horn further stated in a video on VWAG's website that **"[o]ur company**

[7] http://www.roadandtrack.com/new-cars/car-technology/news/a26774/volkswagen-ceo-we-screwed-up/. A YouTube video of this extraordinary concession can be found here: www.youtube.com/watch?v=Q6z8uUJE-jE.

betrayed the trust of you, our customers, our employees, our dealers and the public."[8] (Emphases added). And as VWAG has posted on its website: "[g]overnment regulations limit the use of engine software that reduces the effectiveness of a vehicle's emissions control systems. **Those are the 'defeat device' regulations, and regrettably, VW violated those regulations. We take full responsibility** – and deeply regret that this happened."[9] (Emphases added). In a September 23, 2015 press release available on VWAG's website, the Executive Committee of VWAG's Supervisory Board ("Board") stated: "[t]he Executive Committee takes this matter extremely seriously. **The Executive Committee recognizes not only the economic damage caused, but also the loss of trust among many customers worldwide.**"[10] (Emphases added). Or, as Berthold Huber ("Huber"), Deputy Chairman of the Board, was quoted as saying in a September 25 press release, **"[t]he test manipulations are a moral and political disaster for Volkswagen. The unlawful behavior of engineers and technicians involved in engine development shocked Volkswagen just as much as it shocked the public."** [11] (Emphases added).

10. In light of the scandal, VWAG's Board forced Winterkorn to resign as CEO of VWAG on September 23.[12] In doing so, he stated that **"I accept responsibility for the irregularities that have been found in diesel engines."** (Emphases added). [13] He further observed

[12] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html

[13] http://www.nytimes.com/2015/09/24/business/international/volkswagen-chief-martin-winterkorn-resigns-amid-emissions-scandal.html. Notably, however, Winterkorn plans to stay as the Chairman of the Board of Directors of Porsche Automobil Holding SE, which owns a 52% controlling stake in VWAG; he is also still demanding payment of the ten million Euros owed to him under his employment contract, which does not expire until 2016.

that "**[m]illions of people across the world trust our brands, our cars and our technologies. I am endlessly sorry that we have disappointed this trust. I apologize in every way to our customers, to authorities and the whole public for the wrongdoing.**"[14] (Emphases added). He professed surprise that "**misconduct on such a scale**" (emphases added) occurred within the Volkswagen group, suggesting that he had no knowledge of it.[15] It has been reported that Winterkorn was being investigated for fraud in connection with the conduct at issue here by prosecutors in Lower Saxony; however, more recently, those prosecutors have stated that any prosecution will await further factual information.[16]

11. Volkswagen has ordered its authorized dealers ("Volkswagen Authorized Dealers") to cease selling the vehicles in which the defeat devices are installed. These include at least the VW Jetta TDI (Model Years 2009-15), the VW Jetta SportWagen TDI (Model Years 2009-14), the VW Golf TDI (Model Years 2010-15), the VW Golf SportWagen TDI (Model Year 2015), the VW Beetle TDI and VW Beetle Convertible TDI (Model Years 2012-15), the VW Passat TDI (Model Years 2012-15) and the Audi A3 TDI (Model Years 2010-15).[17] These affected vehicles will be referred to in this Complaint as the "Class Vehicles."

12. Volkswagen's internal investigation has resulted so far in the suspension of three

VW FOIA, EPA 06/20/2017 2017-FFP_030792

executives: (a) Heinz-Jakob Neusser ("Neusser"); (b) Ulrich Hackenberg ("Hackenberg"); and (c) Wolfgang Hatz ("Hatz").[18] Spiegel Online described Hackenberg's departure, which was also typical of the others: "[h]e received news of his immediate suspension from the personnel department and was asked to turn in his company phone and leave his office. He has also been told not to set foot on company premises."[19]

13. None of these people are mere obscure midlevel engineers. Hackenberg is a VWAG Board member for Technical Development.[20] The same Spiegel Online article described Hackenberg as "a long-time confidant of Winterkorn and, up until just a few days ago, one of the most powerful men at VW." Hatz is a Porsche AG ("Porsche") Board of Management member in charge of Research and Development and is additionally Head of Engines and Transmissions Development for the Volkswagen Group.[21] Neusser was responsible for engine development at Porsche commencing in 1998 and drivetrain development commencing in 2011; in October of 2012, he succeeded Hatz as Head of Powertrain Development at the Volkswagen Group.[22]

14. The same Spiegel Online article notes that Hans-Dieter Pötsch ("Pötsch"), the VWAG Finance Chief and Board Chairman of VWAG, may also be under investigation by regulatory authorities. As discussed below, Volkswagen told the EPA about the use of a defeat device on September 3, but disclosed it publicly only on September 20. "[T]he finance chief

[18] http://uk.reuters.com/article/2015/09/29/uk-volkswagen-emissions-idUKKCN0RS0U620150929.

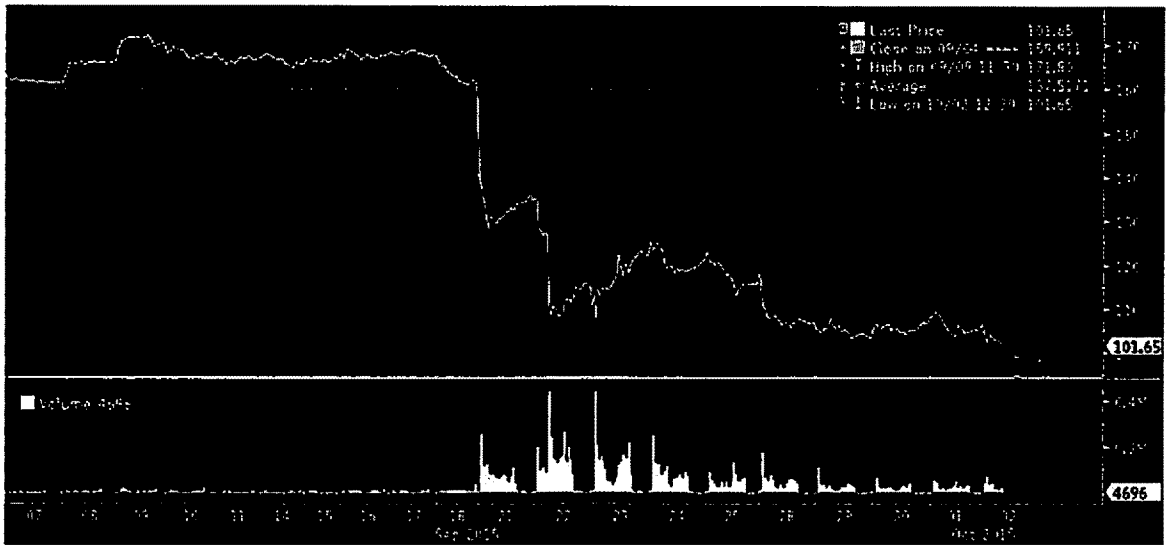
[20] http://www.audi.com/corporate/en/company/corporate-management/members-of-the-board/ulrich-hackenberg.html.

[21] http://press.porsche.com/more_about/executives/pag/hatz.php.

[22] http://www.volkswagenag.com/content/vwcorp/info_center/en/news/2012/09/Dr_Heinz_Jakob_Neusser.html.

remained silent for 17 days. During these 17 days, hundreds of thousands of investors bought VW stock. When the scandal was finally made public on Sept. 20, the price of VW shares plunged by 40 percent, costing stockholders €35 billion."[23] VWAG's shares have been on a steady decline ever since, as reflected in this graphic from the *Telegraph* in the United Kingdom:



15. According to an October 3 article from Reuters, "[a]t an internal company meeting this week at the VW headquarters in Wolfsburg, Pötsch described the situation as an 'existence-threatening crisis for the company', Germany's Welt am Sonntag reported in a release ahead of Sunday's publication."[24]

[23] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html.

[24] http://mobile.reuters.com/article/idUSKCN0RX0GQ20151004. Pötsch's accession to the VWAG Board has been criticized. Hans-Christoph Hirt, a director of Hermes Equity Ownership Services, an adviser to pension fund investors in companies including Volkswagen, said the appointment created a "serious conflict of interest": "[Pötsch] was a key VW executive for more than a decade and under German law the management board has a collective responsibility . . . The lawyers will surely demand that he recuse himself from any supervisory board meetings when management's role is discussed."

16. As explained below, and contrary to the suggestions of some of Volkswagen's spokespersons, the unlawful conduct here was not the action of renegade lower-level employees. It was instead the product of a concerted scheme by top executives at Volkswagen to save costs through use of the TDI technology, break into the United States diesel passenger car market by concealing from regulators and the public the inability of cars using that technology to meet federal and state emissions standards, market the TDI cars through an elaborate seven-year long campaign of false advertising and lying to state and federal officials, and thereby obtain a monopoly share of the United States Clean Diesel passenger car market.

17. The German periodical *Bild am Sonntag* revealed that Robert Bosch GmbH ("Bosch"), the supplier of some components of the emissions control system, used by Volkswagen in TDI diesel vehicles, also supplied Volkswagen with diesel software for test purposes. Bosch reportedly told VWAG in 2007 that using that software in vehicles on the road would be illegal.[25] Similarly, *Süddeutsche Zeitung* has reported that Neusser had ignored least one Volkswagen engineer's warnings over "possibly illegal" practices in 2011.[26] Spiegel Online reported that groups within Volkswagen knew of potential issues as far back as 2005 or 2006.[27] Olaf Lies, a VWAG Board member, has stated publicly that **"[t]hose people who allowed this to happen, or who made the decision to install this software--they acted criminally. They must take personal responsibility**."[28] (Emphases added).

---

http://www.cnbc.com/2015/10/04/volkswagens-uniquely-awful-governance-at-fault-in-emissions-scandal.html.

[25] http://www.autonews.com/article/20150927/COPY01/309279989/bosch-warned-vw-about-illegal-software-use-in-diesel-cars-report-says.

[28] http://www.bbc.com/news/business-3439.7426.

18. As discussed in further detail below, Volkswagen has set aside the inadequate sum of 6.5 billion Euros (approximately $7.2 billion) to deal with the fallout from this fraud. Numerous countries across the world are investigating the matter and here, in the United States, probes are being conducted by the United States Department of Justice ("DOJ"), a coalition of state attorneys general ("AGs"), and members of the United States House of Representatives. The EPA has ordered a recall.

II. THE PARTIES.

A. Plaintiffs.

19. Plaintiffs Maria Bourn ("Bourn") and David Watson ("Watson") are residents of South San Francisco, California. Bourn is a lawyer in San Francisco. Watson is a teacher. In 2015, Bourn and Watson, who are married, purchased a certified, pre-owned 2010 Model Year Jetta SportsWagen from Stevens Creek Volkswagen in San Jose, California. Stevens Creek Volkswagen is a Volkswagen Authorized Dealer. Plaintiffs purchased the SportsWagen in reliance on Volkswagen's representations that the car was an environmentally-friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. They would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

20. Plaintiff Mark Schumacher ("Schumacher") resides in Gainesville, Virginia. In 2012, he purchased a 2012 Model Year Volkswagen Passat SE TDI. Schumacher purchased the Passat from Lindsay Volkswagen in Sterling, Virginia. That company is a Volkswagen Authorized Dealer.Plaintiff Schumacher purchased the Passat in reliance on Volkswagen's representations that the car was an environmentally-friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. He would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

21. Plaintiff Stephen Verner ("Verner") is an architect and resident of Oakland,

VW FOIA, EPA 06/20/2017 2017-FFP_030796

California. In 2013, he purchased a TDI Golf four door from Royal Motor Sales in San Francisco, California. Royal Motor Sales is an Authorized Volkswagen Dealer. Verner purchased the Golf in reliance on Volkswagen's representations that the car was an environmentally friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. He would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

B. Defendants.

22. Defendant VWAG is a car corporation organized and existing under German law, with its principal place of business in Wolfsburg, Germany. VWAG is the parent company of Defendants VWoA and Audi.

23. Defendant Audi AG is a car corporation organized and existing under German law, with its principal place of business in Ingolstadt, Germany. Audi was created when VWAG merged two of its companies, Auto Union and NSU Motorenwerke AG. Audi is a 99.55%-owned subsidiary of the Volkswagen Group. Audi is now Volkswagen's luxury vehicle brand, and uses the slogan "Truth in Engineering".

24. Defendant the Volkswagen Group of America, Inc. is a corporation organized and existing under New Jersey law. Its headquarters are in Herndon, Virginia. The Volkswagen Group of America, Inc. is a wholly-owned subsidiary of VWAG. It is one of the world's largest producers of passenger cars. It sells the Beetle, Beetle Convertible, CC, Eos, e-Golf, Golf, Golf GTI, Golf SportWagen, Jetta, Passat, Tiguan, and Touareg vehicles through Volkswagen Authorized Dealers located in the United States. Volkswagen Group of America, Inc.'s operations in the United States include research and development; parts and vehicle processing; parts distribution; sales, marketing and service offices; financial service centers; and manufacturing.

25. Defendant Volkswagen of America, Inc. is owned and operated by the Volkswagen Group of America, Inc. and sells Volkswagen vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

VW FOIA, EPA 06/20/2017 2017-FFP_030797

26. Defendant Audi of America, LLC is a subsidiary of Audi AG that sells Audi vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

III. JURISDICTION AND VENUE.

27. This Court has jurisdiction over this action pursuant to 28 U.S.C. §§ 1331, 1332(d), 1337(a) and 1367. This court also has supplemental jurisdiction pursuant to 28 U.S.C. §1367(a).

28. Venue is proper in this judicial district and in the Alexandria Division thereof pursuant to 15 U.S.C. §§ 15 and 22, and 28 U.S.C. § 1391(b) and (c), in that at least one of the Defendants resides in this judicial district, is licensed to do business or is doing business in this judicial district.

IV. TRADE AND COMMERCE.

29. Approximately 482,000 Class Vehicles have been sold or leased in the United States in a continuous and uninterrupted flow of interstate commerce and foreign commerce during the last seven years, including through and into this judicial district. The business activities of the Defendants substantially affected interstate trade and commerce in the United States and caused antitrust injury in the United States.

V. FACTUAL ALLEGATIONS.

A. Automobile Emissions Regulations in the United States.

30. Congress enacted the first major Clean Air Act ("CAA") and established the EPA in 1970. The CAA, amended in 1975 and 1990, requires vehicle manufacturers to certify to the EPA that their cars and trucks will meet applicable federal emission standards.[29] The EPA administers a certification program to ensure that every vehicle complies with its emission standards. EPA-issued certificates of conformity are required for every vehicle sold in the United States, and the EPA must approve every vehicle entering United States commerce. In these

[29] http://www2.epa.gov/laws-regulations/summary-clean-air-act.

VW FOIA, EPA 06/20/2017 2017-FFP_030798

certification efforts, the EPA relies on test data submitted by automobile manufacturers, which submit the vehicles to the agency's testing procedures in their own laboratories. The EPA audits a small fraction of the new vehicles each year to ensure compliance.[30]

31. The Class Vehicles, like any other car sold in the United States, were required to satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. §86.1811-4; Clean Air Act §101(b)(1) – (2), 42 U.S.C. §7401(b)(1)(2).

32. Section 203(a)(3)(b) of the CAA prohibits the manufacture, selling, or installation of any device that bypasses, defeats or renders inoperative a required element of a vehicle's emissions control system. 42 U.S.C. §7522(a)(3)(b). Section 203(a)(10 of the same statute also prohibits the sale of motor vehicles or engines that are not covered by valid certificates of conformity with applicable emissions standards. 42 U.S.C. §7522(a)(1). The regulatory requirements for defeat devices are set forth in 40 C.F.R. Part 86.

33. The EPA has been rigorous in punishing automobile manufacturers or engine makers that utilize defeat devices. For example, in late 1995, it entered into a $45 million dollar settlement with General Motors Corporation regarding the use of defeat devices on 470,000 Cadillac cars.[31] Likewise, in August of 1998, it fined Honda $267 million and Ford $7.8 million for selling vehicles equipped with defeat devices that prevented emission control systems from working properly.[32] Similarly, in October of that year, it and the DOJ fined seven truck and heavy duty equipment manufacturers $83.4 million for engaging in similar conduct.[33]

---

[30] http://www.autonews.com/article/20151004/OEM11/310059955/vw-emissions-violations-put-self-certification-under-new-scrutiny.

[31] http://www.autosafety.org/sites/default/files/imce_staff_uploads/Cadillac%20%2445%20Million%20Defeat%20Device%20Penalty%2011-31-95.pdf.

[32] http://www.autosafety.org/sites/default/files/imce_staff_uploads/defeat.pdf

[33] http://www2.epa.gov/enforcement/cummins-engine-company-diesel-engine-clean-air-act-settlement.

VW FOIA, EPA 06/20/2017 2017-FFP_030799

34. Volkswagen was or should have been aware of these precedents. Indeed, the company itself is a recidivist violator of the CAA. In July of 1973, the EPA referred to DOJ for legal action a claim that defeat devices were installed on 1973 Volkswagens. A copy of that referral is attached as Exhibit 3 to this complaint. The matter was settled for $120,000 in March of 1974.[34] Similarly, in June of 2005, Volkswagen entered into a consent decree with DOJ whereby it paid a $1.1 million penalty concerning its failure to notify the EPA of emissions defects in certain vehicles manufactured at its facility in Mexico.[35] A copy of that decree is attached as Exhibit 4 to this Complaint.

35. CARB is a department of the California Environmental Protection Agency. It was created in 1967. California is the only state permitted to have such a regulatory agency, because it was created prior to the enactment of the CAA. CARB's mission is to "[t]o promote and protect public health, welfare and ecological resources through the effective and efficient reduction of air pollutants while recognizing and considering the effects on the economy of the state."[36]

36. The EPA introduced phased in Tier 2 emissions standards from 2004 to 2009. California has similar standards in its CA LEV II standard. The Tier 2 Bin rating system applied to all passenger vehicles regardless of fuel type. Tier 2 Bin 5 standards--the ones applicable to the Class Vehicles--imposed an emission rate for NOx of 0.07 grams per mile.[37]

37. New cars that are sold bear stickers indicating that they are EPA-and/or CARB compliant. Here is a photograph of such a sticker on the inside of the hood of a TDI Audi A3, one of the Class Vehicles.

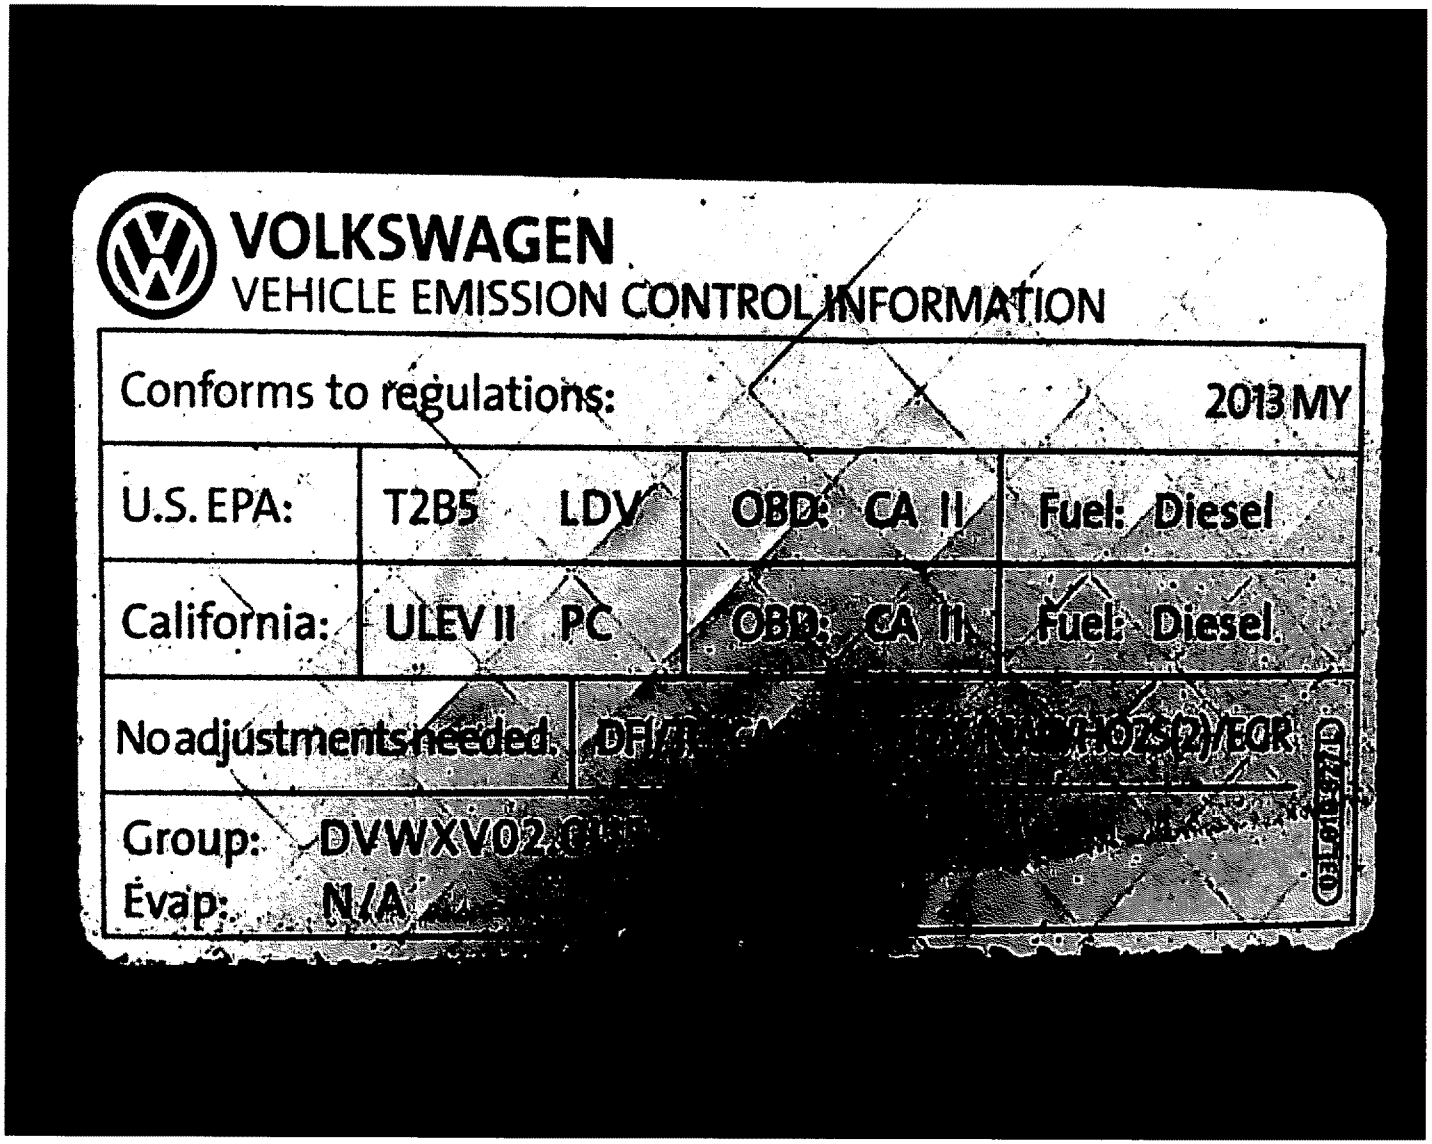
And here is a similar sticker for a 2013 TDI Volkswagen Golf:

//

//

//



VOLKSWAGEN
VEHICLE EMISSION CONTROL INFORMATION

Conforms to regulations:			2013 MY
U.S. EPA:	T2B5 LDV	OBD: CA II	Fuel: Diesel
California:	ULEV II PC	OBD: CA II	Fuel: Diesel
No adjustments needed.	DFI/TC/CAC/DOC/CPF/SCR/EGR		
Group: DVWXV02			
Evap: N/A			

Through these types of notice, Volkswagen was representing to customers that the Class Vehicles complied with federal and state emissions laws. This was an outright lie.

B. Diesel Cars And Control of NOx Emissions.

38. Diesel-powered cars, like gasoline-powered cars, must also meet the emissions standards established by the EPA and CARB. With diesel-powered engines, car manufacturers must use different--and more expensive--emission control systems than are used in gasoline-powered cars.

39. Diesel fuel has a greater energy density than gasoline. It converts heat into energy more efficiently than gasoline, sending less heat out of the tailpipe than gas-powered vehicles. Because it has greater energy density, diesel also is more efficient: diesel vehicles can get up to 30% more miles per gallon than similar gasoline-powered cars. In addition, because of their higher compression, diesel engines can generate a lot of torque, providing strong acceleration and additional power needed for towing.

40. While diesel vehicles have certain advantages over gasoline, they also have some disadvantages. Because diesel fuel is heavier and oilier than gasoline, it can generate more pollution. While diesel engines emit lower amounts of carbon monoxide than gasoline-powered engines, they emit more NOx.

41. Diesel fuel exhaust has been recognized by the World Health Organization to be a carcinogen for humans.[38]

42. Automakers have faced significant challenges in controlling NOx emissions sufficiently to meet environmental standards, particularly with smaller vehicles, and particularly in the United States, which has some of the strictest emission controls in the world. The website of greencongress.com explains the two types of approaches diesel automobile manufacturers have used to deal with NOx emissions:

[38] http://www.iarc.fr/en/media-centre/pr/2012/pdfs/pr213_E.pdf.

VW FOIA, EPA 06/20/2017 2017-FFP_030803

> Broadly, there have been two catalytic approaches used to reduce exhaust NO_x: urea-based selective catalytic reduction (SCR) and lean NO_x trap (LNT) catalysts.
>
> --The urea-SCR (urea=AdBlue) approach requires on-board storage of the reductant fluid which is introduced into the exhaust upstream of the SCR catalyst. It is then converted to ammonia which interacts with NO_x on the SCR catalyst to form water and nitrogen.
>
> --LNT technology utilizes fuel from the vehicle and advanced engine controls to enable periodic operation of the engine at rich air-to-fuel ratios to produce oxygen-depleted exhaust suitable for reducing NO_x stored on the LNT catalyst surface.[39]

43. The article indicates that Volkswagen had planned to use both technologies as of 2007, but elected to go with the LNT approach (which it referred to as TDI). As explained below, the deciding factor was apparently cost. Because of the extra equipment (including a urea tank) and technology required to clean the NOx emissions from the diesel exhaust, SCRs can add significantly to the cost of producing the engine. They also make diesel cars heavier than they otherwise would be, thus potentially decreasing fuel efficiency, torque and power.

44. Honda, which sells diesel cars in markets other than the United States, never tried to sell them here. That is because, according to Honda's research, "[t]he market would not bear the costs of doing diesel correctly." In order to meet the stringent United States emissions standards, Honda would have had to add costly emissions controls to every diesel model, which would make them more expensive than gasoline-powered competitors. "At such a high premium, customers simply wouldn't buy them."[40]

C. Volkswagen's Decision To Use TDI Technology.

45. Volkswagen has been selling cars in the United States since 1949, when it introduced the iconic Volkswagen Beetle. Although it was for many years the top-selling imported car in the United States, Japanese imports overtook Volkswagen and other European imports in

---

[39] http://www.greencarcongress.com/2015/09/20150921-vw2l.html.

[40] http://mashable.com/2015/09/27/vw-dieselgate/#2VosDbcL7iqT.

the 1990s.

46. The decisive factor in the decision to use TDI technology in 2007-08 was the appointment of Winterkorn as CEO of VWAG in January of 2007. Winterkorn was involved in overseeing research and development and had that responsibility at the time he resigned as CEO. In 1995, he took over as the head of Volkswagen Group Product management and a year later, he assumed the role of Member of the Board of Management for "Technical Development" at the Volkswagen brand. He assumed a similar role when he became Chairman of the Board of Management at Audi.[41]

47. Before Winterkorn took over as VWAG's CEO on January in 2007, Volkswagen had partnered with Bosch and Daimler to explore the use of a diesel emissions control system called BlueTec.[42] BlueTec was a technology developed by the latter two companies and championed by Wolfgang Bernhard ("Bernhard"), former head of the Volkswagen brand and a former Daimler executive. BlueTec was an SCR technology; it required the use of a liquid urea tank, so that urea could be sprayed onto the emissions in order to neutralize the NOx. The urea tank not only takes up space and adds weight (disadvantages that are especially acute in the market for small, fuel-efficient cars), but also requires the owner to refill the tank, making the diesel engine more inconvenient than a traditional gasoline-powered car. When Bernhard left the company after Winterkorn took control, the BlueTec technology was scrapped for smaller vehicles. Volkswagen only began using a form of SCR technology on a few of its smaller vehicles in 2012.

48. *Automotive News* describes the sequence of events:

> *Bild am Sonntag* said the roots of the crisis were planted in 2005 when then-VW brand Chief Wolfgang Bernhard wanted VW to

---

[41] *See* http://www.volkswagenag.com/content/vwcorp/content/en/the_group/senior_management/winterkorn.html.

[42] For the source of this information, *see* http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

> develop a new diesel engine for the U.S. market. Bernhard recruited Audi engineer Rudolf Krebs who developed a prototype that performed well in tests in South Africa in 2006, the paper said.
>
> Bernhard and Krebs argued that the only way to make the engine meet U.S. emission standards was to employ in the engine system an AdBlue urea solution used on larger diesel models such as the Passat and Touareg, according to the report.
>
> This would have added a cost of 300 euros ($335 in today's U.S. dollars) per vehicle -- a sum that VW finance officials said was too much at a time when a companywide cost-cutting exercise was under way.
>
> Bernhard left VW in January 2007 before the diesel engine went into production. Krebs was moved to another role when Martin Winterkorn became VW Group and brand CEO in 2007.
>
> Winterkorn, Audi's former CEO, asked Audi development boss Ulrich Hackenberg and Audi engine boss Wolfgang Hatz to move to VW's Wolfsburg headquarters and continue development work on the engine, *Bild am Sonntag* said.
>
> The engine then ended up in VW Group diesels with its engine software manipulated to fool diesel emissions tests in the U.S.[43]

Hatz and Hackenberg, as noted above, were two of the executives whom VWAG recently suspended.

49. Engineers at Volkswagen had been looking at an alternative to BlueTec technology, an alternative that ultimately evolved into the TDI "Common Rail" system. In 2006, Richard Dorenkamp, head of Volkswagen's diesel engine development, gave a presentation in Detroit. He described the TDI system Volkswagen engineers developed and how it could be used in small cars and meet increasing US demands for fewer emissions.[44] Volkswagen's TDI Clean Diesel pollution

---

[43] http://www.autonews.com/article/20150927/COPY01/309279989/bosch-warned-vw-about-illegal-software-use-in-diesel-cars-report-says. Winterkorn was generally very concerned about the costs associated with developing eco-friendly automotive engines. As he said at the 2014 Paris auto show, "[c]limate protection is not available free of charge. Every gram of reduction in [tailpipe] C02 costs us 100 million euros. Every gram!" http://blog.caranddriver.com/vws-winterkorn-to-greens-so-get-off-our-backs-already/.

[44] http://www1.eere.energy.gov/vehiclesandfuels/pdfs/deer_2006/session7/2006_deer_dorenkamp.pdf.

control technology differed from the SCR technology used by other manufacturers to control NOx emissions. The greencarcongress.com article cited earlier describes it in detail. Instead of having a urea tank, the TDI Clean Diesel cars technology used a trap to collect NOx. While saving the space, weight and cost required by the urea tank in the SCRs, Volkswagen's TDI Clean Diesel technology--when it was operational--required additional use of fuel, thus degrading both gas mileage and performance. The trap was controlled by a computer module that could save fuel by allowing more pollutants to pass through the exhaust system.

50. In June of 2007, six months after Winterkorn took over as CEO of VWAG, Volkswagen issued a report entitled "Power Train and Fuel Strategy--The Path To The Future."[45] It stated:

> In the first stage on the path to this independence, it will be important to utilize existing fossil fuels as efficiently as technically possible. Volkswagen is putting its stamp on this phase with vehicles such as the BlueMotion models, a universally fuel-efficient fleet of TDI engines, highly efficient and unique TSI engines, successful natural gas vehicles (EcoFuel) and a lineup of models that still leaves room for automotive dreams. Very soon these fundamental technologies will be further refined. **New powertrains, including an engine concept developed for use in the USA, under the working title "BlueTDI", are already in the prototype stage. These engines will fulfill the toughest emissions laws in the world – even the so-called "Tier2 Bin5" in California, one of the most stringent emissions standards in the world.** (Emphases added).[46]

51. Volkswagen had planned to introduce the Jetta TDI Clean Diesel in the United States earlier than it eventually did. In November of 2007, it was reported as follows:

---

[45] It can be found at http://www.volkswagenag.com/content/vwcorp/info_center/en/themes/2007/06/powertrain_and_fuel_strategy.html.

[46] In 2008, five VWAG engineers published a two-part article in the May and June issues of *MTZ* magazine saying they had resolved the issue of how to best control emissions and could now meet California standards through the use in part of a new on-board diagnostics system. Similarly, Achim Freitag, a testing engineer in Volkswagen's diesel development department, touted the new engine in a speech given later that year. *See* http://www.pbs.org/wgbh/nova/next/tech/volkswagen-diesel-emissions/.

VW FOIA, EPA 06/20/2017 2017-FFP_030807

> A problem with the emissions system in Volkswagen's new Jetta TDI will delay the launch of the diesel sedan for about six months. The car is critical to VW's plans to get back on track in the United States.
>
> VW spokesman Keith Price confirmed that the delay will be announced this week at the Los Angeles auto show. Price would not give specifics about the technical problem, but he said it has been fixed.
>
> The technical changes engineers made to solve the problem mean the car must go through emissions testing and validation again, Price said.
>
> VW dealers have been without a new diesel car to sell since last spring. Production of the new model, which will be sold in all 50 states, was scheduled to start in January. The car will be built in Puebla, Mexico.
>
> U.S. sales originally were expected to begin in early spring, Price said. Now sales won't start until later in the summer."
>
> "Sure, they're disappointed," Price said of dealers who have learned of the delay.
>
> Price said there is a lot of pent-up demand from loyal VW diesel buyers for the next- generation Jetta, which has a new engine built in Germany and a new diesel fuel injection system.
>
> "They're disappointed, but they see the point that this car has to be perfect," Price said of the dealers, adding, "They recognize the importance of this not only for their stores, but for the VW brand."
>
> A fleet of about 40 Jetta TDIs is undergoing testing as part of the validation procedure.[47]

52. What apparently happened is that the TDI technology failed initially to withstand United States emissions testing. The decision was made to delay the launch of the vehicle and activate the algorithm that functioned as a defeat device in the software management system. This is consistent with the timing of the letter from Bosch described above that raised the illegality of such a tactic. It is also consistent with recent revelations that appeared in the October 4 issue of *Bild am Sonntag*:

---

[47] http://www.cleanmpg.com/forums/showthread.php?t=7254.

> An internal review at Volkswagen AG shows the decision to install software that reduces diesel emissions in testing was made just before serial production of the company's EA 189 engine [used in many of the Class Vehicles], German tabloid Bild am Sonntag said.
>
> Bild said the software was first installed in its diesel engines in 2008, shortly before the EA 189 was mass produced. The move was taken because there was no way at the time to reconcile meeting emission standards within the targeted cost of the engine, the tabloid said in an advance release of the article to be published Sunday. Otherwise the company would have had to abandon the introduction of the engine, development of which was begun in 2005, the newspaper said.[48]

53. The 2009 Model Year TDI Jetta was introduced and passed the Tier 2 Bin 5 emissions test with flying colors. A Reuters article describes its successful launch:

> Volkswagen had heavily marketed what it called "clean diesel" engines starting in 2008 with the 2009-model Jetta TDI. It appeared to have found a sweet spot between high-performance and fuel-efficiency with a zippy, fun-to-drive car that topped 40 miles per gallon in highway driving. Named "Green Car of the Year" at the Los Angeles auto show in 2008, the Jetta TDI was seen as a breakthrough in a country where diesel passenger cars occupy a tiny niche compared with Europe, where they are about half of the market.
>
> "It's not your grandfather's diesel," Krause said in a September 2008 presentation to U.S. regulators, according to a video of the remarks.
>
> [Norbert] Krause [head of VWoA's environmental office until 2009] and other VW officials promised a diesel that would meet pollution laws in all states, including California where diesel engines had long been associated with smog and cancer-causing soot.
>
> By that point, VW and other automakers had lobbied for almost a decade for regulators to give diesel another chance. In 2000, VW and other companies with an interest in promoting diesel, including Mazda, formed the Diesel Technology Forum to lobby for increased use in the United States as a way to reduce reliance on imported oil. In 2005, an energy bill signed by President George W. Bush offered tax credits for diesel buyers. That gave the first wave of diesel Jetta buyers an income tax credit of $1,300 each.

[48] http://www.marketwatch.com/story/vw-began-using-emissions-software-in-2008-report-2015-10-04.

> In 2009, after the new Jetta went on sale, VW dealers initially sold out, including in California where regulations had effectively shut the market to diesels earlier in the decade.[49]

54. As noted in the article, *Green Car Journal* gave it the 2009 Green Car of the Year award and gave the TDI Audi A3 the 2010 Green Car of the Year Award.[50] Those awards have been rescinded in light of the present scandal.[51] The TDI Clean Diesels were a resounding success and VWoA sold many units.[52] As recently as its 2014 sustainability report, VWAG crowed about how "[t]he Volkswagen Group has a long tradition of resolute commitment to environmental protection" and how it intended to "put our creative powers to good use for the benefit of the people and the environment."[53]

55. At conferences and in published papers, Volkswagen extolled the efficiency and low emissions of its Clean Diesel technology.[54] And commentators agreed. One stated that Volkswagen was "the only company to have mastered the new emissions regulations using a compact, inexpensive treatment system. It allowed them to roll out diesel engines in one small car after another at relatively low prices."[55] Volkswagen's competitors had long wondered how Volkswagen could produce a clean diesel engine at such an affordable price. As Robert Lutz,

[54] *See, e.g.*, http://www.sae.org/events/gim/presentations/2009/norbertkrause.pdf; http://cleandieseldelivers.com/media/Douglas-Skorupski-VWoA_DTF_March2015.pdf.

[55] http://www.pbs.org/wgbh/nova/next/tech/volkswagen-diesel-emissions.

former vice chairman of General Motors Corporation, recounted: "I kept asking our engineers: 'What's wrong with you guys? VW seems able to do it.' I said, 'Are they magicians or something?' The engineers said they couldn't answer that question."[56] Now, they have their answer. Volkswagen cheated.

56. The competitive advantages of cheating on emissions have now become clear. "Manipulating emissions results allowed Volkswagen to keep down engine costs in a 'clean diesel' strategy that was popular in Europe and at the heart of a drive to improve U.S. results."[57] As an article in the *New York Times* put it, "[d]isabling the emissions controls brought major advantages, including much better mileage--a big selling point in Volkswagen's push to dominate in America."[58] These sales were part of the reason VWAG was able to surpass Toyota as the world's biggest automaker in 2015, as noted above. And they were sales built upon lies.

57. This systemic attitude of winning at all costs in spite of noncompliance with national environmental regulations is part of the corporate culture of Volkswagen, as explained at length in a September 24, 2015 *New York Times* article:[59]

> There is a long tradition of scandal and skulduggery in the auto industry, but few schemes appear as premeditated as Volkswagen's brazen move to use sophisticated software to circumvent United States emissions standards.
>
> That such a thing could happen at Volkswagen, Germany's largest company and the world's largest automaker by sales — 202.5 billion euros last year — has mystified consumers and regulators around the world. But given Volkswagen's history, culture and

[56] http://www.freep.com/story/money/cars/2015/09/26/vw-cheat-emissions-diesel- engine-fallout/72612616/.

[59] http://www.nytimes.com/2015/09/25/business/international/problems-at-volkswagen-start-in-the-boardroom.html?_r=1.

corporate structure, the real mystery may be why something like this didn't happen sooner.

"The governance of Volkswagen was a breeding ground for scandal," said Charles M. Elson, professor of finance and director of the John L. Weinberg Center for Corporate Governance at the University of Delaware. "It was an accident waiting to happen." The company, founded by the Nazis before World War II, is governed through an unusual hybrid of family control, government ownership and labor influence. Even by German standards, "Volkswagen stands apart," said Markus Roth, a professor at Philipps-University Marburg and an expert in European corporate governance. "It's been a soap opera ever since it started."

****

I spoke this week to a longtime former senior Volkswagen executive, who agreed that a scandal, especially one involving emissions, was all but inevitable at Volkswagen. He cited the company's isolation, its clannish board and a deep-rooted hostility to environmental regulations among its engineers.

The former executive, who spoke on the condition of anonymity because he now works at a competing global automaker, said that Wolfsburg, where Volkswagen is based in Lower Saxony and the city with the highest per capita income in Germany, is even more remote and isolated than Detroit was in its heyday. "The entire economy is automotive," he said. "People have a completely uncritical view of cars and their impact on the environment because they all make a living from the industry."

****

The Volkswagen board has been especially slow to move on environmental issues, investing less in electric and hybrid engine technology than industry leaders.

"There's an attitude among the German public that it's very unfair for the U.S. to target the auto industry over emissions," Professor Roth said. "If you have electric cars and a coal-fired plant producing the electricity, you gain nothing."

The former Volkswagen executive said Volkswagen's engineer-driven culture takes the notion even further. He said the engineers felt that the politicians were guilty of rank hypocrisy, especially in the United States, also grumbling that electric cars make no sense as long as power plants are burning fossil fuels.

"There's an attitude of moral superiority there," he said. "The engineers think they know best."

That Volkswagen is nonetheless obliged to obey applicable

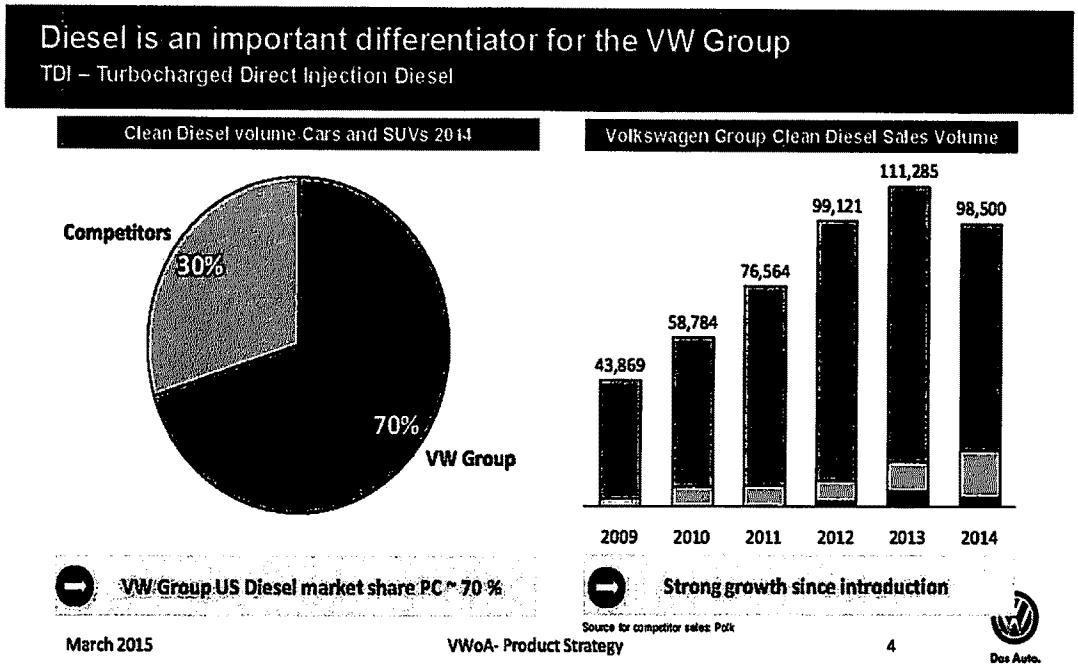
> environmental laws, he said, is a notion likely to fall on deaf ears in Wolfsburg, especially compared to demands to be No. 1 in sales. (The motive for the software evasion is widely believed to have been to increase sales of diesel-powered cars in the United States.)

Thus, executives and engineers at Volkswagen were clearly unhappy with United States automotive emissions standards and were all too willing to sacrifice those standards (and their obligations under United States antitrust laws) in order to ensure that their company became the number one automaker in the world. The current scandal involving Volkswagen Clean Diesel TDI vehicles is a direct result of that arrogant intention to flout United States environmental laws. It is also a direct result of what has been described by one German executive as Volkswagen's "uniquely awful" corporate governance.[60]

D. The Clean Diesel Car Market.

58. Volkswagen's illegal conduct in this country occurred in the Clean Diesel passenger car market in the United States (the "Clean Diesel Car Market"), which can be viewed as a market of its own or as a submarket of passenger cars sold in this country. This fact was confirmed in a presentation by Douglas Skorupski ("Skorupski"), Manager of Power Train Strategy for VWoA, given to the Diesel Technology Forum ("DTF") in March of 2015:

[60] http://www.cnbc.com/2015/10/04/volkswagens-uniquely-awful-governance-at-fault-in-emissions-scandal.html.



59. Thus, VWoA clearly views clean diesel cars as a distinct market and Volkswagen's TDI technology as a factor that allowed it to obtain a monopoly share of that market.[61] It distinguished Clean Diesel cars from gasoline/electric hybrid cars based on superior performance:

[61] The presentation can be found at http://cleandieseldelivers.com/media/Douglas-Skorupski-VWoA_DTF_March2015.pdf. Bosch has similarly identified a distinct Clean Diesel car category: http://www.low-carbonfuels.com/pdfs/acte2011presentations/Day1/Breakout1/LightDuty/ACT2011-Breakout1-FreitagAlexPresentation150.pdf. And the EPA has noted that "Clean diesel" refers to a three-part emissions control system that combines cleaner diesel fuel, advanced engines and effective emissions control technology.

"[o]ne way Volkswagen aimed to achieve its lofty goal was by betting on diesel-powered cars — instead of hybrid-electric vehicles like the Toyota Prius--promising high mileage and low emissions without sacrificing performance."[62] Similarly, a survey conducted by Strategic Vision for Volkswagen found that customers of diesel and hybrid vehicles are very different and there is "very little crossover from one to the other." [63] The same article noted that Clean Diesel TDI and hybrid buyers differed demographically; the latter were "were just 51 percent male, 78 percent of them were married, 89 percent had no kids in the household, and their average age was 61", while the former "included far more men than women[,] [f]ewer of them were married, but more of them had children in the house, and they were fully 17 years younger, with an average age of 44." Likewise, a Volkswagen Clean Diesel IQ survey found that diesel car customers are highly aware of the benefits of clean diesel technology in contrast to hybrid and gasoline car customers. Furthermore, 94% of diesel customers will purchase clean diesel cars again while only 26% of hybrid and gasoline car customers will consider clean diesel cars for their next purchase.[64] All of this indicates little cross-elasticity of demand between hybrid vehicles and Clean Diesel vehicles.

60. Indeed, the major European competitors of Volkswagen in the Clean Diesel Car Market belong, along with Volkswagen, to an organization that is devoted to extolling the benefits of Clean Diesel cars.[65]

61. BloombergBusiness noted that consumers are willing to pay a substantial premium

---

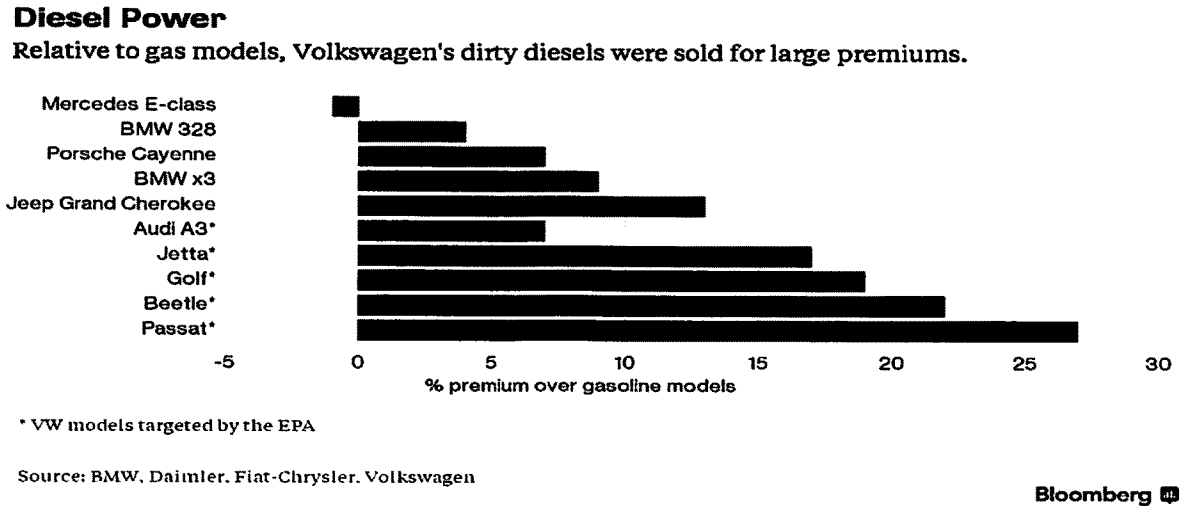
[62] http://mobile.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?referer.

[63] http://www.greencarreports.com/news/1080201_vw-diesel-buyers-hybrid-buyers-both-want-fuel-economy-but-beyond-that.

[64] http://www.autosphere.ca/fleetdigest/2013/04/01/volkswagen-surveys-diesel-drivers/. *See also* http://www.cmu.edu/gdi/docs/diesel-and.pdf (noting many key differences between diesel and hybrid car customers).

[65] http://www.clearlybetterdiesel.org/index.html#cleanDiesel.

for Clean Diesel vehicles over those of its competitors.[66]



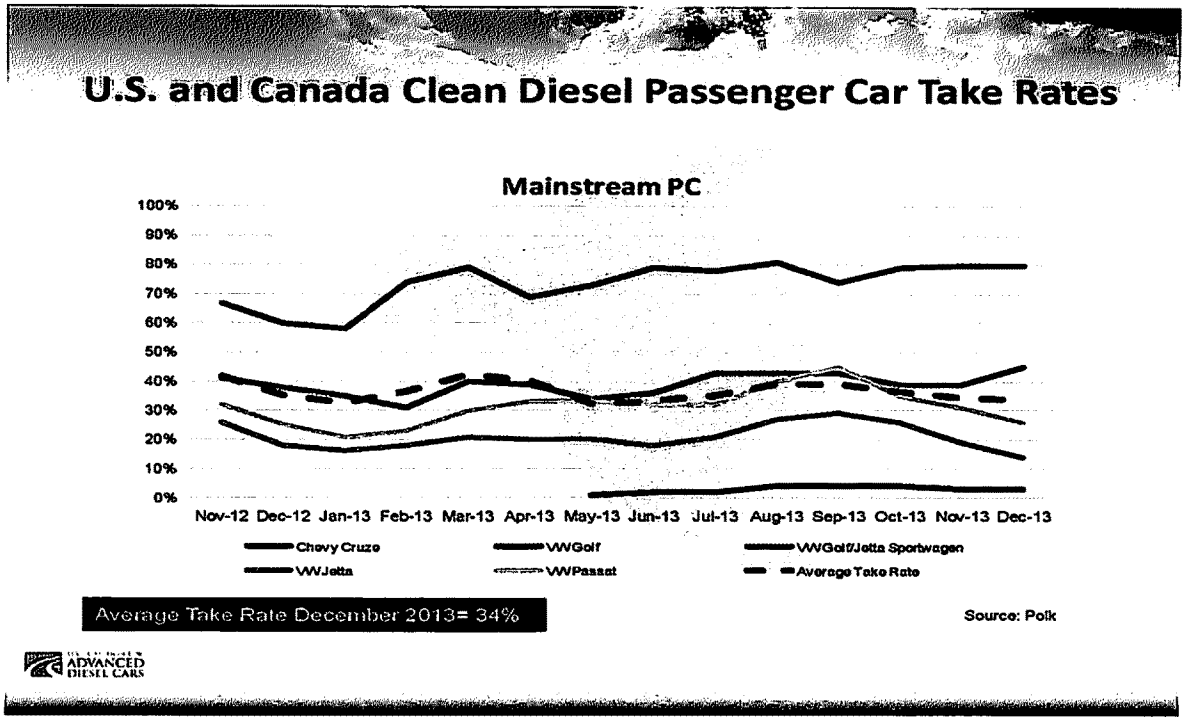
62. As the BloombergBusiness article goes on to explain:

> The math on diesel has never been tidy. The additional mileage is great, but unless one drives a lot, it doesn't really cover the added expense for the engine and for the fuel itself. At current gas prices, the diesel premium on the Passat—some $5,755—would buy enough gas to drive the gas-burning model for about 88,000 miles. **For the majority of diesel drivers, the factor that probably swung the decision was the apparent environmental benefit. The green aspect was the fulcrum.** (Emphases added).

Thus, Volkswagen's false claims about its TDI technology were a driving factor in the premium prices it charged consumers for such technology. As noted above, VWAG has taken full responsibility for the "economic damage" caused by its illegal conduct.

[66] http://www.bloomberg.com/news/articles/2015-09-23/volkswagen-s-other-diesel-ruse-premium-pricing.

63. A chart contained in a presentation made by CMW Research at the March 2015 DTF conference[67] underscores the differences in take rates between Volkswagen Clean Diesel cars and those made by its competitors:



64. The price premium for Clean Diesel vehicles is also reflected in this chart showing the price differentials between gasoline-powered models and Clean Diesel models of Volkswagen's own cars:

Clean Diesel Price Premium				
Mode	**Base**	**Mid-Level**	**Top-Level**	**Average**
VW Jetta	$2,860.00	$1,570.00	$1,030.00	$1,820.00
VW SportWagen	$5,570.00	$1,680.00	$0.00	$2,416.67
VW Golf	$2,400.00	$1,000.00	$1,000.00	$1,466.67
VW Golf	$2,950.00	$1,000.00	$1,000.00	$1,650.00
VW Beetle	$4,635.00	$4,920.00	$0.00	$3,185.00
VW Beetle	$4,080.00	$530.00	$700.00	$1,770.00
VW Passat	$5,755.00	$2,845.00	$2,135.00	$3,578.33

[67] http://cleandieseldelivers.com/media/Take-Rate-Slides-March-2014.pdf.

Audi A3	$2,300.00	$2,300.00	$2,300.00	$2,300.00
Average	$3,818.75	$1,980.63	$1,020.63	$2,273.33

E. Volkswagen's False Advertising.

65. Volkswagen, as part of its plan to increases sales and market share in the United States, increased its emphasis on diesel-powered cars and began marketing these cars heavily to the United States public beginning in 2008. It emphasized the TDI Clean Diesel cars' environment-friendly engine, excellent gas mileage, and high-quality performance. In one advertisement (which, as of this writing, was available on Audi's website after the scandal surfaced and is attached as Exhibit 5 to the Complaint),[68] for example, Volkswagen claimed:

> Getting more from less. Audi pioneered TDI® clean diesel engines to deliver more torque, lower fuel consumption and reduce CO2 emissions, compared to equivalent gasoline engines. The result of this revolutionary engineering delivers remarkable performance, while achieving increased fuel economy.

66. Another advertisement by VWAG for Clean Diesel cars asserts that

> This ain't your daddy's diesel. Stinky, smoky, and sluggish. These old diesel realities no longer apply. Enter TDI Clean diesel. Ultra-low-sulfur fuel, direct injection technology, and extreme efficiency. We've ushered in a new era of diesel.[69]

This internet advertisement is attached as Exhibit 6 to the Complaint.

67. Volkswagen's advertising relentlessly touted the supposed fuel efficiency and environmental features of its Clean Diesel TDI vehicles. In 2009, Volkswagen introduced its "Meet the Volkswagens" campaign, which promoted "fuel efficiency, green credentials, cost of ownership and safety," and compared Volkswagen's diesel passenger cars to its competitors. According to Tim Ellis, Volkswagen's marketing chief, the goal of this advertising campaign was to "grow the brand in the U.S."[70] This campaign, among other things, included social media links

68 https://web.archive.org/web/20150928180733/http://www.audiusa.com/technology/efficiency/tdi

69 https://web.archive.org/web/20150330110301/http://www.vw.com/features/clean-diesel/.

70 http://abcnews.go.com/Business/story?id=7493781.

to a blog (tdi.vw.com/tdi), which focused on Volkswagen's TDI clean diesel model.

68. Between 2011 and 2013, Volkswagen spent more than $2.9 billion annually on advertising world-wide; many of those advertising dollars were directed at the United States public. Volkswagen issued hugely popular videos featuring the Golden Sisters, who purported to debunk the myths about polluting diesel cars.[71] Other videos that were highly successful included a "Truth or Dare" effort started in 2009 that was about "debunking the myths on clean diesel and fueling the passion of existing diesel owners"; a 2009 Audi video that proclaimed "diesel, no longer a dirty word"; and a Passat "being a Mom" video, all of which can be viewed on the *New York* magazine website.[72] Another well-known video showed German engineers of TDI Clean Diesel vehicles earning their "angel's wings."[73]

69. Volkswagen also used point-of-purchase displays at the showrooms of Volkswagen Authorized Dealers such as the one depicted below:

[71] http://blog.caranddriver.com/vws-hilarious-new-tdi-diesel-ads-return-excellent-viral-mileage/.

[72] http://nymag.com/daily/intelligencer/2015/09/vws-clean-diesel-ads-now-make-us-feel-dirty.html.

[73] https://www.youtube.com/watch?v=fwkPEza9FPw.

70. As VWoA's Mark Barnes put it, the TDI Clean Diesel cars were "fantastic power train[s]" with "very good fuel economy." Yet "[i]t's also good for the environment because it puts out 25% less greenhouse gas emission than what a gasoline engine would. And thanks to the uniqueness of the TDI motor, it cuts out the particulate emissions by 90% and the emissions of nitrous oxide are cut by 95%. So a very very clean running engine. Clean enough to be certified in all 50 states."[74]

71. In television and print advertisements and in social media, Volkswagen strived to present its Clean Diesel TDIs as the environmentally-friendly, fuel-efficient, fun-to-drive and reasonably priced passenger car. As noted above, Volkswagen's sham advertising campaign was a success. Unfortunately, all of these accolades were based on a sham perpetrated by Volkswagen for seven years.

F. Volkswagen's Defeat Device.

72. As noted above, Volkswagen's defeat device is described as a "sophisticated software algorithm" that detects when the car is undergoing emissions testing. The algorithm used information about how the car was being steered, how long the engine ran and atmospheric pressure to "precisely track" the conditions that corresponded to a federal emissions test, according to the EPA. During emissions testing, the software "turns on" the car's full emissions control system in order to pass the test. Under normal driving situations, however, these emissions control systems are ***turned off***, allowing the cars to spew as much as 40 times the allowable amount of NOx into the air. As an EPA spokesman noted, the defeat device was "particularly difficult for us to detect."[75] This ruse went undetected for seven years, although as noted above, Bosch and one

[74] http://www.businessinsider.com/volkswagen-preps-for-a-diesel-revolution-2009-10.

[75] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagons-deception-the-recall-that-never-fixed-any-cars/. A useful timeline of how the scandal came to light is provided on the website of Cars.com: https://www.cars.com/articles/vw-diesel-crisis-timeline-of-events-1420681251993/.

of VWAG's own engineers complained about it to the company.

73. One technology blog has described Volkswagen's defeat device as follows:

> The method by which Volkswagen diesel cars were able to thwart emissions tests and spew up to 40X the nitrogen oxide levels set by the Environmental Protection Agency was relatively simple. It was more likely no more than a single line of code used to detect when an emissions test was being performed and place the emissions system in an alternate mode — something as simple as a software "on/off" switch. Volkswagen AG CEO Martin Winterkorn, who stepping down as the result of his company's scandal, has said he had no knowledge of the emissions cheat, but software dev/test audit trails are almost certain to pinpoint who embedded the code and who authorized it. You can actually see who asked the developer to write that code," said Nikhil Kaul, a product manager at test/dev software maker SmartBear Software. "Then if you go upstream you can see who that person's boss was...and see if testing happened...and, if testing didn't happen. So you can go from the bottom up to nail everyone."[76]

74. As also noted above, 482,000 vehicles were described as affected, with over 50,000 in the state of California.[77]

75. In 2013 and again in 2014, the International Council for Clean Transportation ("ICCT") published studies showing serious discrepancies between laboratory and in-use emissions of certain cars, including VW TDI Diesel cars used in Europe.[78] A decision was made to test American Clean Diesel cars to show that they were success stories; the opposite turned out to be the case. The ICCT, in conjunction with researchers at and West Virginia University's Center for Alternative Fuels, Engines and Emissions ("CAFEE") conducted on-road emissions tests on three vehicles sold in the United States: a 2013 TDI Passat, a 2012 TDI Jetta, and a BMW X5

---

[76] http://developers.slashdot.org/story/15/09/24/1423225/how-did-volkswagen-cheat-emissions-tests-and-who-authorized-it.

[77] http://www.latimes.com/business/autos/la-fi-hy-california-dmv-vw-diesel-20150921-story.html. This number excludes unregistered vehicles.

[78] http://theicct.org/sites/default/files/publications/ICCT_LabToRoad_20130527.pdf; http://www.theicct.org/sites/default/files/publications/ICCT_LaboratoryToRoad_2014_Report_English.pdf)

SUV. These researchers found that for the Passat and Jetta, emissions were far higher than the emissions generated in the laboratory by CARB. The Jetta exceeded United States NOx emissions standard by 15 to 35 times, and the Passat by five to 20 times. In laboratory testing by CARB, in contrast, these same vehicles complied with United States NOx emissions standards. The CAFEE report is attached as Exhibit 7 to the Complaint. ICCT brought the information to the attention of CARB and the EPA, who commenced their own investigations and contacted Volkswagen. Volkswagen chalked the discrepancies up to "various technical issues and unexpected in-use conditions", but agreed in December of 2014 to recall approximately 500,000 vehicles in order to apply a "software patch."[79]

76. After the remediation, CARB in May of 2015 tested a 2012 TDI Passat on the road and in the laboratory. It found some improvement in in-use NOx emissions, but not enough. An article in the *Philly Voice* describes what happened next.

> On July 8, CARB shared its results with VW, but there was no change in Volkswagen's position. Some officials privately questioned whether Volkswagen was deliberately violating the federal Clean Air Act by installing defeat devices -- software programmed to switch engines to a cleaner mode during official emissions testing, according to a person involved in the process.
>
> During normal driving, the software then shuts off, enabling cars to emit as much as 40 times the legal limit of pollutants.
>
> In early August, Oliver Schmidt, who followed [Norbert] Krause and preceded [Stuart] Johnson in VW's U.S. engineering and environmental office, attended a conference in Traverse City, Michigan and told regulators Volkswagen stood by its conclusions that the problem was technical, people involved said.[80]

77. Then, on August 21, there was a complete reversal. The *Philly Voice* article goes on to describe what happened:

> After more than a year of stonewalling investigators, Volkswagen stunned two senior officials with the U.S. Environmental Protective Agency and California's environmental watchdog by admitting the automaker hacked its own cars to deceive U.S.

[79] http://www.cnbc.com/2015/09/24/.

[80] http://www.phillyvoice.com/year-stonewalling-volkswagen-stunned-regulators/.

> regulators about how much their diesel engines pollute.
>
> That disclosure on Aug. 21, confirmed by two people with knowledge of the exchange, shows Volkswagen buckled to pressure from environmental regulators almost a month earlier than the scandal was made public. The admission to regulators came after a year during which VW officials insisted to regulators that tests on its diesel cars showing a spike in pollution levels on the road were in error.
>
> ****
>
> At first, regulators were surprised that Volkswagen would make its confession at the conference, held in Pacific Grove, California. Minutes before Christopher Grundler, director of the EPA's transportation and air quality office, was to deliver a 9 a.m. speech to the conference, a Volkswagen representative told him about the deception. At the same meeting, representatives of the California Air Resources Board, a state agency that had been pushing VW hard, were also given a verbal notice of the deception, people with knowledge of the events said.
>
> Volkswagen declined to comment on the sequence of events described to Reuters. It isn't clear which VW representative delivered the news of the deception to Grundler and the CARB. Stuart Johnson, head of VW's engineering and environmental office in the United States, was registered to attend the Aug. 21 conference, which was organized by the University of California, Davis. Johnson, who still works for VW in Auburn Hills, Michigan, did not respond immediately to a request for comment.

78. Volkswagen was faced with the threat that the EPA it would not certify any of its 2016 models for sale in the United States until the questions surrounding the emissions discrepancies were answered. Volkswagen admitted that it relied upon a "second calibration" in the vehicles that was intended to run only during certification testing. This second calibration was triggered when a highly sophisticated software algorithm determined – after measuring factors like the position of the steering wheel, the vehicle's speed, pedal movement, and even barometric pressure – that the car was being tested. Then it would configure the engine to reduce emissions of NOx. As David Clegern of CARB explained, "[w]e met with VW on several occasions and they continued to dispute our data, so we'd return to the lab. Over time, VW had no other explanations left, and it was our lab staff who actually got VW to admit that there was, in fact, a defeat device."[81]

[81] http://www.foxnews.com/leisure/2015/09/22/for-7-years-vw-software-thwarted-pollution-regulations/.

As another CARB spokesperson told the *Washington Post*, "[t]hey basically ran out of excuses."[82]

79. The scandal surfaced on September 18, 2015, when CARB and the EPA announced that VWAG, Audi and VWoA had illegally installed emissions testing "defeat devices" in the aforementioned vehicles. *See* Appendices 1 and 2. The EPA found violations of 42 U.S.C. §§7522(a), 7522(a)(1) and 7522(a)(3)(B), as well as 40 C.F.R. §§86.1854-12(a)(3)(ii) and 86.1854-12(a). The EPA identified the following affected vehicles:

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2013	DVWXV02.0U4S	VW Passat
2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGAV02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

80. As noted above, Horn of VWoA admitted that Volkswagen was dishonest with both customers and regulators and Huber of VWAG called the matter a "moral and political disaster."

[82] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagonsdeception-the-recall-that-never-fixed-any-cars/.

81. Volkswagen has ordered its dealers to cease selling the Class Vehicles[83] and has set aside a minimum of 6.5 billion Euros ($7.2 billion) to deal with the fallout from this catastrophe, which it now concedes involved 11 million vehicles worldwide. An internal memorandum issued on September 22 details this:

Wolfsburg, 22 September 2015

Volkswagen AG has issued the following information:

Volkswagen is working at full speed to clarify irregularities concerning a particular software used in diesel engines. New vehicles from the Volkswagen Group with EU 6 diesel engines currently available in the European Union comply with legal requirements and environmental standards. The software in question does not affect handling, consumption or emissions. This gives clarity to customers and dealers.

Further internal investigations conducted to date have established that the relevant engine management software is also installed in other Volkswagen Group vehicles with diesel engines. For the majority of these engines the software does not have any effect.

Discrepancies relate to vehicles with Type EA 189 engines, involving some eleven million vehicles worldwide. A noticeable deviation between bench test results and actual road use was established solely for this type of engine. Volkswagen is working intensely to eliminate these deviations through technical measures. The company is therefore in contact with the relevant authorities and the German Federal Motor Transport Authority (KBA – Kraftfahrtbundesamt).

To cover the necessary service measures and other efforts to win back the trust of our customers, Volkswagen plans to set aside a provision of some 6.5 billion EUR recognized in the profit and loss statement in the third quarter of the current fiscal year. **Due to the ongoing investigations the amounts estimated may be subject to revaluation.**
Earnings targets for the Group for 2015 will be adjusted accordingly.

Volkswagen does not tolerate any kind of violation of laws whatsoever. It is and remains the top priority of the Board of Management to win back lost trust and to avert damage to our customers. The Group will inform the public on the further progress of the investigations constantly and transparently.

82. Volkswagen has indicated it will initiate a recall and remediation of the Class Vehicles, but there is no "fix" that can be achieved that would not result in lesser mileage per gallon or degraded performance, two of the key attributes on which TDI Clean Diesel cars were sold.

[83] *See* http://pics3.tdiclub.com/data/3209/stop-sale-note3.pdf.

> Experts Reuters spoke to indicate that two potential fixes could be needed for the two types of emissions control systems featured on 482,000 cars in the U.S., complicating the recall and refit process. Some experts opined that just a software solution could make the affected vehicles compliant with EPA regulations, reducing the performance characteristics of the engines in the process, while others suspect that a hardware solution may be needed for older vehicles without the urea injection system.
>
> A couple of experts warned that the potential solution could involve significantly increased consumption of urea, necessitating fill-ups at more frequent intervals such as every 5,000 miles, in addition to reducing the performance of the engines.[84]

The same point was made by the West Virginia AG in a complaint filed on October 2 against Volkswagen for civil penalties. It is attached as Exhibit 8. In that complaint, the West Virginia AG notes that "Volkswagen will not be able to comply with the EPA [recall] order to make the Affected Vehicles comply with emissions standards without substantially degrading their performance and fuel efficiency to a level below that advertised by Volkswagen, and below that experienced by consumers prior to, or when they purchased their vehicles." Thus, there is no valid "cure" for Volkswagen's conduct.

83. Nor can any recall cure the tarnished reputation of Volkswagen's TDI Clean Diesel vehicles and the substantial diminution of their resale value. The Kelley Bluebook has reported that prices for used Volkswagen diesel cars have declined by 21% in the last few weeks, reflecting the aftermath of Dieselgate.[85] Thus, customers not only overpaid when they bought the Class Vehicles, but have suffered a significant diminution of the resale value of their vehicles. Indeed, a survey of 460 fleet buyers in the United Kingdom revealed that 49% of them were reconsidering their contracts with Volkswagen in the aftermath of the Dieselgate revelations.[86]

84. As noted above, the Executive Committee of the Board that accepted his retirement

---

[84] http://autoweek.com/article/car-news/vw-diesel-emissions-fix-may-require-2-solutions.

[85] http://www.latimes.com/business/autos/la-fi-hy-auto-sales-20151001-story.html.

[86] http://www.dailymail.co.uk/money/news/article-3258793/VW-scandal-deepens-revealed-half-company-car-buyers-ditch-embattled-firm.html.

said that it "recognizes the economic damage caused" as well as the "loss of trust" among customers. No recall and supposed remediation can correct that.

85. A survey of vehicle owners conducted by AutoPacific[87] further reveals consumer disgust with Volkswagen. Only one in four have a positive opinion of Volkswagen, compared to three in four before the scandal. The corresponding figures for Audi were 29%, as opposed to 69%. Sixty-four percent of the survey respondents say they do not trust Volkswagen.

86. But the illegal conduct by Volkswagen has not just resulted in economic damage and loss of consumer trust. It has caused **the death of dozens of people in the United States over the last seven years and degraded the health of many more**. On October 3, Associated Press ("AP") laid out the facts.[88] AP calculated exhaust pollution year by year, starting with the ten to 40 times emissions level estimate by the EPA and then factored in mileage and car number totals from the Kelley Blue Book. It came up with a range of NOx pollution caused by the Class Vehicles and then took it to scientists who modeled mortality rates, which were confirmed by a dozen experts in emissions, risk and public health, none of whom were environmental advocates or representatives of automobile manufacturers. The results are depicted in the chart that follows.

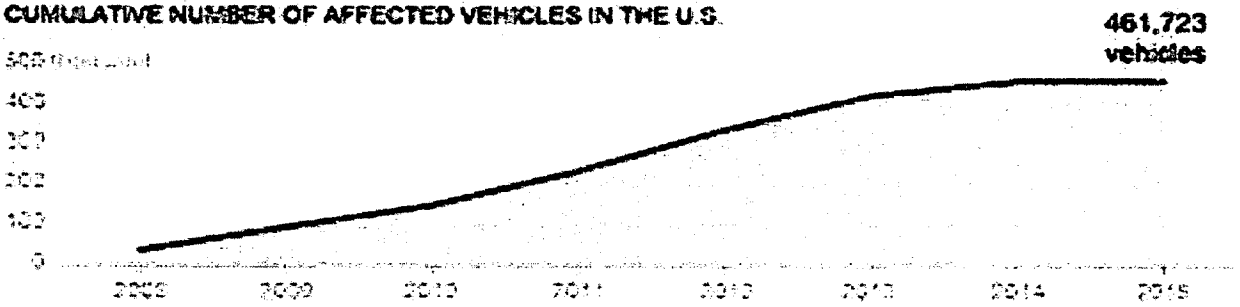
[87] http://www.autopacific.com/news-app/story.248/title.volkswagen-s-reputation-takes-big-hit-with-vehicle-owners-autopacific-predicts-tough-road-ahead.

[88] http://bigstory.ap.org/article/a6925f0af82e44aaa1a1ed4b55d030f6/ap-analysis-dozens-deaths-likely-vw-pollution-dodge.

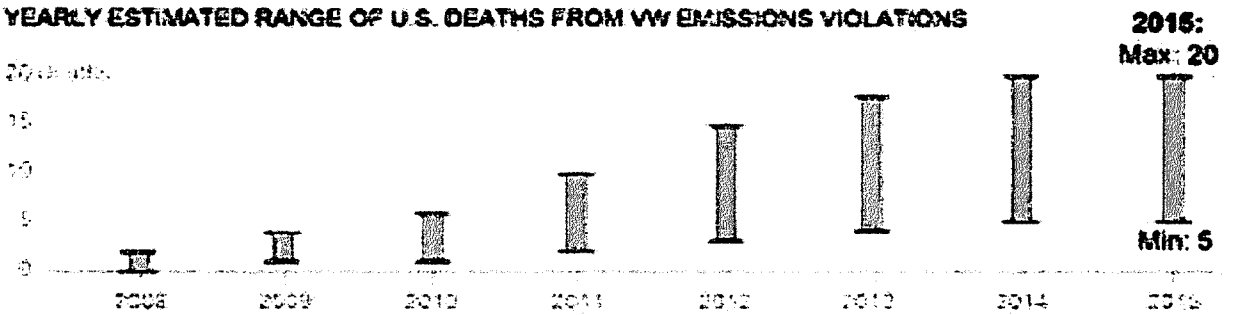
Calculating human toll of VW emissions problems

U.S. pollution resulting from Volkswagen's dodging of emissions tests is enough to have caused dozens of deaths since 2008. An AP analysis calculated upper and lower limits of pollution using the number of affected vehicles each year and average mileage. Scientists used that data in epidemiological computer models to estimate a range of deaths.

CUMULATIVE NUMBER OF AFFECTED VEHICLES IN THE U.S.

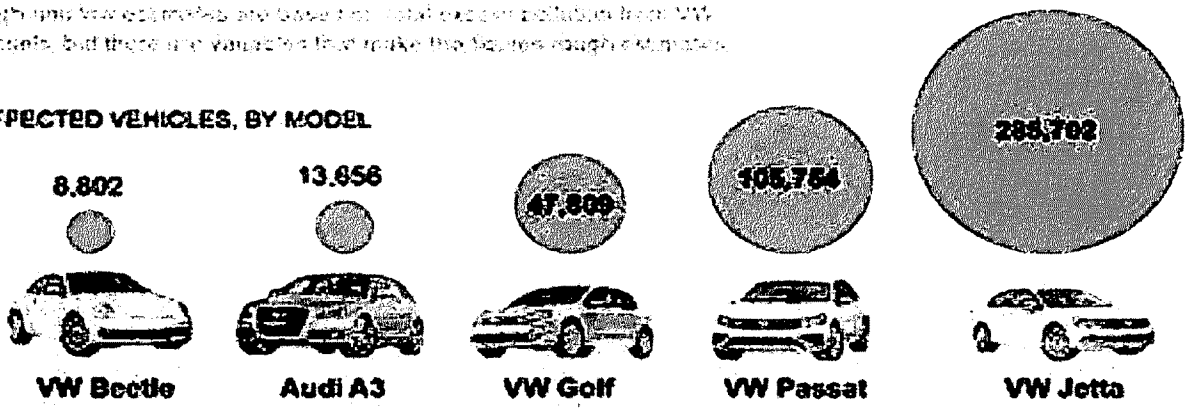


YEARLY ESTIMATED RANGE OF U.S. DEATHS FROM VW EMISSIONS VIOLATIONS



High and low estimates are based on total excess pollution from VW diesels, but there are variables that make the figures rough estimates.

AFFECTED VEHICLES, BY MODEL



NOTE: The total of 47,809 for VW Golf includes 8,833 VW GTI sportswagen vehicles. The total of 461,723 is derived from Kelley Blue Book vehicle registration data. The Environmental Protection Agency puts the total number of affected vehicles in the U.S. at about 482,000.

SOURCES: AP analysis of data from the U.S. Environmental Protection Agency and Kelley Blue Book; AP Statistical Police Affairs Cullen/Frey; Volkswagen Asia

87. As the AP article notes, the Class Vehicles spewed enough NOx over the course of seven years to significantly degrade the environment in urban areas. Eric Schneiderman, the New York AG has said that "[t]he stakes could not be higher for the health and safety of our communities who, if Volkswagen's own admissions are true, have for years been breathing air containing excess pollution from their vehicles."[89] Harris County Texas (where the City of Houston is located) has already sued Volkswagen for $100 million in harm to air quality.[90]

88. As noted in the *Minneapolis Star-Tribune* in a follow-up piece on the AP story:

> Computer software allowed VW diesel cars to spew between 10 to 40 times more nitrogen oxides (NOx) than allowed by regulation, making this "clearly a concern for air quality and public health," said Janet McCabe, acting air quality chief for the U.S. Environmental Protection Agency.
>
> Nitrogen oxides mostly form smog — that murky, dirty air that makes it hard to see and for some people to breathe — but also amplify a deadlier, larger problem: tiny particles of soot. Numerous medical studies show those tiny particles cause about 50,000 deaths a year in the United States, mostly from heart problems.
>
> Nitrogen oxides can travel hundreds of miles, so pollution spewed in Pittsburgh can be felt on the East Coast, [Carnegie Mellon environmental engineer Professor Peter] Adams said.
>
> Experts calculate how much pollution costs society by looking at the value of lost lives. In this case, Adams and other said the lost lives — valued at $8.6 million apiece — overwhelm other costs such as lost work days or hospital costs. The overall annual cost of the extra pollutants from the VW diesels ranged from $40 million to $170 million, environmental engineering professors calculated. "Even the small increase in NOx from VW diesel emissions is likely to have worsened pollution along the roadways where they have traveled, and affected the lives of hundreds of thousands of people," said Dan Greenbaum, president of the Health Effects Institute in Boston.

---

[89] http://mobile.nytimes.com/2015/10/03/business/us-states-jumping-into-investigation-of-vw-emissions-deception.html?_r=0&referer=https://www.google.com/.

[90] http://www.wsj.com/articles/u-s-justice-department-conducts-criminal-probe-of-volkswagen-sources-say-1442869059.

> "To say millions of people of people are breathing poor air as the result of that is not off the mark," said Greenbaum, who runs the institute that is funded by both the EPA and the auto industry to serve as an independent arbiter of the science.[91]

89. The revelation of the scandal has led to numerous consequences in the United States. The DOJ is conducting a criminal probe of Volkswagen.[92] AGs in 30 states have initiated their own investigation.[93] A Texas judge has issued a temporary restraining order preventing the Class Vehicles from being sold within the state. *See* Exhibit 9 to the Complaint. The Subcommittee of Oversight & Investigations of the Energy & Commerce Committee of the United States House of Representatives has initiated an investigation and sent letters to Volkswagen and the EPA.[94] Horn has said he will testify before the committee on October 8.[95] Fred Upton, the chairman of the full committee, has stated that "[t]he very notion of a carmaker intentionally violating our environmental laws is beyond belief....[R]eports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated. Attempting to deceive regulators and customers is a double whammy of betrayal."[96] Nearly 200 private lawsuits have been filed, many of them class actions. Among those class actions, most involve class claims for individual statewide classes, as opposed to federal claims for nationwide classes.

90. Outside the United States, several countries are investigating Volkswagen's

VW FOIA, EPA 06/20/2017 2017-FFP_030830

conduct.[97] Switzerland has banned the sale within its borders of certain Volkswagen TDI Diesel cars sold in Europe.[98] Prosecutors in Paris have launched an investigation for suspected "aggravated" deception of affected vehicles sold in France; French Environment Minister Segolene Royal called Volkswagen's conduct "a form of theft from the taxpayer and the state."[99] The Italian antitrust authority has also commenced an investigation, saying "Volkswagen's claims about emissions and certifications in advertising campaigns and information brochures distributed by dealers might have induced consumers to make an error in their choice."[100]

91. As noted above, Volkswagen has set aside $7.2 billion to deal with the costs of the scandal. That will not be nearly enough. James E. Tierney, a former AG in Maine, has been quoted as saying that the costs to Volkswagen might be "'incalculable,' with each false advertisement to consumers, for example, carrying a potential penalty. 'This product was designed to operate illegally, and that is very serious.'"[101]

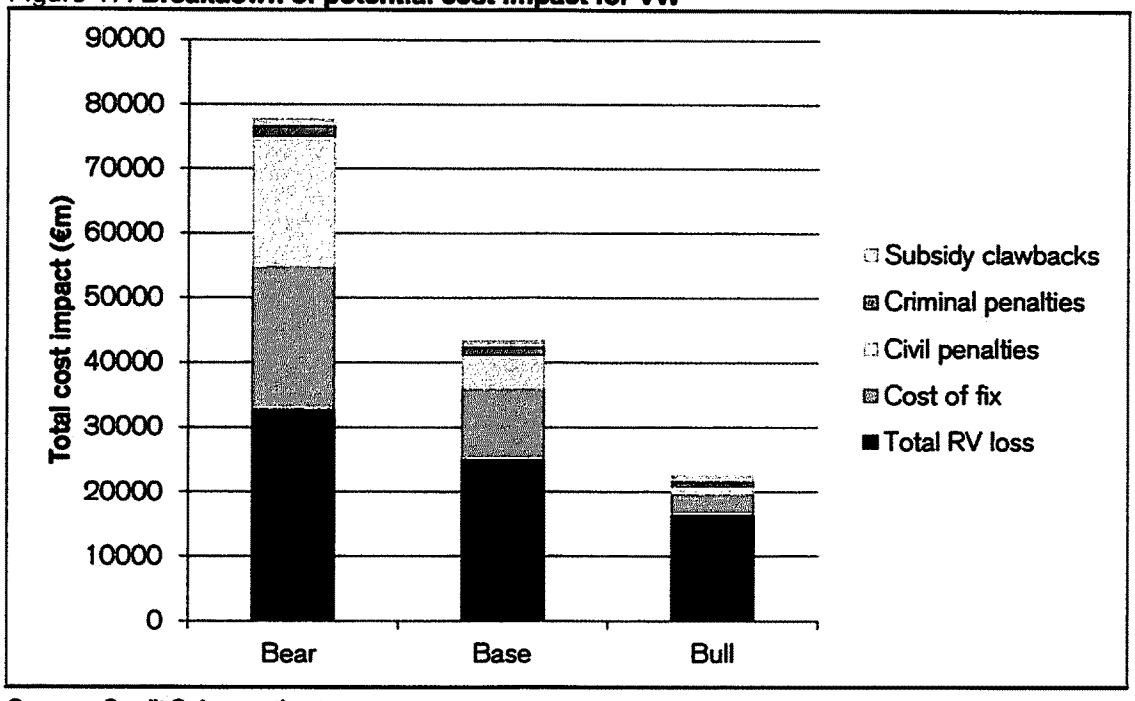
92. Nonetheless, some attempts at calculation have been made. On October 2, Credit Suisse disseminated an analysis showing Volkswagen's anticipated costs in a "bull" scenario (where events turned out favorably to it), a "base" scenario, and a "bear" scenario (where events turned out unfavorably).[102] The "bull" scenario was $25.6 billion in costs, while the "bear" scenario was $87.1 billion. The analysis is summarized in the following chart:

Figure 17: **Breakdown of potential cost impact for VW**



Source: Credit Suisse estimates

As can be seen, costs associated with criminal and civil penalties make up a significant portion of the differing amounts. Credit Suisse also predicts that Volkswagen's stock may decline another 20%.

VI. CLASS ACTION ALLEGATIONS.

93. Plaintiffs bring this action both on behalf of themselves, and as a class action pursuant to Federal Rules of Civil Procedure 23(a) and (b)(3), on behalf of the following class (the

[102] http://www.businessinsider.com/credit-suisse-volkswagen-shares-could-fall-another-20-2015-10?r=UK&IR=T.

VW FOIA, EPA 06/20/2017 2017-FFP_030832

"Class").

> All persons and entities who purchased or leased a Class Vehicle from a Volkswagen Authorized Dealer in the United States. Excluded from the Class are Defendants, their parent companies, subsidiaries and affiliates, any co-conspirators, all governmental entities, and any judges or justices assigned to hear any aspect of this action.

The Class includes subclasses of persons located in California and Virginia. These will be referred to herein as the "California Subclass" and the "Virginia Subclass."

94. Plaintiffs do not know the exact number of Class and Subclass members but believe based on published reports that there are more than 482,000 Class members, geographically dispersed throughout the United States such that joinder of all class members is impracticable. The identity of Class members can be determined from the internal records of Volkswagen.

95. Plaintiffs' claims are typical of the claims of the Class and Subclasses in that Plaintiffs purchased or leased a Class Vehicle from a Volkswagen Authorized Dealer in the United States. All Class and Subclass members were damaged by the same wrongful conduct of Defendants and their co-conspirators as alleged herein, and the relief sought is common to the class.

96. Common questions of law and fact predominate over any individual questions. These questions include, but are not limited to:

- Whether Volkswagen unlawfully acquired a monopoly in the Clean Diesel Car Market;
- Whether the Clean Diesel Car Market is a properly defined product market for purposes of Section 2 of the Sherman Act;
- Whether Volkswagen's acquisition and/or maintenance of a monopoly in the Clean Diesel Car Market had the effect of increasing to supracompetitive levels the retail prices of Class Vehicles;
- Whether Volkswagen violated the CAA and applicable regulations;
- Whether Volkswagen violated California Pollution Control laws and applicable

regulations;

- Whether Volkswagen's conduct violated RICO;
- Whether the Volkswagen RICO Enterprise as defined herein is a cognizable RICO enterprise;
- Whether Volkswagen committed federal mail and wire fraud, thus establishing predicate acts under RICO:
- Whether Volkswagen engaged in a pattern of racketeering activity;
- Whether Plaintiffs and Class members were injured in their business or property, and, if so, what is the appropriate measure of their damages;
- Whether Volkswagen misrepresented the environmental impact of its Class Vehicles;
- Whether Volkswagen misrepresented the Class Vehicles' emission standards compliance, fuel efficiency or performance;
- Whether Volkswagen violated the Magnuson-Moss Warranty Act;
- Whether Volkswagen violated California's Consumer Legal Remedies Act;
- Whether Volkswagen violated California's Unfair Competition Law;
- Whether Volkswagen violated California's False Advertising Law;
- Whether Volkswagen violated Virginia's Consumer Protection Law;
- Whether Volkswagen committed fraudulent concealment;
- Whether Volkswagen was unjustly enriched;
- Whether Plaintiffs and the other members of the Class and Subclasses were injured by Defendants' conduct, and, if so, the appropriate classwide measure of damages for Class members; and
- The scope of any injunctive and other equitable relief to which Plaintiffs and the other members of the Class and Subclasses are entitled.

97. These and other questions of law and fact are common to the Class and Subclasses

VW FOIA, EPA 06/20/2017 2017-FFP_030834

predominate over any questions affecting only individual Class members.

98. Plaintiffs' claims are typical of the claims of the Class and Subclasses because Plaintiffs purchased a Class Vehicle from a Volkswagen Authorized Dealer in the United States.

99. Plaintiffs will fairly and adequately represent the interests of the Class and Subclasses in that they have no conflict with any other members of the Class and Subclasses. Furthermore, Plaintiffs have retained competent counsel experienced in antitrust, class action, and other complex litigation.

100. Defendants have acted on grounds generally applicable to the Class, thereby making final injunctive relief appropriate with respect to the Class and Subclasses as a whole.

101. This class action is superior to the alternatives, if any, for the fair and efficient adjudication of this controversy. Prosecution as a class action will eliminate the possibility of repetitive litigation. There will be no material difficulty in the management of this action as a class action. The prosecution of separate actions by individual Class and Subclass members would create the risk of inconsistent or varying adjudications, establishing incompatible standards of conduct for Defendants.

CAUSES OF ACTION

FIRST CLAIM

Violation of the Section 2 of the Sherman Antitrust Act (Monopolization) (15 U.S.C. § 2).

102. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

103. The relevant product market for purposes of Plaintiffs' claims under Section 2 of the Sherman Act is the Clean Diesel Car Market, which, as noted above, consists of: (a) the product market of Clean Diesel passenger cars and (b) a geographic market consisting of the United States. All diesel fuel sold in the United States during the relevant period is "clean diesel fuel", with 97% less sulfur than the diesel sold in the 1970s. Similarly, all diesel cars sold in the United States since 2007 (which have had to meet the same emission standards as gasoline engines) have advanced engines and emissions control technology that make the diesel engines cleaner than in

VW FOIA, EPA 06/20/2017 2017-FFP_030835

the past, are able to take advantage of the clean diesel fuel, and use exhaust systems that further reduce diesel engine emissions.

104. As Volkswagen's own market research and market research by others described above have demonstrated, clean diesel cars are not in the same relevant market as gasoline or even hybrid cars of similar size and class. Diesel engines require the use of a different and more expensive fuel than gasoline-powered engines, can travel much greater distances on a single tank of fuel, and are more expensive. Unlike hybrid or electric vehicles, diesel-powered vehicles do not have to be plugged in, can travel greater distances without refueling or plugging in, and -- particularly with more recent compression technology like the Volkswagen's TDI engines -- have greater torque, acceleration, and towing power. In addition, the demographics of the clean diesel buyers are distinct from those of hybrid buyers; they are more likely to be male, younger, and less likely to have children.

105. At all relevant times, Volkswagen has been a competitor in the Clean Diesel Car Market, and has maintained significant market share. As the chart presented by Skorupski of VWoA depicted above demonstrates, Volkswagen's share of the Clean Diesel Car Market has been 70% or more during the entire relevant period.

106. Barriers to entry in the Clean Diesel Car Market are high. In addition to the barriers to entry and expansion posed by Volkswagen's anticompetitive conduct, as described in this Complaint, other barriers to entry include: high research and development costs, high costs of making diesel engines that are EPA- and CARB-compliant, and high capital costs.

107. Consumers, experts and commentators in the automotive industry, and the automobile manufacturers themselves, including Volkswagen, all recognize the Clean Diesel Car market as distinct from markets including gasoline, hybrid, or electric cars.

108. Volkswagen has monopoly power in the Clean Diesel Car Market.

109. Through the anticompetitive use of the defeat device and its deception of the EPA, CARB, Plaintiffs, and the Class, Volkswagen has willfully acquired and/or maintained its

VW FOIA, EPA 06/20/2017 2017-FFP_030836

monopoly of the Clean Diesel Car Market. This conduct has harmed competition in that market, and has caused injury to every person that purchased or leased a Class Vehicle. The purchase or lease price was higher than it would have been in a competitive market; the supply and selection of products was lower than it would have been in a competitive market; innovation has been stifled; and the number and effectiveness of competitors in that Market has been diminished by unlawful means.

110. As a result of this violation of law, the price of Class Vehicles was higher than it otherwise would have been.

111. There is no legitimate business justification for the conduct described in this Complaint which has facilitated Volkswagen's monopolization of the Clean Diesel Car Market.

112. The anticompetitive conduct described in this Complaint has caused injury to the business or property of Plaintiffs and members of the Class and is in violation of section two the Sherman Act (15 U.S.C. § 2).

113. Plaintiffs are buyers of Class Vehicles in the Clean Diesel Car Market; they are thus direct participants in the monopolized market. Volkswagen issues warranties directly to Class Vehicle buyers. The Volkswagen Authorized Dealers[103] obtain Class Vehicles from Volkswagen (through its American subsidiaries) that are certified to be EPA- and/or CARB-compliant and, as noted above, have visible stickers to that effect. The emissions testing that is used to justify those certifications is undertaken by VWoA in the United States.[104] Class Vehicles so labeled are

[103] In a recent recall notice unrelated to Dieselgate, Volkswagen has indicated that it has 652 authorized dealers in the United States. https://media.vw.com/doc/1456/volkswagen_issues_voluntary_recall-tiguan_label_recall_release-17883691505565f01ccc4bb.pdf. Their names and addresses can be identified through Volkswagen's records. The Volkswagen Authorized Dealers have a 12-person National Dealer Advisory Council that interacts closely with VWoA on such issues as company management.

[104] http://www.manufacturing.net/news/2015/10/vw-pollution-test-site-under-scrutiny-amid-emissions-cheating-scandal.

displayed on the showroom floors of Volkswagen Authorized Dealers. The false certifications by Volkswagen were one of the critical elements of its unlawful scheme of monopolization. The Volkswagen Authorized Dealers were agents of Volkswagen for the purpose of disseminating these false certifications and representations by Volkswagen to customers in order to induce them to purchase TDI Clean Diesel vehicles. In addition, Volkswagen (through its American subsidiaries) sets the Manufacturer's Suggested Retail Price ("MSRP") for Class Vehicles, which includes the premium for the TDI Clean Diesel technology described herein. While Volkswagen Authorized Dealers could charge customers a price less than the MSRP (such as when Volkswagen provides rebates or short-term retail promotions), that lesser price is nonetheless keyed off the MSRP and still contains a portion of the premium for the sham TDI Clean Diesel technology. This case involves retail prices for Class Vehicles paid by consumers like plaintiffs, who are participants in the relevant market and who pay more for those vehicles because of Volkswagen's illegal monopolistic practices.

SECOND CLAIM

Violation of Section 2 of the Sherman Antitrust Act (Attempted Monopolization) (15 U.S.C. § 2).

114. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

115. Volkswagen has acted with specific intent to monopolize the Clean Diesel Car Market as described above through the anticompetitive use of the defeat device and its deception of the EPA, CARB, Plaintiffs, and the Class.

116. There was and is a dangerous probability that Volkswagen will succeed in its attempt to monopolize the Clean Diesel Car Market because Volkswagen controls a large percentage of that market and has the ability to and actually did exclude competitors through the anticompetitive conduct described in this Complaint.

117. Volkswagen's conduct has harmed competition in the Clean Diesel Car Market, making the supply and selection of available Clean Diesel Cars lower than it would be in a competitive market.

VW FOIA, EPA 06/20/2017 2017-FFP_030838

118. There is no legitimate business justification for the conduct described in this Complaint which has facilitated Volkswagen's monopolization of the Clean Diesel Car Market.

119. The anticompetitive conduct described in this Complaint has caused injury to the business or property of Plaintiffs and members of the Class and is in violation of the Sherman Act (15 U.S.C. § 2).

THIRD CLAIM

Violation of the Racketeer Influenced and Corrupt Organizations Act ("RICO") (18 U.S.C. §§ 1962(c), 1964).

120. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

121. Each Plaintiff is a "person" within the meaning of 18 U.S.C. § 1964(c), and each has sustained injury to his or her business or property as a result of Volkswagen's conduct described in this Complaint.

122. Each Defendant is a "person" within the meaning of 18 U.S.C. § 1961(3).

123. Defendants violated 18 U.S.C. §1962(c) by participating in or conducting the affairs of the Volkswagen RICO Enterprise through a pattern of racketeering activity.

124. For the past seven years, Volkswagen has engaged in a deliberate, pre-meditated and continuous effort to deceive Plaintiffs, members of the Class, and federal and state regulators into believing that the Class Vehicles are environmentally-friendly, fuel-efficient, and EPA- and CARB-compliant. Unknown to Plaintiffs, Class members and federal and state regulators, Volkswagen installed pollution control defeat devices into the Class vehicles that turned off the pollution controls when the cars were in normal operating mode.

125. Plaintiffs and Class members had no way of knowing that these systems were disabled by Volkswagen. Pursuant to the CAA, Volkswagen was required to equip its cars with on-board diagnostic systems that trigger a dashboard "check engine" light that alerts the driver of a possible pollution control device malfunction. The Class Vehicles' diagnostic systems did not trigger this "check engine light," because the defeat device was designed to evade EPA and CARB pollution controls.

VW FOIA, EPA 06/20/2017 2017-FFP_030839

126. In dozens of advertising campaigns and statements and in certifications of EPA and CARB compliance Volkswagen has falsely represented the Class Vehicles' "green credentials" and performance.

127. Volkswagen engaged in a common course of conduct and conspiracy with the common purpose of defrauding Plaintiffs and members of the Class into purchasing Class Vehicles at artificially inflated prices.

The Volkswagen RICO Enterprise.

128. Volkswagen conducted the affairs of an association-in-fact enterprise (the "Volkswagen RICO Enterprise") through a pattern of racketeering activity, in violation of 18 U.S.C. § 1962(c).

129. The enterprise engaged in and continues to engage in interstate commerce, and its activities affect interstate commerce.

130. The Volkswagen RICO Enterprise is an association-in-fact enterprise comprised of the Defendants and Volkswagen Authorized Dealers in the United States. Each participant in the Enterprise played a designated, well-defined role in the affairs of the Volkswagen RICO Enterprise.

131. Volkswagen designed, manufactured, and sold to Volkswagen Authorized Dealers the Class Vehicles containing the defeat devices that are the subject of this Complaint. Volkswagen developed the advertising campaigns that misrepresented to Plaintiffs and Class members the true nature of the Class Vehicles, which were not, contrary to Defendants' misrepresentations, environmentally-friendly, fuel-efficient, or EPA- or CARB-compliant. Volkswagen deceptively certified the Class Vehicles as EPA- and CARB-compliant. And Volkswagen lied to CARB and EPA officials about the full nature and extent of the problem.

132. The Volkswagen Authorized Dealers that sold and leased the Class Vehicles to Plaintiffs and members of the Class were a critical element of the Volkswagen RICO Enterprise. Volkswagen sold the Class Vehicles to Volkswagen Authorized Dealers, who then sold or leased

VW FOIA, EPA 06/20/2017 2017-FFP_030840

them to Plaintiffs and members of the Class. Whether or not the Volkswagen Authorized Dealers knew that the Class Vehicles contained defeat devices that made Volkswagen's advertisements and representations false, the Volkswagen Authorized Dealers displayed those advertisements and repeated those misrepresentations. Indeed, Volkswagen required Volkswagen Authorized Dealers to display and repeat those misrepresentations in the Volkswagen and Audi Standard Dealer Agreements.

133. The Volkswagen RICO Enterprise has an ascertainable structure and purpose beyond the scope and commission of Volkswagens' predicate acts and conspiracy to commit such acts. The Enterprise is separate and distinct from Defendants, and functions as a continuing unit. The members of the Enterprise have distinct and separate roles and responsibilities.

134. At all relevant times, Volkswagen operated, controlled or managed the Volkswagen RICO Enterprise. Volkswagen's participation was critical for the success of the scheme to defraud because Volkswagen manufactured the Class Vehicles, designed and installed the defeat devices, and concealed those devices from Plaintiffs, Class members and regulatory authorities.

135. Section 1961(1)(B) of RICO defines "racketeering activity" as any act indictable under 18 U.S.C. §§1341 (mail fraud) and 1343 (wire fraud), among other statutes. As described in this Complaint, Volkswagen's conduct violated both of these laws.

136. Volkswagen conducted the affairs of the Volkswagen RICO Enterprise through a "pattern of racketeering activity," as defined by 18 U.S.C. §1961(5) by committing at least two acts of racketeering activity, *i.e.*, indictable violations of 18 U.S.C. §§1341 and 1343, within the past ten years. In fact, Volkswagen has committed dozens of acts of racketeering activity. Each racketeering act was related, had a similar purpose, involved the same or similar participants and method of commission, had similar results and impacted similar victims, including the Plaintiffs and members of the Class.

137. Defendants' multiple acts of racketeering activity were related to each other and amount to continued racketeering activity, and therefore constitute a "pattern of racketeering

VW FOIA, EPA 06/20/2017 2017-FFP_030841

activity" as defined in 18 U.S.C. §1961(5).

Predicate Act Violations of 18 U.S.C. §§1341 and 1343.

138. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §1341 (mail fraud), placed in post offices and/or in authorized repositories, matter and things to be sent or delivered by the U.S. Postal Service, caused matter and things to be delivered by commercial interstate carriers, and received matter and things from the U.S. Postal Service and/or commercial interstate carriers, including, but not limited to, advertising materials, marketing and sales materials, correspondence, contracts, sales and leasing documents, Certificates of Compliance, communications with the EPA, CARB and other regulatory officials, and other materials relating to the Class Vehicles sold and leased to Plaintiffs and Class members.

139. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §1343 (wire fraud), transmitted and received by wire, matter and things, which include, but are not limited to, advertising materials, marketing and sales materials, correspondence, contracts, sales and leasing documents, Certificates of Compliance, communications with the EPA, CARB, and other regulatory officials, and other materials relating to the Class Vehicles sold and leased to Plaintiffs and Class members.

140. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §§1341 and 1343, made numerous material misrepresentations about the Class Vehicles' environmental impact, fuel efficiency, and EPA- and CARB-compliance, and made many material omissions of fact, including concealing that the cars contained defeat devices that rendered them non-compliant with applicable emissions standards. Volkswagen made these misrepresentations and omissions with the intent and effect of inducing Plaintiffs to rely on such misrepresentations and omissions.

141. Defendants' misrepresentations, omissions of material facts, acts of concealment, and failures to disclose, were knowing and intentional, and made for the purpose of deceiving

VW FOIA, EPA 06/20/2017 2017-FFP_030842

Plaintiffs and Members of the Class into purchasing and leasing Class Vehicles.

142. Defendants either knew or recklessly disregarded the fact that the misrepresentations and omissions described above and incorporated herein were material, and Plaintiffs and Class members relied on the misrepresentations and omissions as set forth above.

143. Volkswagen's affirmative and deliberate misrepresentations regarding the Class Vehicles' environmental friendliness, fuel efficiency and performance, and omission of the true facts, were material factors in inducing Plaintiffs and Class members to purchase and lease the Class Vehicles. Plaintiffs and Class members relied on those misrepresentations and omissions and would have not purchased or leased the vehicles in their absence, or, at a minimum, would have paid significantly less than they did.

144. Each act of deception, as described in this Complaint, constitutes a violation of 18 U.S.C. §§1341 (mail fraud) or 1343 (wire fraud), and constitutes an act of "racketeering activity" as defined in 18 U.S.C. §1961(5).

145. As a result, Plaintiffs and Class members have been injured in their business and property within the meaning of 18 U.S.C. §1964(c). Plaintiffs' and Class members' damages include, but are not limited to: purchasing or leasing Class Vehicles that they would not otherwise have purchased or leased; paying more for Class Vehicles than they would have otherwise paid if they had known the true facts concerning the defeat devices; and purchasing Class Vehicles, the value of which has been severely diminished, thus reducing their residual and/or resale value.

146. Volkswagen's RICO violations directly and proximately caused injury to the business and property of Plaintiffs and Class members, and Plaintiffs and Class members are entitled to three times their actual damages, as well as injunctive and other equitable relief, plus their costs and reasonable attorneys' fees.

FOURTH CLAIM

Violation of the Magnuson-Moss Warranty Act (15 U.S.C.§ 2301 *et seq.*)

147. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

VW FOIA, EPA 06/20/2017 2017-FFP_030843

148. Plaintiffs and the Class bring this claim under the Magnuson-Moss Warranty Act, 15 U.S.C. § 2301 *et seq.*

149. The Class Vehicles are consumer products as defined in 15 U.S.C. §2301(1).

150. Volkswagen is a supplier and warrantor as defined in 15 U.S.C. §2301(4), (5).

151. Plaintiffs and the Class received written warranties as defined in 15 U.S.C. §2301(6)(A) and/or (B), which Volkswagen has breached.

152. Plaintiffs and the Class are "consumers" as defined in 15 U.S.C. §2301(3). They are consumers because they bought a Class Vehicle and are entitled to enforce both written and implied warranties.

153. Pursuant to 15 U.S.C. § 2310(e), Plaintiffs and the Class are not required to provide Defendants notice of this class action and an opportunity to cure until the time the Court determines the representative capacity of Plaintiffs pursuant to Fed.R.Civ.P. 23.

154. Volkswagen is liable to Plaintiffs and the Class pursuant to 15 U.S.C. § 2310(d)(l) because it breached its written warranties.

155. Further, in connection with the sale of the Class Vehicles, Volkswagen gave an implied warranty under the Act. As part of that implied warranty, Volkswagen warranted that the Class Vehicle complied with all applicable federal and state regulations, including emission regulations. Volkswagen breached the implied warranty of merchantability.

156. Plaintiffs and the Class are entitled to damages caused by Volkswagen's breaches of the warranties, including economic damages based upon either a return of Plaintiffs' and Class Members purchase price; and/or the difference between the price paid for the Class Vehicle as warranted and the actual value of the Class Vehicle as delivered, and consequential damages.

157. In addition, Plaintiffs and the Class are entitled to reasonable attorneys' fees and costs as determined by the Court.

VW FOIA, EPA 06/20/2017 2017-FFP_030844

FIFTH CLAIM

Violations of the Consumers Legal Remedies Act (California Civil Code § 1750 *et seq.*)

158. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

159. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

160. This cause of action is brought pursuant to the California Consumers Legal Remedies Act ("CLRA"), Civil Code §1750, *et seq*. Plaintiffs bring this action on their own behalf and on behalf of the California Subclass, all of whom are similarly situated consumers within the meaning of Civil Code §1781.

161. The acts and practices described in this Complaint were intended to result in the sale of goods, specifically a motor vehicle, in consumer transactions. Volkswagen has violated, and continue to violate California Civil Code § 1770, subdivisions (a)(9), (a)(7), (a)(16), and (a)(5) by:

- Representing to consumers purchasing the Class Vehicles that these vehicles' emissions, fuel efficiency and high performance are as advertised and publicized.
- Representing in their advertising emissions, environmental, fuel efficiency and performance characteristics for the Class Vehicles that are false.

162. Plaintiffs Bourn, Watson, and Verner and the California Subclass members have suffered harm as a result of these violations.

163. Plaintiffs Bourn, Watson, and Verner and California Subclass members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Class Vehicles believing, based on Volkswagen's representations, that the Class Vehicles had certain characteristics that made them environmentally friendly, fuel efficient and high performance, when in fact these vehicles cannot have these fuel efficient and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Class Vehicles and the subsequent revelation

VW FOIA, EPA 06/20/2017 2017-FFP_030845

concerning the "defeat devices" will result in lower resale value.

164. Volkswagen concealed from Plaintiffs Bourn, Watson, and Verner accurate information concerning the emissions standards, fuel efficiency and performance of the California Subclass Vehicles.

165. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were intentional, or alternatively, made without the use of reasonable procedures adopted to avoid such errors.

166. Volkswagen, directly or indirectly, has engaged in substantially similar conduct with respect to Plaintiffs Bourn, Watson, and Verner and to each member of the California Subclass.

167. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, members of the consuming public will be further damaged by Volkswagen's conduct.

168. Plaintiffs Bourn, Watson, and Verner and the Class are entitled to equitable relief on behalf of the members of the California Subclass in the form of an order, pursuant to Civil Code §1780, subdivision (a)(2)-(5), prohibiting Volkswagen from continuing to engage in the above-described violations of the CLRA. Plaintiffs Bourn, Watson, and Verner and the California Subclass further seek reasonable attorneys' fees under Civil Code §1780(e).

SIXTH CLAIM

Violation of California Unfair Competition Law (Cal. Bus. & Prof. Code § 17200, *et seq.*)

169. Plaintiffs Bourn, Watson, and Verner incorporate by reference each preceding and succeeding paragraph.

170. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

171. California Business & Professions Code §17200, *et seq.* prohibits acts of "unfair competition" which is defined by California Business & Professions Code § 17200 as including

VW FOIA, EPA 06/20/2017 2017-FFP_030846

any "any unlawful, unfair or fraudulent business act or practice ...."

172. Volkswagen has violated and continues to violate California Business & Professions Code §17200's prohibition against engaging in "unlawful" business acts or practices, by, inter alia, the following:

- Violating the CAA and applicable regulations;
- Violating California's Air Pollution Control laws and applicable regulations;
- Violating the Sherman Act;
- Violating RICO;
- Violating the Magnuson-Moss Act;
- Violating the CLRA; and
- Violating California's False Advertising Law.

173. Volkswagen also acted fraudulently and unfairly for purposes of section 17200. Volkswagen's misrepresentations and omissions regarding the Class Vehicles' emissions, environmental standards, fuel efficiency, and performance in their advertising, public statements and marketing were a material factor in inducing Plaintiffs Bourn, Watson, and Verner to purchase their Class Vehicle. Plaintiffs Bourn, Watson, and Verner suffered injury in fact and lost money and/or property as a result of Volkswagen's unlawful business acts and practices and California Subclass members have suffered harm when each was required to pay a purchase price for their Class Vehicles which they never would have purchased if the true facts were known; or paid a price in excess of what a California Subclass member would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics and in the form of decreased resale value of the Vehicles.

174. As a result of Volkswagen's violations of the California Business & Professions Code §17200, *et seq.*, Plaintiffs Bourn, Watson, and Verner and California Subclass members are entitled to equitable relief in the form of full restitution for the inflated sale price of the Vehicles.

VW FOIA, EPA 06/20/2017 2017-FFP_030847

175. Plaintiffs Bourn, Watson, and Verner and California Subclass members also seek an order enjoining Volkswagen from continuing their unlawful business practices and from such future conduct.

SEVENTH CLAIM

Violation of the California False Advertising Law (Cal. Bus. & Prof. Code § 17500, *et seq.*)

176. Plaintiffs Bourn, Watson, and Verner incorporate by reference each preceding and succeeding paragraph.

177. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

178. Volkswagen violated California's False Advertising Law, Business & Professions Code §17500, *et seq.*by using false and misleading messages regarding the environmental friendliness, emissions, fuel efficiency and performance of the Class Vehicles in television, print, and Internet advertising.

179. These representations and/or omissions have deceived and are likely to deceive Plaintiffs Bourn, Watson, and Verner, the California Subclass, and consumers across the country in connection with their decision to purchase Class Vehicles. Volkswagen's representations and/or omissions were material and constituted a substantial and material factor in Plaintiffs Bourn and Watson's decision to purchase their Class Vehicle. Had Plaintiffs Bourn, Watson, and Verner known the actual facts, they would not have purchased the Class Vehicles and/or paid more than they would have had Volkswagen accurately disclosed the Class Vehicles' true characteristics.

180. Volkswagen directly and indirectly, has engaged in substantially similar conduct with respect to each Plaintiff and to each member of the California Subclass.

181. Plaintiffs Bourn, Watson, and Verner suffered injury in fact and lost money and/or property as a result of Volkswagen's false and misleading advertising and California Subclass members suffered harm when each was required to pay a purchase price in excess of what a

VW FOIA, EPA 06/20/2017 2017-FFP_030848

California Subclass member would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics and in the form of decreased resale value of the Class Vehicles.

182. As a result of Volkswagen's violations, Plaintiffs Bourn, Watson, and Verner and California Subclass members are entitled to equitable relief in the form of full restitution of all monies paid for the sales price of the Vehicles, diminished value of the Class Vehicles, and/or disgorgement of the profits derived from Volkswagen's false and misleading advertising.

183. Plaintiffs Bourn, Watson, and Verner also seek an order enjoining Volkswagen from such future conduct.

EIGHTH CLAIM

Violation of the Virginia Consumer Protection Act (Va. Code Ann. §§59.1-196, *et seq.*)

184. Plaintiff Schumacher incorporates by reference each preceding and succeeding paragraph.

185. Plaintiff Schumacher brings this Claim on behalf of the Virginia Subclass, which is cognizable in this Court pursuant to *Shady Grove Orthopedic Assocs., P.A. v. Allstate Ins. Co.*, 559 U.S. 393 (2010).

186. Defendants are "persons" within the meaning of Va. Code Ann. §59.1-200(A).

187. Volkswagen violated the Virginia Consumer Protection Act, which prohibits "...(5) misrepresenting that goods or services have certain quantities, characteristics, ingredients, uses, or benefits; (6) misrepresenting that goods or services are of a particular standard, quality, grade, style, or model; ... (8) advertising goods or services with intent not to sell them as advertised ...; [and] (14) using any other deception, fraud, false pretense, false promise, or misrepresentation in connection with a consumer transaction[.]" Va. Code Ann. §59.1-200(A).

188. These representations and/or omissions have deceived and are likely to deceive Plaintiff Schumacher, the Virginia Subclass, and consumers across the country in connection with their decision to purchase Class Vehicles. Volkswagen's representations and/or omissions were material and constituted a substantial and material factor in Plaintiff Schumacher's decision to

VW FOIA, EPA 06/20/2017 2017-FFP_030849

purchase their Class Vehicle. Had Plaintiff Schumacher and Virginia Subclass members known the actual facts, they would not have purchased the Class Vehicles and/or would have paid less for them.

189. Volkswagen, directly and indirectly, has engaged in substantially similar conduct with respect to each Plaintiff and to each member of the Virginia Subclass.

190. Plaintiff Schumacher and Virginia Subclass members suffered injury in fact and lost money and/or property as a result of Volkswagen's Violations of the Virginia Consumer Protection Act. Plaintiff Schumacher and Virginia Subclass members suffered harm when each was required to pay a purchase price in excess of what they would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics; they also suffered harm in the form of decreased resale value of the Class Vehicles.

191. As a result of Volkswagen's violations, Plaintiff Schumacher and Virginia Subclass members are entitled to three times the amount of actual damages or $1000, whichever is greater, as well as costs and attorneys' fees. Va. Code Ann. §§59.1-204(a), (b).

NINTH CLAIM
Unjust Enrichment

192. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

193. Plaintiffs bring this claim for unjust enrichment on behalf of the nationwide Class under the common law of unjust enrichment, as there are no true conflicts (case-dispositive differences) among various states' laws of unjust enrichment.

194. In the alternative, Plaintiffs bring this claim on behalf of the nationwide Class under Virginia law, because the Defendants' United States operations are headquartered in Virginia and Virginia has the most significant relationship to the issues and facts relevant to this claim.

195. Volkswagen received and retained a benefit from the Plaintiffs and inequity has resulted.

196. Volkswagen benefitted through its unjust conduct, by selling Class Vehicles subject

VW FOIA, EPA 06/20/2017 2017-FFP_030850

to the misrepresentation that they were EPA- and/or CARB-compliant and by failing to disclose its use of a defeat device in these vehicles.

197. Plaintiffs, were charged a premium based on this misrepresentation, overpaid for these vehicles as a result, and/or would not have purchased these vehicles at all had their noncompliance with federal and state emissions laws been disclosed.

198. It is inequitable for Volkswagen to retain these benefits.

199. Plaintiffs do not have an adequate remedy at law.

200. As a result of Volkswagen's conduct, the amount of its unjust enrichment should be disgorged, in an amount to be proven at trial.

TENTH CLAIM
Unjust Enrichment

201. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

202. Plaintiffs bring this claim for unjust enrichment on behalf of the nationwide Class under the common law of fraudulent concealment, as there are no true conflicts (case-dispositive differences) among various states' laws of fraudulent concealment.

203. In the alternative, Plaintiffs bring this claim on behalf of the nationwide Class under Virginia law, because the Defendants' United States operations are headquartered in Virginia and Virginia has the most significant relationship to the issues and facts relevant to this claim.

204. Volkswagen concealed and suppressed the material facts that the Class Vehicles did not comply with federal and state emissions laws and were spewing illegal amounts of NOx when they were represented to be EPA- and/or CARB-compliant. It also concealed and suppressed the material fact that the Class Vehicles were equipped with a defeat device that prevented their proper testing under laboratory conditions for compliance with federal and state emissions laws and regulations.

205. Volkswagen took the various steps described herein to effectuate that concealment, such as false advertising and in false statements of compliance with federal and state emissions

VW FOIA, EPA 06/20/2017 2017-FFP_030851

laws and regulations affixed to each of the Class Vehicles

206. Volkswagen took steps to ensure that its employees did not reveal these concealed facts to federal and state environmental regulators.

207. Volkswagen had a duty to disclose the concealed information because it:

- Had exclusive and/or far superior knowledge and access to the facts than Plaintiffs and Class Members, and it knew the facts were not known to or reasonably discoverable by Plaintiffs and the Class;
- Intentionally concealed the foregoing from Plaintiffs; and
- Made incomplete representations about the compliance of the Class Vehicles with federal and state emissions laws and regulations, while purposefully withholding material facts from Plaintiffs that contradicted these representations.

208. These omitted and concealed facts were material because they would be relied on by a reasonable person purchasing, leasing or retaining the Class Vehicles, and because they directly impact the price paid for the Class Vehicles and their resale value. Whether the Class Vehicles comply with federal and state emissions laws and regulations is a material concern to a consumer. Plaintiffs and Class Members trusted Volkswagen not to sell or lease them vehicles that were non-compliant.

209. Volkswagen concealed and suppressed these material facts to falsely assure purchasers and consumers that the Class Vehicles complied with federal and state emissions laws and regulations, as represented by Volkswagen and reasonably expected by consumers.

210. Volkswagen actively concealed and/or suppressed these material facts, in whole or in part, to protect its profits and to avoid recalls that would hurt the brand image of the Class Vehicles and cost Volkswagen money. Volkswagen concealed these facts at the expense of Plaintiffs and the Class.

211. Plaintiffs and the Class were unaware of these omitted material facts, and would not have acted as they did if they had known of the concealed and/or suppressed information.

VW FOIA, EPA 06/20/2017 2017-FFP_030852

212. Had they been aware of the non-compliance of the Class Vehicles with federal and state emissions laws and regulations and Volkswagen's callous disregard for those laws and regulations, Plaintiffs and the Class either would have paid less for their Class Vehicles or would not have purchased or leased them at all. Plaintiffs did not receive the benefit of their bargain as a result of Volkswagen's fraudulent concealment.

213. Because of the concealment and/or suppression of the facts, Plaintiffs and the Class sustained damage because they own vehicles that diminished in value as a result of Volkswagen's concealment of, and failure to timely disclose, the non-compliance of the Class Vehicles with federal and state emissions laws and regulations.

214. The value of all Class members' Class Vehicles has diminished as a result of Volkswagen's fraudulent concealment of the non-compliance of the Class Vehicles with federal and state emissions laws and regulations and has made any reasonable consumer reluctant to purchase any of the Class Vehicles, let alone pay what otherwise would have been fair market value for the vehicles.

215. Accordingly, Volkswagen is liable to the Class for their damages in an amount to be proven at trial.

216. Volkswagen's acts were done maliciously, oppressively, deliberately, with intent to defraud, and in reckless disregard of Plaintiffs' and the Class's rights and well-being, and with the aim of enriching Volkswagen. Volkswagen's conduct, which exhibits the highest degree of reprehensibility, being intentional, continuous, placing others at risk of death and injury, and affecting public safety, warrants an assessment of punitive damages in an amount sufficient to deter such conduct in the future, which amount is to be determined according to proof.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray that the Court enter judgment on their behalf and on behalf of the Class and the California and Virginia Subclasses, and:

A. Order the appointment of an independent External Compliance Monitor to monitor

VW FOIA, EPA 06/20/2017 2017-FFP_030853

Volkswagen's compliance with federal and state environmental laws;

B. Order Volkswagen to pay a portion of its annual net profits into an independent fund administered by third parties approved by the Court who can disburse the funds to non-profit organizations that seek to monitor, educate people about, and/or remediate the deleterious environmental effects of vehicular diesel fuel emissions;

C. Order that this action may proceed as a class action, with Plaintiffs as the designated Class representatives for the Class; Plaintiffs Bourn, Watson, and Verner as designated Class representatives for the California Subclass; Plaintiff Schumacher as designated Class representative for the Virginia Subclass, and Plaintiffs' counsel as Class and Subclass Counsel;

D. Adjudge and decree that Volkswagen has violated the CAA, California Pollution Control laws, the Sherman Act, RICO, the Magnuson-Moss Act, the CLRA, California's Unfair Competition Law, California's False Advertising Law; the Virginia Consumer Protection Act, and the common law of unjust enrichment and fraudulent concealment and that Plaintiffs and the members of the Class and the California and Virginia Subclasses have been injured in their business and property as a result of Volkswagen's violations;

E. Order that Plaintiffs and the members of the National Class and California Subclass recover damages sustained by them, to the extent provided by law, and that a judgment in favor of Plaintiffs and the Class and the California and Virginia Subclasses be entered against Volkswagen in an amount to be trebled in accordance with such laws;

F. To the extent provided by law, enjoin and restrain Volkswagen, its subsidiaries, affiliates, successors, transferees, assignees and the respective officers, directors, partners, agents, and employees thereof and all other persons acting or claiming to act on their behalf from continuing to violate the CAA, California Pollution Control laws, the Sherman Act, RICO, the Magnuson-Moss Act, CLRA, California's Unfair Competition Law, California's False Advertising Law, the Virginia Consumer Protection Act, and the common law of unjust enrichment and fraudulent concealment;

VW FOIA, EPA 06/20/2017 2017-FFP_030854

G. Order Volkswagen to pay restitution or damages to Plaintiffs and members of the Class and the California and Virginia Subclasses and to disgorge the profits unlawfully acquired and retained by Volkswagen;

H. Award Plaintiffs and members of the Class and the California and Virginia Subclasses pre-judgment and post-judgment interest, and order that such interest be awarded at the highest legal rate from and after the date of service of the initial complaint in this action;

I. Award Plaintiffs and members of the Class and the California and Virginia Subclasses their costs of this suit, including reasonable attorneys' fees as provided by law; and

J. Order such other or further relief as may be just and proper.

IX. JURY TRIAL DEMAND.

Pursuant to Federal Rule of Civil Procedure 38(b), Plaintiffs demand a trial by jury of all of the claims asserted in this Complaint so triable.

DATED: October 6, 2015

CLERK US DISTRICT COURT
ALEXANDRIA, VIRGINIA

IN THE UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF VIRGINIA
Alexandria Division

MARIA BOURN, DAVID WATSON, STEPHEN VERNER, and MARK SCHUMACHER, on behalf of themselves and all others similarly situated,

Plaintiffs,

v.

VOLKSWAGEN AG, VOLKSWAGEN OF AMERICA GROUP, INC., VOLKSWAGEN OF AMERICA, INC., AUDI OF AMERICA, LLC, and AUDI AG,

Defendants.

Case No. 1:15cv1295

JURY TRIAL DEMANDED

LOG/MSN

CLASS ACTION COMPLAINT

Plaintiffs Maria Bourn, David Watson, Steven Verner, and Mark Schumacher bring this action on their own behalf and on behalf of a class of similarly situated persons against Volkswagen AG ("VWAG"), Volkswagen of America Group, Inc. and Volkswagen of America, Inc. (collectively, "VWoA"), and Audi of America, LLC and Audi AG (collectively, "Audi").[1] Plaintiffs seek injunctive relief and to recover damages caused by Volkswagen's violations of Section 2 of the Sherman Antitrust Act (15 U.S.C. § 2), the Racketeer Influenced and Corrupt Organizations Act ("RICO") (18 U.S.C. § 1961 *et seq.*), the Magnuson-Moss Warranty Act (15 U.S.C. § 2301 *et seq.*), the common law of fraud and unjust enrichment. and the statutory laws of California and Virginia. Plaintiffs make the following allegations upon information and belief,

[1] Unless otherwise indicated herein, all of these defendants will be referred to collectively as "Volkswagen."

VW FOIA, EPA 06/20/2017 2017-FFP_030857

except as to those allegations pertaining to the named plaintiffs, which are made on personal knowledge.

I. NATURE OF THE ACTION.

1. Four years ago, Martin Winterkorn ("Winterkorn"), Volkswagen's former Chief Executive Officer ("CEO"), announced Volkswagen's goal to become the world's largest automaker. "By 2018," he told U.S. politicians gathered for the opening of a Volkswagen plant in Chattanooga, Tennessee, "we want to take our group to the very top of the global car industry."[2] With only a relatively small share of the gigantic United States market, Winterkorn's ambitious plan required a dramatic increase in sales in that market. And the way to increase sales here, Volkswagen decided, was to convince American consumers that its diesel-powered cars were a superior alternative, with better fuel efficiency, lower emissions, and uncompromised performance.

2. Between 2009 and September 18, 2015, Volkswagen aggressively marketed its so-called Clean Diesel Turbocharged Direct Injection ("TDI") light passenger vehicles in the United States, spending millions of dollars on print, television, internet and point-of-sale advertising aimed at convincing American consumers that its cars were environmentally-friendly, fuel-efficient, powerful, and reasonably priced. In order to increase its market share, Volkswagen's cars needed all those attributes to win over a skeptical American public. Compared with Europe, with its higher fuel costs, expensive cars and less stringent tailpipe emission standards, the United States market was a tough sell for diesel-powered passenger cars.

3. Until September 18, 2015, it looked as if Winterkorn's ambitious plan had succeeded. In July of 2015, Volkswagen surpassed Toyota Corporation ("Toyota") as the world's largest automaker, selling 5.04 million vehicles in the first six months of this year, compared to

[2] http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

VW FOIA, EPA 06/20/2017 2017-FFP_030858

Toyota's 5.02 million.[3]

4. As noted above, the United States was a key part of this global strategy. As reported in *Automotive News*:

> Back in 2007, the automaker vowed to crank up U.S. sales of its VW brand to 800,000 vehicles a year by 2018. It was a dizzying sum, requiring more than a tripling of its volume at that time. Many in the industry scoffed.
>
> But with steady precision, VW got the skeptics to take a second look. It launched a lower-priced, Mexico-made Jetta and built a plant in Chattanooga that began churning out a new Passat that better fit American tastes and budgets. VW sales doubled between 2009 and 2012, to nearly 440,000, lifting hopes that 800,000 was doable.[4]

By October 1, 2015, VWoA had reported sales of 264, 215 passenger vehicles in the United States through September 15, indicating that before the scandal that is the subject of this Complaint surfaced, it was expecting another excellent sales year.[5]

5. Unfortunately for American consumers, Volkswagen's success in capturing market share was based on a lie. On September 18, 2015, the United States Environmental Protection Agency ("EPA") and the California Air Resources Board ("CARB") both notified Volkswagen that it had violated federal and state laws and regulations by using a "defeat device"--software specifically intended to circumvent emission test procedures established by the EPA and by CARB. Those notices are attached as Exhibits 1 and 2 to this complaint.

6. Volkswagen's "defeat device" is a "sophisticated software algorithm"[6] that detects

---

[3] http://www.usatoday.com/story/money/2015/07/28/volkswagen-surpasses-toyota-worlds-largest-automaker-first-half-2015/30772509/.

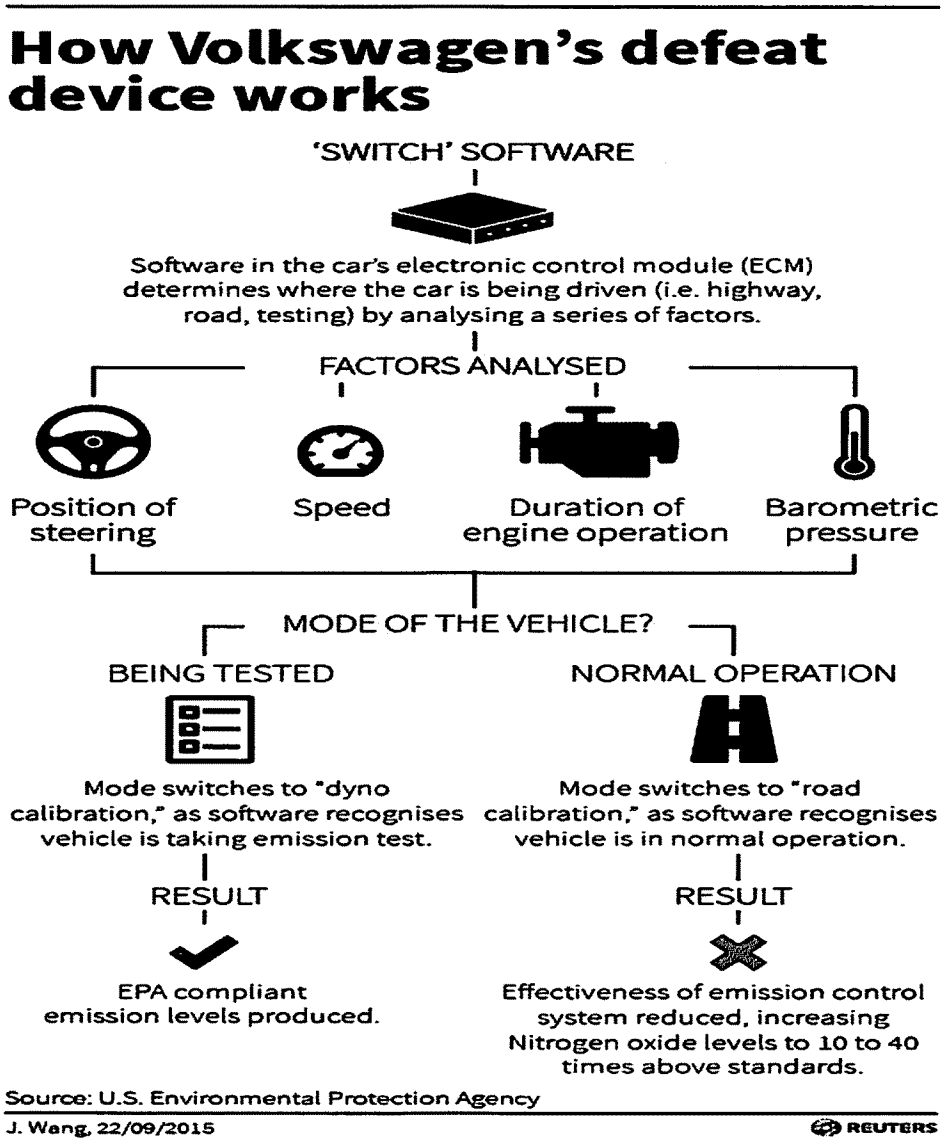
[4] http://www.autonews.com/article/20150126/RETAIL01/301269949/how-vw-veered--off-target.

[5] http://media.vw.com/release/1080/.

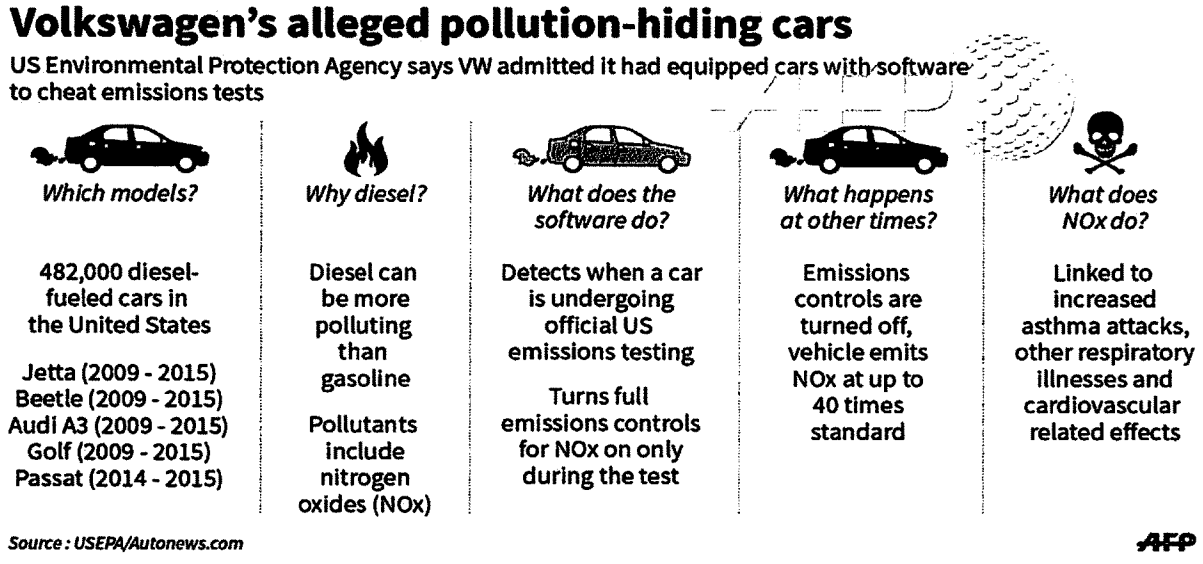
[6] http://www.theguardian.com/business/2015/sep/18/epa-california-investigate-volkswagen-clean-air-violations.

VW FOIA, EPA 06/20/2017 2017-FFP_030859

when the car is undergoing emissions testing. Under such laboratory test conditions, Volkswagen's vehicles pass the EPA and CARB emissions tests with flying colors. Under normal driving situations, however, the software algorithm ***turns off*** the emissions control systems, allowing the cars to spew as much as 40 times the allowable amount of pollutants--specifically nitrogen oxides ("NOx")--into the air. Elevated NOx contributes to the creation of ozone and smog, and is linked to asthma attacks, other respiratory diseases such as emphysema and bronchitis, and causes premature death. A diagram published in Reuters depicts its operation:



7. The chart below, published by *Agence France Press*, provides a useful and concise primer on the known facts:



8. As noted below, dozens of fatalities in the United States over the last seven years have been attributed to the illegal use of this "defeat device." The scandal has been popularly referred to as "Dieselgate."

9. Volkswagen has admitted to installing these "defeat devices" in 11 million diesel vehicles that have been sold around the world, including the 482,000 in the United States. As Michael Horn ("Horn"), the President and CEO of VWoA, candidly admitted: "[l]et's be clear about this. **Our company was dishonest. With the EPA, and the California Air Resources Board, and with all of you. And in my German words, we have totally screwed up.**"[7] (Emphases added). Horn further stated in a video on VWAG's website that **"[o]ur company**

[7] http://www.roadandtrack.com/new-cars/car-technology/news/a26774/volkswagen-ceo-we-screwed-up/. A YouTube video of this extraordinary concession can be found here: www.youtube.com/watch?v=Q6z8uUJE-jE.

betrayed the trust of you, our customers, our employees, our dealers and the public."[8] (Emphases added). And as VWAG has posted on its website: "[g]overnment regulations limit the use of engine software that reduces the effectiveness of a vehicle's emissions control systems. **Those are the 'defeat device' regulations, and regrettably, VW violated those regulations. We take full responsibility** – and deeply regret that this happened."[9] (Emphases added). In a September 23, 2015 press release available on VWAG's website, the Executive Committee of VWAG's Supervisory Board ("Board") stated: "[t]he Executive Committee takes this matter extremely seriously. **The Executive Committee recognizes not only the economic damage caused, but also the loss of trust among many customers worldwide.**"[10] (Emphases added). Or, as Berthold Huber ("Huber"), Deputy Chairman of the Board, was quoted as saying in a September 25 press release, **"[t]he test manipulations are a moral and political disaster for Volkswagen. The unlawful behavior of engineers and technicians involved in engine development shocked Volkswagen just as much as it shocked the public."** [11] (Emphases added).

10. In light of the scandal, VWAG's Board forced Winterkorn to resign as CEO of VWAG on September 23.[12] In doing so, he stated that "**I accept responsibility for the irregularities that have been found in diesel engines.**" (Emphases added). [13] He further observed

[12] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html

[13] http://www.nytimes.com/2015/09/24/business/international/volkswagen-chief-martin-winterkorn-resigns-amid-emissions-scandal.html. Notably, however, Winterkorn plans to stay as the Chairman of the Board of Directors of Porsche Automobil Holding SE, which owns a 52% controlling stake in VWAG; he is also still demanding payment of the ten million Euros owed to him under his employment contract, which does not expire until 2016.

that "**[m]illions of people across the world trust our brands, our cars and our technologies. I am endlessly sorry that we have disappointed this trust. I apologize in every way to our customers, to authorities and the whole public for the wrongdoing.**"[14] (Emphases added). He professed surprise that "**misconduct on such a scale**" (emphases added) occurred within the Volkswagen group, suggesting that he had no knowledge of it.[15] It has been reported that Winterkorn was being investigated for fraud in connection with the conduct at issue here by prosecutors in Lower Saxony; however, more recently, those prosecutors have stated that any prosecution will await further factual information.[16]

11. Volkswagen has ordered its authorized dealers ("Volkswagen Authorized Dealers") to cease selling the vehicles in which the defeat devices are installed. These include at least the VW Jetta TDI (Model Years 2009-15), the VW Jetta SportWagen TDI (Model Years 2009-14), the VW Golf TDI (Model Years 2010-15), the VW Golf SportWagen TDI (Model Year 2015), the VW Beetle TDI and VW Beetle Convertible TDI (Model Years 2012-15), the VW Passat TDI (Model Years 2012-15) and the Audi A3 TDI (Model Years 2010-15).[17] These affected vehicles will be referred to in this Complaint as the "Class Vehicles."

12. Volkswagen's internal investigation has resulted so far in the suspension of three

VW FOIA, EPA 06/20/2017 2017-FFP_030863

executives: (a) Heinz-Jakob Neusser ("Neusser"); (b) Ulrich Hackenberg ("Hackenberg"); and (c) Wolfgang Hatz ("Hatz").[18] Spiegel Online described Hackenberg's departure, which was also typical of the others: "[h]e received news of his immediate suspension from the personnel department and was asked to turn in his company phone and leave his office. He has also been told not to set foot on company premises."[19]

13. None of these people are mere obscure midlevel engineers. Hackenberg is a VWAG Board member for Technical Development.[20] The same Spiegel Online article described Hackenberg as "a long-time confidant of Winterkorn and, up until just a few days ago, one of the most powerful men at VW." Hatz is a Porsche AG ("Porsche") Board of Management member in charge of Research and Development and is additionally Head of Engines and Transmissions Development for the Volkswagen Group.[21] Neusser was responsible for engine development at Porsche commencing in 1998 and drivetrain development commencing in 2011; in October of 2012, he succeeded Hatz as Head of Powertrain Development at the Volkswagen Group.[22]

14. The same Spiegel Online article notes that Hans-Dieter Pötsch ("Pötsch"), the VWAG Finance Chief and Board Chairman of VWAG, may also be under investigation by regulatory authorities. As discussed below, Volkswagen told the EPA about the use of a defeat device on September 3, but disclosed it publicly only on September 20. "[T]he finance chief

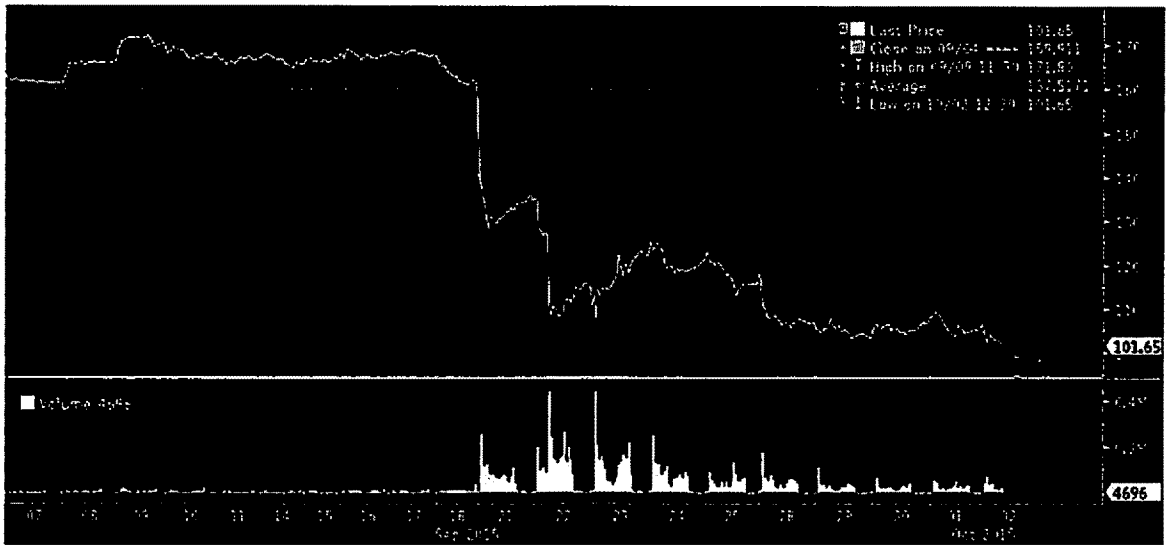
[20] http://www.audi.com/corporate/en/company/corporate-management/members-of-the-board/ulrich-hackenberg.html.

[21] http://press.porsche.com/more_about/executives/pag/hatz.php.

[22] http://www.volkswagenag.com/content/vwcorp/info_center/en/news/2012/09/Dr_Heinz_Jakob_Neusser.html.

remained silent for 17 days. During these 17 days, hundreds of thousands of investors bought VW stock. When the scandal was finally made public on Sept. 20, the price of VW shares plunged by 40 percent, costing stockholders €35 billion."[23] VWAG's shares have been on a steady decline ever since, as reflected in this graphic from the *Telegraph* in the United Kingdom:



15. According to an October 3 article from Reuters, "[a]t an internal company meeting this week at the VW headquarters in Wolfsburg, Pötsch described the situation as an 'existence-threatening crisis for the company', Germany's Welt am Sonntag reported in a release ahead of Sunday's publication."[24]

[23] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html.

[24] http://mobile.reuters.com/article/idUSKCN0RX0GQ20151004. Pötsch's accession to the VWAG Board has been criticized. Hans-Christoph Hirt, a director of Hermes Equity Ownership Services, an adviser to pension fund investors in companies including Volkswagen, said the appointment created a "serious conflict of interest": "[Pötsch] was a key VW executive for more than a decade and under German law the management board has a collective responsibility . . . The lawyers will surely demand that he recuse himself from any supervisory board meetings when management's role is discussed."

16. As explained below, and contrary to the suggestions of some of Volkswagen's spokespersons, the unlawful conduct here was not the action of renegade lower-level employees. It was instead the product of a concerted scheme by top executives at Volkswagen to save costs through use of the TDI technology, break into the United States diesel passenger car market by concealing from regulators and the public the inability of cars using that technology to meet federal and state emissions standards, market the TDI cars through an elaborate seven-year long campaign of false advertising and lying to state and federal officials, and thereby obtain a monopoly share of the United States Clean Diesel passenger car market.

17. The German periodical *Bild am Sonntag* revealed that Robert Bosch GmbH ("Bosch"), the supplier of some components of the emissions control system, used by Volkswagen in TDI diesel vehicles, also supplied Volkswagen with diesel software for test purposes. Bosch reportedly told VWAG in 2007 that using that software in vehicles on the road would be illegal.[25] Similarly, *Süddeutsche Zeitung* has reported that Neusser had ignored least one Volkswagen engineer's warnings over "possibly illegal" practices in 2011.[26] Spiegel Online reported that groups within Volkswagen knew of potential issues as far back as 2005 or 2006.[27] Olaf Lies, a VWAG Board member, has stated publicly that **"[t]hose people who allowed this to happen, or who made the decision to install this software--they acted criminally. They must take personal responsibility**."[28] (Emphases added).

18. As discussed in further detail below, Volkswagen has set aside the inadequate sum of 6.5 billion Euros (approximately $7.2 billion) to deal with the fallout from this fraud. Numerous countries across the world are investigating the matter and here, in the United States, probes are being conducted by the United States Department of Justice ("DOJ"), a coalition of state attorneys general ("AGs"), and members of the United States House of Representatives. The EPA has ordered a recall.

II. THE PARTIES.

A. Plaintiffs.

19. Plaintiffs Maria Bourn ("Bourn") and David Watson ("Watson") are residents of South San Francisco, California. Bourn is a lawyer in San Francisco. Watson is a teacher. In 2015, Bourn and Watson, who are married, purchased a certified, pre-owned 2010 Model Year Jetta SportsWagen from Stevens Creek Volkswagen in San Jose, California. Stevens Creek Volkswagen is a Volkswagen Authorized Dealer. Plaintiffs purchased the SportsWagen in reliance on Volkswagen's representations that the car was an environmentally-friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. They would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

20. Plaintiff Mark Schumacher ("Schumacher") resides in Gainesville, Virginia. In 2012, he purchased a 2012 Model Year Volkswagen Passat SE TDI. Schumacher purchased the Passat from Lindsay Volkswagen in Sterling, Virginia. That company is a Volkswagen Authorized Dealer.Plaintiff Schumacher purchased the Passat in reliance on Volkswagen's representations that the car was an environmentally-friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. He would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

21. Plaintiff Stephen Verner ("Verner") is an architect and resident of Oakland,

VW FOIA, EPA 06/20/2017 2017-FFP_030867

California. In 2013, he purchased a TDI Golf four door from Royal Motor Sales in San Francisco, California. Royal Motor Sales is an Authorized Volkswagen Dealer. Verner purchased the Golf in reliance on Volkswagen's representations that the car was an environmentally friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. He would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

B. Defendants.

22. Defendant VWAG is a car corporation organized and existing under German law, with its principal place of business in Wolfsburg, Germany. VWAG is the parent company of Defendants VWoA and Audi.

23. Defendant Audi AG is a car corporation organized and existing under German law, with its principal place of business in Ingolstadt, Germany. Audi was created when VWAG merged two of its companies, Auto Union and NSU Motorenwerke AG. Audi is a 99.55%-owned subsidiary of the Volkswagen Group. Audi is now Volkswagen's luxury vehicle brand, and uses the slogan "Truth in Engineering".

24. Defendant the Volkswagen Group of America, Inc. is a corporation organized and existing under New Jersey law. Its headquarters are in Herndon, Virginia. The Volkswagen Group of America, Inc. is a wholly-owned subsidiary of VWAG. It is one of the world's largest producers of passenger cars. It sells the Beetle, Beetle Convertible, CC, Eos, e-Golf, Golf, Golf GTI, Golf SportWagen, Jetta, Passat, Tiguan, and Touareg vehicles through Volkswagen Authorized Dealers located in the United States. Volkswagen Group of America, Inc.'s operations in the United States include research and development; parts and vehicle processing; parts distribution; sales, marketing and service offices; financial service centers; and manufacturing.

25. Defendant Volkswagen of America, Inc. is owned and operated by the Volkswagen Group of America, Inc. and sells Volkswagen vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

VW FOIA, EPA 06/20/2017 2017-FFP_030868

26. Defendant Audi of America, LLC is a subsidiary of Audi AG that sells Audi vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

III. JURISDICTION AND VENUE.

27. This Court has jurisdiction over this action pursuant to 28 U.S.C. §§ 1331, 1332(d), 1337(a) and 1367. This court also has supplemental jurisdiction pursuant to 28 U.S.C. §1367(a).

28. Venue is proper in this judicial district and in the Alexandria Division thereof pursuant to 15 U.S.C. §§ 15 and 22, and 28 U.S.C. § 1391(b) and (c), in that at least one of the Defendants resides in this judicial district, is licensed to do business or is doing business in this judicial district.

IV. TRADE AND COMMERCE.

29. Approximately 482,000 Class Vehicles have been sold or leased in the United States in a continuous and uninterrupted flow of interstate commerce and foreign commerce during the last seven years, including through and into this judicial district. The business activities of the Defendants substantially affected interstate trade and commerce in the United States and caused antitrust injury in the United States.

V. FACTUAL ALLEGATIONS.

A. Automobile Emissions Regulations in the United States.

30. Congress enacted the first major Clean Air Act ("CAA") and established the EPA in 1970. The CAA, amended in 1975 and 1990, requires vehicle manufacturers to certify to the EPA that their cars and trucks will meet applicable federal emission standards.[29] The EPA administers a certification program to ensure that every vehicle complies with its emission standards. EPA-issued certificates of conformity are required for every vehicle sold in the United States, and the EPA must approve every vehicle entering United States commerce. In these

[29] http://www2.epa.gov/laws-regulations/summary-clean-air-act.

VW FOIA, EPA 06/20/2017 2017-FFP_030869

certification efforts, the EPA relies on test data submitted by automobile manufacturers, which submit the vehicles to the agency's testing procedures in their own laboratories. The EPA audits a small fraction of the new vehicles each year to ensure compliance.[30]

31. The Class Vehicles, like any other car sold in the United States, were required to satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. §86.1811-4; Clean Air Act §101(b)(1) – (2), 42 U.S.C. §7401(b)(1)(2).

32. Section 203(a)(3)(b) of the CAA prohibits the manufacture, selling, or installation of any device that bypasses, defeats or renders inoperative a required element of a vehicle's emissions control system. 42 U.S.C. §7522(a)(3)(b). Section 203(a)(10 of the same statute also prohibits the sale of motor vehicles or engines that are not covered by valid certificates of conformity with applicable emissions standards. 42 U.S.C. §7522(a)(1). The regulatory requirements for defeat devices are set forth in 40 C.F.R. Part 86.

33. The EPA has been rigorous in punishing automobile manufacturers or engine makers that utilize defeat devices. For example, in late 1995, it entered into a $45 million dollar settlement with General Motors Corporation regarding the use of defeat devices on 470,000 Cadillac cars.[31] Likewise, in August of 1998, it fined Honda $267 million and Ford $7.8 million for selling vehicles equipped with defeat devices that prevented emission control systems from working properly.[32] Similarly, in October of that year, it and the DOJ fined seven truck and heavy duty equipment manufacturers $83.4 million for engaging in similar conduct.[33]

---

[30] http://www.autonews.com/article/20151004/OEM11/310059955/vw-emissions-violations-put-self-certification-under-new-scrutiny.

[31] http://www.autosafety.org/sites/default/files/imce_staff_uploads/Cadillac%20%2445%20Million%20Defeat%20Device%20Penalty%2011-31-95.pdf.

[33] http://www2.epa.gov/enforcement/cummins-engine-company-diesel-engine-clean-air-act-settlement.

VW FOIA, EPA 06/20/2017 2017-FFP_030870

34. Volkswagen was or should have been aware of these precedents. Indeed, the company itself is a recidivist violator of the CAA. In July of 1973, the EPA referred to DOJ for legal action a claim that defeat devices were installed on 1973 Volkswagens. A copy of that referral is attached as Exhibit 3 to this complaint. The matter was settled for $120,000 in March of 1974.[34] Similarly, in June of 2005, Volkswagen entered into a consent decree with DOJ whereby it paid a $1.1 million penalty concerning its failure to notify the EPA of emissions defects in certain vehicles manufactured at its facility in Mexico.[35] A copy of that decree is attached as Exhibit 4 to this Complaint.

35. CARB is a department of the California Environmental Protection Agency. It was created in 1967. California is the only state permitted to have such a regulatory agency, because it was created prior to the enactment of the CAA. CARB's mission is to "[t]o promote and protect public health, welfare and ecological resources through the effective and efficient reduction of air pollutants while recognizing and considering the effects on the economy of the state."[36]

36. The EPA introduced phased in Tier 2 emissions standards from 2004 to 2009. California has similar standards in its CA LEV II standard. The Tier 2 Bin rating system applied to all passenger vehicles regardless of fuel type. Tier 2 Bin 5 standards--the ones applicable to the Class Vehicles--imposed an emission rate for NOx of 0.07 grams per mile.[37]

37. New cars that are sold bear stickers indicating that they are EPA-and/or CARB compliant. Here is a photograph of such a sticker on the inside of the hood of a TDI Audi A3, one of the Class Vehicles.

---

[34] http://www.autosafety.org/sites/default/files/imce_staff_uploads/VW%20Defeat%20Device%20%24120%2C00%20fine%203-12-74%20Pr.pdf.

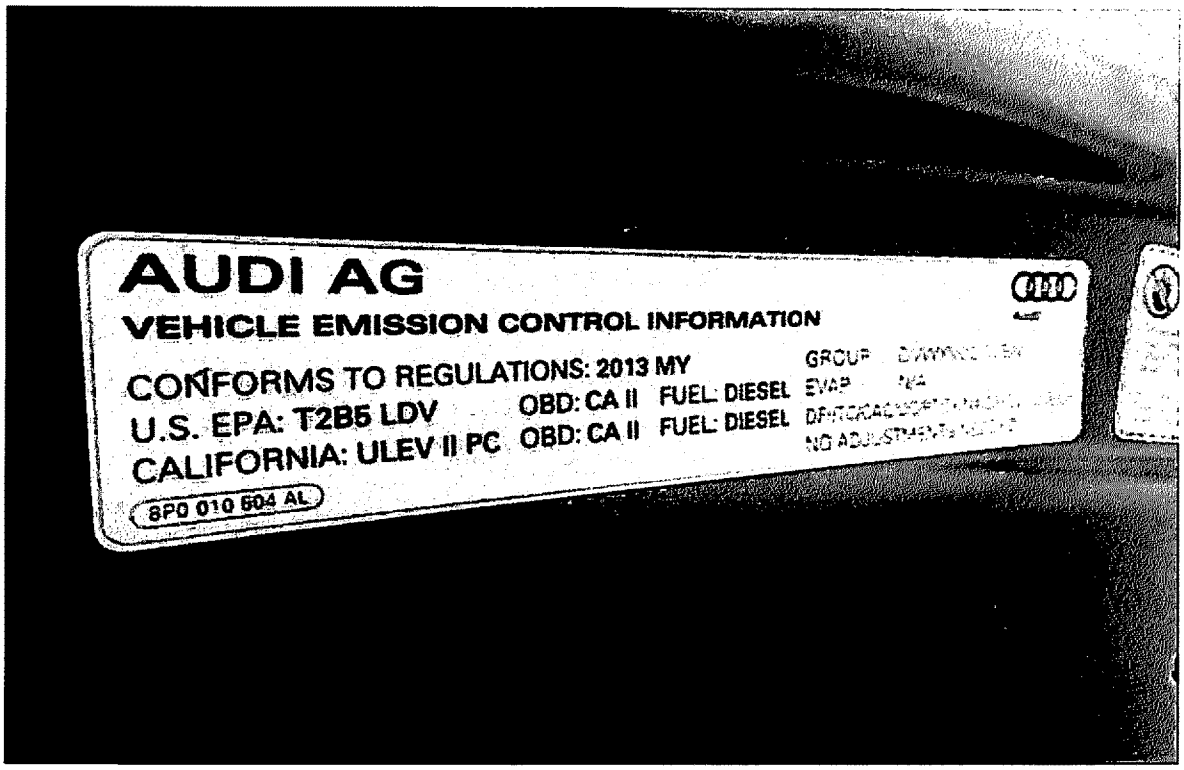
[37] http://www.nctcog.org/TRANS/air/vehicles/tech/compliance/index.asp.

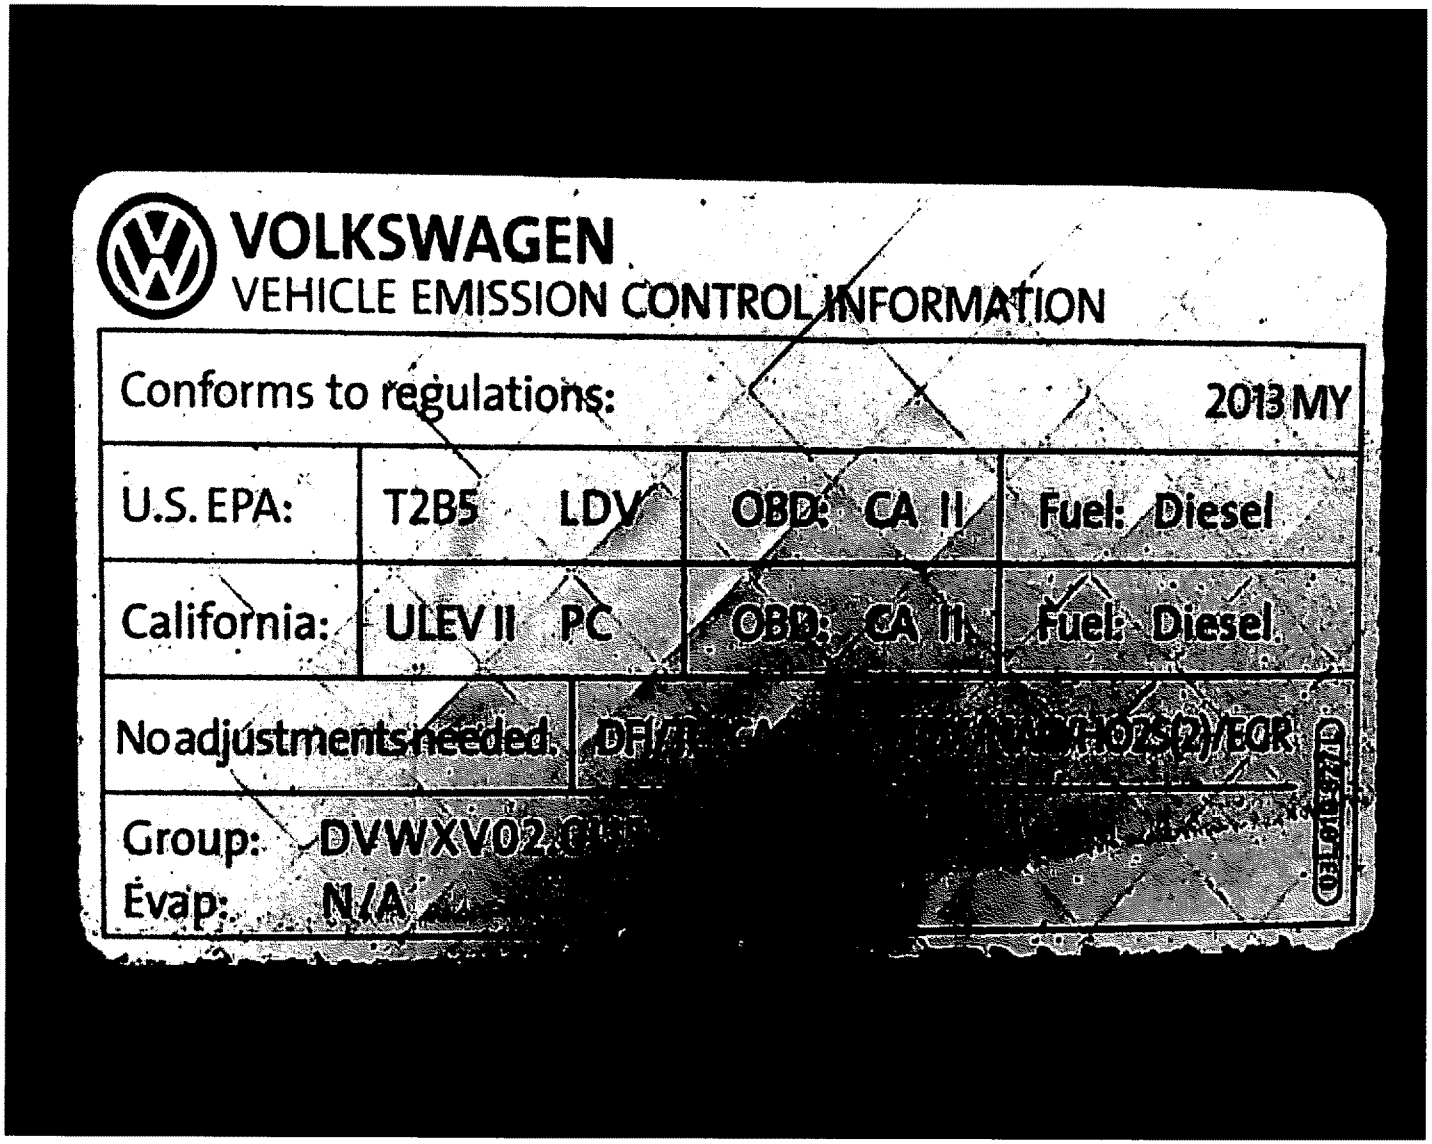


And here is a similar sticker for a 2013 TDI Volkswagen Golf:

//

//

//



VOLKSWAGEN
VEHICLE EMISSION CONTROL INFORMATION

Conforms to regulations:			2013 MY
U.S. EPA:	T2B5 LDV	OBD: CA II	Fuel: Diesel
California:	ULEV II PC	OBD: CA II	Fuel: Diesel
No adjustments needed.	DFI/TC/CAC/DOC/CPF/SCR/EGR		
Group: DVWXV02.0U4			
Evap: N/A			

Through these types of notice, Volkswagen was representing to customers that the Class Vehicles complied with federal and state emissions laws. This was an outright lie.

B. Diesel Cars And Control of NOx Emissions.

38. Diesel-powered cars, like gasoline-powered cars, must also meet the emissions standards established by the EPA and CARB. With diesel-powered engines, car manufacturers must use different--and more expensive--emission control systems than are used in gasoline-powered cars.

39. Diesel fuel has a greater energy density than gasoline. It converts heat into energy more efficiently than gasoline, sending less heat out of the tailpipe than gas-powered vehicles. Because it has greater energy density, diesel also is more efficient: diesel vehicles can get up to 30% more miles per gallon than similar gasoline-powered cars. In addition, because of their higher compression, diesel engines can generate a lot of torque, providing strong acceleration and additional power needed for towing.

40. While diesel vehicles have certain advantages over gasoline, they also have some disadvantages. Because diesel fuel is heavier and oilier than gasoline, it can generate more pollution. While diesel engines emit lower amounts of carbon monoxide than gasoline-powered engines, they emit more NOx.

41. Diesel fuel exhaust has been recognized by the World Health Organization to be a carcinogen for humans.[38]

42. Automakers have faced significant challenges in controlling NOx emissions sufficiently to meet environmental standards, particularly with smaller vehicles, and particularly in the United States, which has some of the strictest emission controls in the world. The website of greencongress.com explains the two types of approaches diesel automobile manufacturers have used to deal with NOx emissions:

[38] http://www.iarc.fr/en/media-centre/pr/2012/pdfs/pr213_E.pdf.

VW FOIA, EPA 06/20/2017 2017-FFP_030874

> Broadly, there have been two catalytic approaches used to reduce exhaust NO_x: urea-based selective catalytic reduction (SCR) and lean NO_x trap (LNT) catalysts.
>
> --The urea-SCR (urea=AdBlue) approach requires on-board storage of the reductant fluid which is introduced into the exhaust upstream of the SCR catalyst. It is then converted to ammonia which interacts with NO_x on the SCR catalyst to form water and nitrogen.
>
> --LNT technology utilizes fuel from the vehicle and advanced engine controls to enable periodic operation of the engine at rich air-to-fuel ratios to produce oxygen-depleted exhaust suitable for reducing NO_x stored on the LNT catalyst surface.[39]

43. The article indicates that Volkswagen had planned to use both technologies as of 2007, but elected to go with the LNT approach (which it referred to as TDI). As explained below, the deciding factor was apparently cost. Because of the extra equipment (including a urea tank) and technology required to clean the NOx emissions from the diesel exhaust, SCRs can add significantly to the cost of producing the engine. They also make diesel cars heavier than they otherwise would be, thus potentially decreasing fuel efficiency, torque and power.

44. Honda, which sells diesel cars in markets other than the United States, never tried to sell them here. That is because, according to Honda's research, "[t]he market would not bear the costs of doing diesel correctly." In order to meet the stringent United States emissions standards, Honda would have had to add costly emissions controls to every diesel model, which would make them more expensive than gasoline-powered competitors. "At such a high premium, customers simply wouldn't buy them."[40]

C. Volkswagen's Decision To Use TDI Technology.

45. Volkswagen has been selling cars in the United States since 1949, when it introduced the iconic Volkswagen Beetle. Although it was for many years the top-selling imported car in the United States, Japanese imports overtook Volkswagen and other European imports in

---

[39] http://www.greencarcongress.com/2015/09/20150921-vw2l.html.

[40] http://mashable.com/2015/09/27/vw-dieselgate/#2VosDbcL7iqT.

the 1990s.

46. The decisive factor in the decision to use TDI technology in 2007-08 was the appointment of Winterkorn as CEO of VWAG in January of 2007. Winterkorn was involved in overseeing research and development and had that responsibility at the time he resigned as CEO. In 1995, he took over as the head of Volkswagen Group Product management and a year later, he assumed the role of Member of the Board of Management for "Technical Development" at the Volkswagen brand. He assumed a similar role when he became Chairman of the Board of Management at Audi.[41]

47. Before Winterkorn took over as VWAG's CEO on January in 2007, Volkswagen had partnered with Bosch and Daimler to explore the use of a diesel emissions control system called BlueTec.[42] BlueTec was a technology developed by the latter two companies and championed by Wolfgang Bernhard ("Bernhard"), former head of the Volkswagen brand and a former Daimler executive. BlueTec was an SCR technology; it required the use of a liquid urea tank, so that urea could be sprayed onto the emissions in order to neutralize the NOx. The urea tank not only takes up space and adds weight (disadvantages that are especially acute in the market for small, fuel-efficient cars), but also requires the owner to refill the tank, making the diesel engine more inconvenient than a traditional gasoline-powered car. When Bernhard left the company after Winterkorn took control, the BlueTec technology was scrapped for smaller vehicles. Volkswagen only began using a form of SCR technology on a few of its smaller vehicles in 2012.

48. *Automotive News* describes the sequence of events:

> *Bild am Sonntag* said the roots of the crisis were planted in 2005 when then-VW brand Chief Wolfgang Bernhard wanted VW to

---

[41] *See* http://www.volkswagenag.com/content/vwcorp/content/en/the_group/senior_management/winterkorn.html.

[42] For the source of this information, *see* http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

VW FOIA, EPA 06/20/2017 2017-FFP_030876

> develop a new diesel engine for the U.S. market. Bernhard recruited Audi engineer Rudolf Krebs who developed a prototype that performed well in tests in South Africa in 2006, the paper said.
>
> Bernhard and Krebs argued that the only way to make the engine meet U.S. emission standards was to employ in the engine system an AdBlue urea solution used on larger diesel models such as the Passat and Touareg, according to the report.
>
> This would have added a cost of 300 euros ($335 in today's U.S. dollars) per vehicle -- a sum that VW finance officials said was too much at a time when a companywide cost-cutting exercise was under way.
>
> Bernhard left VW in January 2007 before the diesel engine went into production. Krebs was moved to another role when Martin Winterkorn became VW Group and brand CEO in 2007.
>
> Winterkorn, Audi's former CEO, asked Audi development boss Ulrich Hackenberg and Audi engine boss Wolfgang Hatz to move to VW's Wolfsburg headquarters and continue development work on the engine, *Bild am Sonntag* said.
>
> The engine then ended up in VW Group diesels with its engine software manipulated to fool diesel emissions tests in the U.S.[43]

Hatz and Hackenberg, as noted above, were two of the executives whom VWAG recently suspended.

49. Engineers at Volkswagen had been looking at an alternative to BlueTec technology, an alternative that ultimately evolved into the TDI "Common Rail" system. In 2006, Richard Dorenkamp, head of Volkswagen's diesel engine development, gave a presentation in Detroit. He described the TDI system Volkswagen engineers developed and how it could be used in small cars and meet increasing US demands for fewer emissions.[44] Volkswagen's TDI Clean Diesel pollution

---

[43] http://www.autonews.com/article/20150927/COPY01/309279989/bosch-warned-vw-about-illegal-software-use-in-diesel-cars-report-says. Winterkorn was generally very concerned about the costs associated with developing eco-friendly automotive engines. As he said at the 2014 Paris auto show, "[c]limate protection is not available free of charge. Every gram of reduction in [tailpipe] C02 costs us 100 million euros. Every gram!" http://blog.caranddriver.com/vws-winterkorn-to-greens-so-get-off-our-backs-already/.

[44] http://www1.eere.energy.gov/vehiclesandfuels/pdfs/deer_2006/session7/2006_deer_dorenkamp.pdf.

control technology differed from the SCR technology used by other manufacturers to control NOx emissions. The greencarcongress.com article cited earlier describes it in detail. Instead of having a urea tank, the TDI Clean Diesel cars technology used a trap to collect NOx. While saving the space, weight and cost required by the urea tank in the SCRs, Volkswagen's TDI Clean Diesel technology--when it was operational--required additional use of fuel, thus degrading both gas mileage and performance. The trap was controlled by a computer module that could save fuel by allowing more pollutants to pass through the exhaust system.

50. In June of 2007, six months after Winterkorn took over as CEO of VWAG, Volkswagen issued a report entitled "Power Train and Fuel Strategy--The Path To The Future."[45] It stated:

> In the first stage on the path to this independence, it will be important to utilize existing fossil fuels as efficiently as technically possible. Volkswagen is putting its stamp on this phase with vehicles such as the BlueMotion models, a universally fuel-efficient fleet of TDI engines, highly efficient and unique TSI engines, successful natural gas vehicles (EcoFuel) and a lineup of models that still leaves room for automotive dreams. Very soon these fundamental technologies will be further refined. **New powertrains, including an engine concept developed for use in the USA, under the working title "BlueTDI", are already in the prototype stage. These engines will fulfill the toughest emissions laws in the world – even the so-called "Tier2 Bin5" in California, one of the most stringent emissions standards in the world.** (Emphases added).[46]

51. Volkswagen had planned to introduce the Jetta TDI Clean Diesel in the United States earlier than it eventually did. In November of 2007, it was reported as follows:

---

[45] It can be found at http://www.volkswagenag.com/content/vwcorp/info_center/en/themes/2007/06/powertrain_and_fuel_strategy.html.

[46] In 2008, five VWAG engineers published a two-part article in the May and June issues of *MTZ* magazine saying they had resolved the issue of how to best control emissions and could now meet California standards through the use in part of a new on-board diagnostics system. Similarly, Achim Freitag, a testing engineer in Volkswagen's diesel development department, touted the new engine in a speech given later that year. *See* http://www.pbs.org/wgbh/nova/next/tech/volkswagen-diesel-emissions/.

VW FOIA, EPA 06/20/2017 2017-FFP_030878

> A problem with the emissions system in Volkswagen's new Jetta TDI will delay the launch of the diesel sedan for about six months. The car is critical to VW's plans to get back on track in the United States.
>
> VW spokesman Keith Price confirmed that the delay will be announced this week at the Los Angeles auto show. Price would not give specifics about the technical problem, but he said it has been fixed.
>
> The technical changes engineers made to solve the problem mean the car must go through emissions testing and validation again, Price said.
>
> VW dealers have been without a new diesel car to sell since last spring. Production of the new model, which will be sold in all 50 states, was scheduled to start in January. The car will be built in Puebla, Mexico.
>
> U.S. sales originally were expected to begin in early spring, Price said. Now sales won't start until later in the summer."
>
> "Sure, they're disappointed," Price said of dealers who have learned of the delay.
>
> Price said there is a lot of pent-up demand from loyal VW diesel buyers for the next- generation Jetta, which has a new engine built in Germany and a new diesel fuel injection system.
>
> "They're disappointed, but they see the point that this car has to be perfect," Price said of the dealers, adding, "They recognize the importance of this not only for their stores, but for the VW brand."
>
> A fleet of about 40 Jetta TDIs is undergoing testing as part of the validation procedure.[47]

52. What apparently happened is that the TDI technology failed initially to withstand United States emissions testing. The decision was made to delay the launch of the vehicle and activate the algorithm that functioned as a defeat device in the software management system. This is consistent with the timing of the letter from Bosch described above that raised the illegality of such a tactic. It is also consistent with recent revelations that appeared in the October 4 issue of *Bild am Sonntag*:

---

[47] http://www.cleanmpg.com/forums/showthread.php?t=7254.

VW FOIA, EPA 06/20/2017 2017-FFP_030879

> An internal review at Volkswagen AG shows the decision to install software that reduces diesel emissions in testing was made just before serial production of the company's EA 189 engine [used in many of the Class Vehicles], German tabloid Bild am Sonntag said.
>
> Bild said the software was first installed in its diesel engines in 2008, shortly before the EA 189 was mass produced. The move was taken because there was no way at the time to reconcile meeting emission standards within the targeted cost of the engine, the tabloid said in an advance release of the article to be published Sunday. Otherwise the company would have had to abandon the introduction of the engine, development of which was begun in 2005, the newspaper said.[48]

53. The 2009 Model Year TDI Jetta was introduced and passed the Tier 2 Bin 5 emissions test with flying colors. A Reuters article describes its successful launch:

> Volkswagen had heavily marketed what it called "clean diesel" engines starting in 2008 with the 2009-model Jetta TDI. It appeared to have found a sweet spot between high-performance and fuel-efficiency with a zippy, fun-to-drive car that topped 40 miles per gallon in highway driving. Named "Green Car of the Year" at the Los Angeles auto show in 2008, the Jetta TDI was seen as a breakthrough in a country where diesel passenger cars occupy a tiny niche compared with Europe, where they are about half of the market.
>
> "It's not your grandfather's diesel," Krause said in a September 2008 presentation to U.S. regulators, according to a video of the remarks.
>
> [Norbert] Krause [head of VWoA's environmental office until 2009] and other VW officials promised a diesel that would meet pollution laws in all states, including California where diesel engines had long been associated with smog and cancer-causing soot.
>
> By that point, VW and other automakers had lobbied for almost a decade for regulators to give diesel another chance. In 2000, VW and other companies with an interest in promoting diesel, including Mazda, formed the Diesel Technology Forum to lobby for increased use in the United States as a way to reduce reliance on imported oil. In 2005, an energy bill signed by President George W. Bush offered tax credits for diesel buyers. That gave the first wave of diesel Jetta buyers an income tax credit of $1,300 each.

[48] http://www.marketwatch.com/story/vw-began-using-emissions-software-in-2008-report-2015-10-04.

> In 2009, after the new Jetta went on sale, VW dealers initially sold out, including in California where regulations had effectively shut the market to diesels earlier in the decade.[49]

54. As noted in the article, *Green Car Journal* gave it the 2009 Green Car of the Year award and gave the TDI Audi A3 the 2010 Green Car of the Year Award.[50] Those awards have been rescinded in light of the present scandal.[51] The TDI Clean Diesels were a resounding success and VWoA sold many units.[52] As recently as its 2014 sustainability report, VWAG crowed about how "[t]he Volkswagen Group has a long tradition of resolute commitment to environmental protection" and how it intended to "put our creative powers to good use for the benefit of the people and the environment."[53]

55. At conferences and in published papers, Volkswagen extolled the efficiency and low emissions of its Clean Diesel technology.[54] And commentators agreed. One stated that Volkswagen was "the only company to have mastered the new emissions regulations using a compact, inexpensive treatment system. It allowed them to roll out diesel engines in one small car after another at relatively low prices."[55] Volkswagen's competitors had long wondered how Volkswagen could produce a clean diesel engine at such an affordable price. As Robert Lutz,

[55] http://www.pbs.org/wgbh/nova/next/tech/volkswagen-diesel-emissions.

former vice chairman of General Motors Corporation, recounted: "I kept asking our engineers: 'What's wrong with you guys? VW seems able to do it.' I said, 'Are they magicians or something?' The engineers said they couldn't answer that question."[56] Now, they have their answer. Volkswagen cheated.

56. The competitive advantages of cheating on emissions have now become clear. "Manipulating emissions results allowed Volkswagen to keep down engine costs in a 'clean diesel' strategy that was popular in Europe and at the heart of a drive to improve U.S. results."[57] As an article in the *New York Times* put it, "[d]isabling the emissions controls brought major advantages, including much better mileage--a big selling point in Volkswagen's push to dominate in America."[58] These sales were part of the reason VWAG was able to surpass Toyota as the world's biggest automaker in 2015, as noted above. And they were sales built upon lies.

57. This systemic attitude of winning at all costs in spite of noncompliance with national environmental regulations is part of the corporate culture of Volkswagen, as explained at length in a September 24, 2015 *New York Times* article:[59]

> There is a long tradition of scandal and skulduggery in the auto industry, but few schemes appear as premeditated as Volkswagen's brazen move to use sophisticated software to circumvent United States emissions standards.
>
> That such a thing could happen at Volkswagen, Germany's largest company and the world's largest automaker by sales — 202.5 billion euros last year — has mystified consumers and regulators around the world. But given Volkswagen's history, culture and

[56] http://www.freep.com/story/money/cars/2015/09/26/vw-cheat-emissions-diesel- engine-fallout/72612616/.

[59] http://www.nytimes.com/2015/09/25/business/international/problems-at-volkswagen-start-in-the-boardroom.html?_r=1.

corporate structure, the real mystery may be why something like this didn't happen sooner.

"The governance of Volkswagen was a breeding ground for scandal," said Charles M. Elson, professor of finance and director of the John L. Weinberg Center for Corporate Governance at the University of Delaware. "It was an accident waiting to happen." The company, founded by the Nazis before World War II, is governed through an unusual hybrid of family control, government ownership and labor influence. Even by German standards, "Volkswagen stands apart," said Markus Roth, a professor at Philipps-University Marburg and an expert in European corporate governance. "It's been a soap opera ever since it started."

****

I spoke this week to a longtime former senior Volkswagen executive, who agreed that a scandal, especially one involving emissions, was all but inevitable at Volkswagen. He cited the company's isolation, its clannish board and a deep-rooted hostility to environmental regulations among its engineers.

The former executive, who spoke on the condition of anonymity because he now works at a competing global automaker, said that Wolfsburg, where Volkswagen is based in Lower Saxony and the city with the highest per capita income in Germany, is even more remote and isolated than Detroit was in its heyday. "The entire economy is automotive," he said. "People have a completely uncritical view of cars and their impact on the environment because they all make a living from the industry."

****

The Volkswagen board has been especially slow to move on environmental issues, investing less in electric and hybrid engine technology than industry leaders.

"There's an attitude among the German public that it's very unfair for the U.S. to target the auto industry over emissions," Professor Roth said. "If you have electric cars and a coal-fired plant producing the electricity, you gain nothing."

The former Volkswagen executive said Volkswagen's engineer-driven culture takes the notion even further. He said the engineers felt that the politicians were guilty of rank hypocrisy, especially in the United States, also grumbling that electric cars make no sense as long as power plants are burning fossil fuels.

"There's an attitude of moral superiority there," he said. "The engineers think they know best."

That Volkswagen is nonetheless obliged to obey applicable

> environmental laws, he said, is a notion likely to fall on deaf ears in Wolfsburg, especially compared to demands to be No. 1 in sales. (The motive for the software evasion is widely believed to have been to increase sales of diesel-powered cars in the United States.)

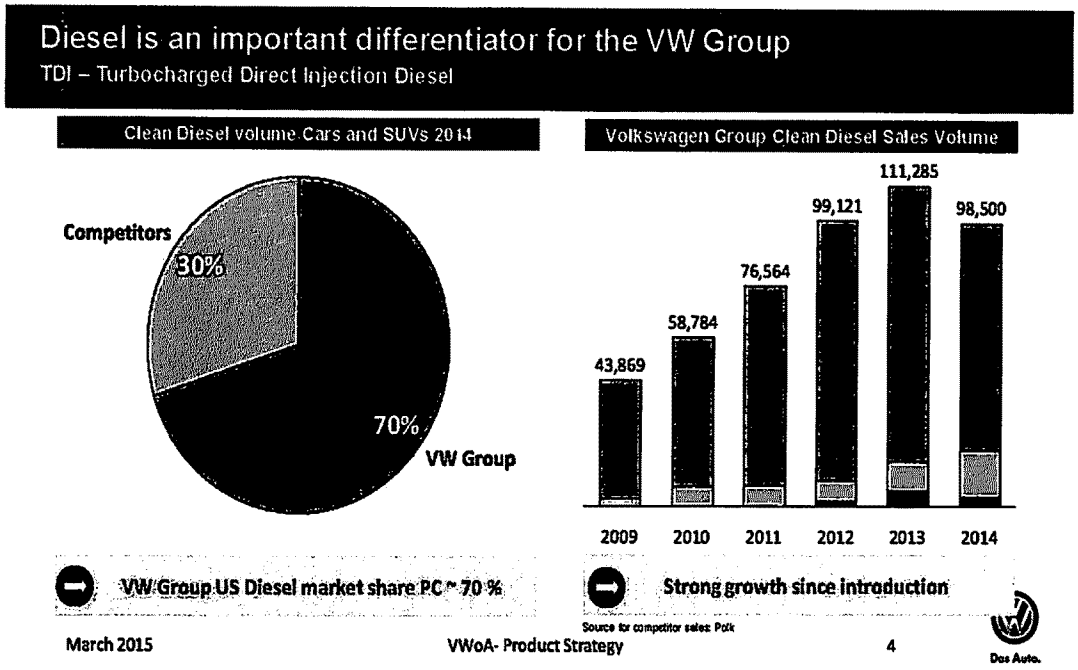
Thus, executives and engineers at Volkswagen were clearly unhappy with United States automotive emissions standards and were all too willing to sacrifice those standards (and their obligations under United States antitrust laws) in order to ensure that their company became the number one automaker in the world. The current scandal involving Volkswagen Clean Diesel TDI vehicles is a direct result of that arrogant intention to flout United States environmental laws. It is also a direct result of what has been described by one German executive as Volkswagen's "uniquely awful" corporate governance.[60]

D. The Clean Diesel Car Market.

58. Volkswagen's illegal conduct in this country occurred in the Clean Diesel passenger car market in the United States (the "Clean Diesel Car Market"), which can be viewed as a market of its own or as a submarket of passenger cars sold in this country. This fact was confirmed in a presentation by Douglas Skorupski ("Skorupski"), Manager of Power Train Strategy for VWoA, given to the Diesel Technology Forum ("DTF") in March of 2015:

[60] http://www.cnbc.com/2015/10/04/volkswagens-uniquely-awful-governance-at-fault-in-emissions-scandal.html.

VW FOIA, EPA 06/20/2017 2017-FFP_030884



59. Thus, VWoA clearly views clean diesel cars as a distinct market and Volkswagen's TDI technology as a factor that allowed it to obtain a monopoly share of that market.[61] It distinguished Clean Diesel cars from gasoline/electric hybrid cars based on superior performance:

[61] The presentation can be found at http://cleandieseldelivers.com/media/Douglas-Skorupski-VWoA_DTF_March2015.pdf. Bosch has similarly identified a distinct Clean Diesel car category: http://www.low-carbonfuels.com/pdfs/acte2011presentations/Day1/Breakout1/LightDuty/ACT2011-Breakout1-FreitagAlexPresentation150.pdf. And the EPA has noted that "Clean diesel" refers to a three-part emissions control system that combines cleaner diesel fuel, advanced engines and effective emissions control technology.

"[o]ne way Volkswagen aimed to achieve its lofty goal was by betting on diesel-powered cars — instead of hybrid-electric vehicles like the Toyota Prius--promising high mileage and low emissions without sacrificing performance."[62] Similarly, a survey conducted by Strategic Vision for Volkswagen found that customers of diesel and hybrid vehicles are very different and there is "very little crossover from one to the other." [63] The same article noted that Clean Diesel TDI and hybrid buyers differed demographically; the latter were "were just 51 percent male, 78 percent of them were married, 89 percent had no kids in the household, and their average age was 61", while the former "included far more men than women[,] [f]ewer of them were married, but more of them had children in the house, and they were fully 17 years younger, with an average age of 44." Likewise, a Volkswagen Clean Diesel IQ survey found that diesel car customers are highly aware of the benefits of clean diesel technology in contrast to hybrid and gasoline car customers. Furthermore, 94% of diesel customers will purchase clean diesel cars again while only 26% of hybrid and gasoline car customers will consider clean diesel cars for their next purchase.[64] All of this indicates little cross-elasticity of demand between hybrid vehicles and Clean Diesel vehicles.

60. Indeed, the major European competitors of Volkswagen in the Clean Diesel Car Market belong, along with Volkswagen, to an organization that is devoted to extolling the benefits of Clean Diesel cars.[65]

61. BloombergBusiness noted that consumers are willing to pay a substantial premium

---

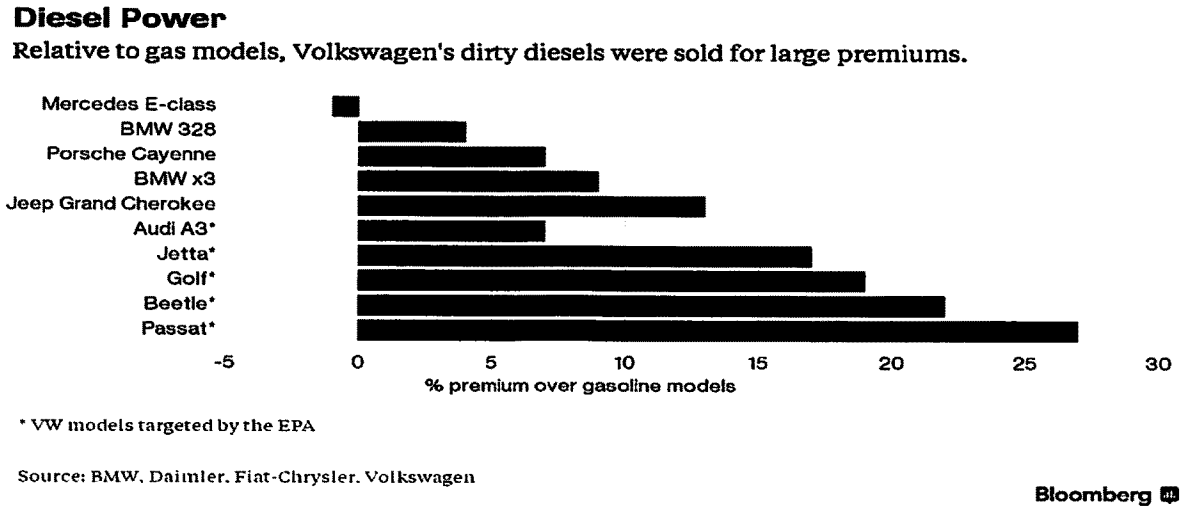
[62] http://mobile.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?referer.

[63] http://www.greencarreports.com/news/1080201_vw-diesel-buyers-hybrid-buyers-both-want-fuel-economy-but-beyond-that.

[64] http://www.autosphere.ca/fleetdigest/2013/04/01/volkswagen-surveys-diesel-drivers/. *See also* http://www.cmu.edu/gdi/docs/diesel-and.pdf (noting many key differences between diesel and hybrid car customers).

[65] http://www.clearlybetterdiesel.org/index.html#cleanDiesel.

for Clean Diesel vehicles over those of its competitors.[66]



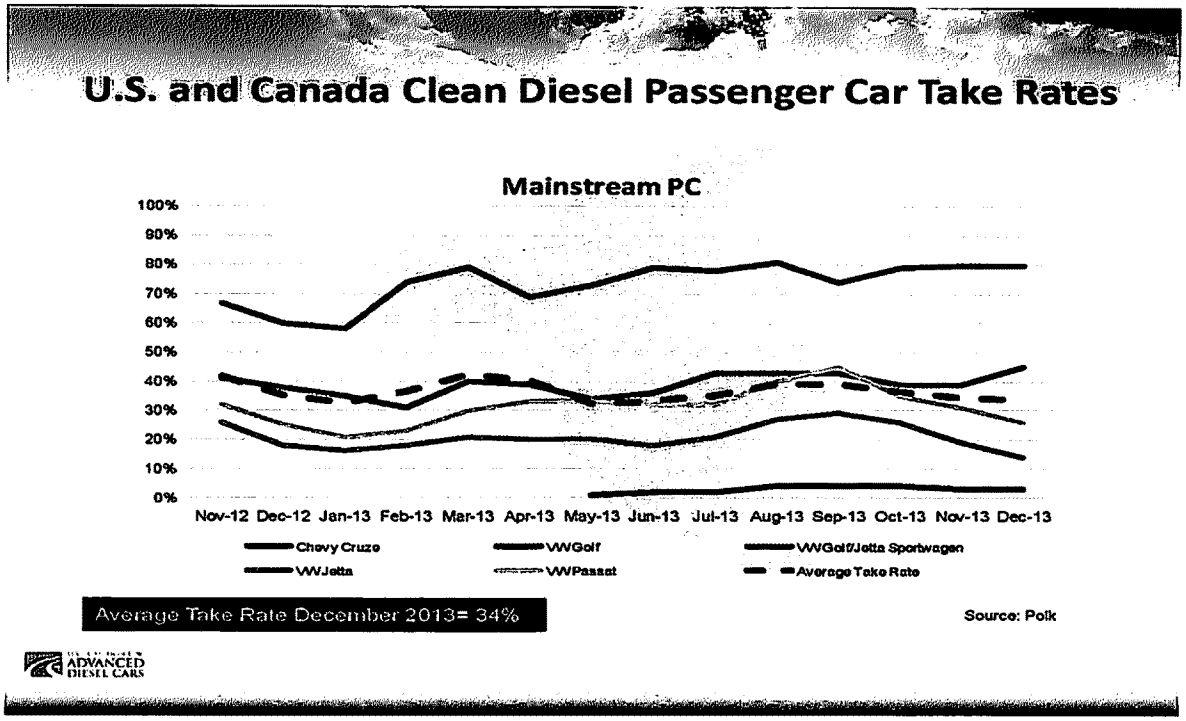
62. As the BloombergBusiness article goes on to explain:

> The math on diesel has never been tidy. The additional mileage is great, but unless one drives a lot, it doesn't really cover the added expense for the engine and for the fuel itself. At current gas prices, the diesel premium on the Passat—some $5,755—would buy enough gas to drive the gas-burning model for about 88,000 miles. **For the majority of diesel drivers, the factor that probably swung the decision was the apparent environmental benefit. The green aspect was the fulcrum.** (Emphases added).

Thus, Volkswagen's false claims about its TDI technology were a driving factor in the premium prices it charged consumers for such technology. As noted above, VWAG has taken full responsibility for the "economic damage" caused by its illegal conduct.

[66] http://www.bloomberg.com/news/articles/2015-09-23/volkswagen-s-other-diesel-ruse-premium-pricing.

63. A chart contained in a presentation made by CMW Research at the March 2015 DTF conference[67] underscores the differences in take rates between Volkswagen Clean Diesel cars and those made by its competitors:



64. The price premium for Clean Diesel vehicles is also reflected in this chart showing the price differentials between gasoline-powered models and Clean Diesel models of Volkswagen's own cars:

Clean Diesel Price Premium				
Mode	**Base**	**Mid-Level**	**Top-Level**	**Average**
VW Jetta	$2,860.00	$1,570.00	$1,030.00	$1,820.00
VW SportWagen	$5,570.00	$1,680.00	$0.00	$2,416.67
VW Golf	$2,400.00	$1,000.00	$1,000.00	$1,466.67
VW Golf	$2,950.00	$1,000.00	$1,000.00	$1,650.00
VW Beetle	$4,635.00	$4,920.00	$0.00	$3,185.00
VW Beetle	$4,080.00	$530.00	$700.00	$1,770.00
VW Passat	$5,755.00	$2,845.00	$2,135.00	$3,578.33

[67] http://cleandieseldelivers.com/media/Take-Rate-Slides-March-2014.pdf.

Audi A3	$2,300.00	$2,300.00	$2,300.00	$2,300.00
Average	$3,818.75	$1,980.63	$1,020.63	$2,273.33

E. Volkswagen's False Advertising.

65. Volkswagen, as part of its plan to increases sales and market share in the United States, increased its emphasis on diesel-powered cars and began marketing these cars heavily to the United States public beginning in 2008. It emphasized the TDI Clean Diesel cars' environment-friendly engine, excellent gas mileage, and high-quality performance. In one advertisement (which, as of this writing, was available on Audi's website after the scandal surfaced and is attached as Exhibit 5 to the Complaint),[68] for example, Volkswagen claimed:

> Getting more from less. Audi pioneered TDI® clean diesel engines to deliver more torque, lower fuel consumption and reduce CO2 emissions, compared to equivalent gasoline engines. The result of this revolutionary engineering delivers remarkable performance, while achieving increased fuel economy.

66. Another advertisement by VWAG for Clean Diesel cars asserts that

> This ain't your daddy's diesel. Stinky, smoky, and sluggish. These old diesel realities no longer apply. Enter TDI Clean diesel. Ultra-low-sulfur fuel, direct injection technology, and extreme efficiency. We've ushered in a new era of diesel.[69]

This internet advertisement is attached as Exhibit 6 to the Complaint.

67. Volkswagen's advertising relentlessly touted the supposed fuel efficiency and environmental features of its Clean Diesel TDI vehicles. In 2009, Volkswagen introduced its "Meet the Volkswagens" campaign, which promoted "fuel efficiency, green credentials, cost of ownership and safety," and compared Volkswagen's diesel passenger cars to its competitors. According to Tim Ellis, Volkswagen's marketing chief, the goal of this advertising campaign was to "grow the brand in the U.S."[70] This campaign, among other things, included social media links

68 https://web.archive.org/web/20150928180733/http://www.audiusa.com/technology/efficiency/tdi

69 https://web.archive.org/web/20150330110301/http://www.vw.com/features/clean-diesel/.

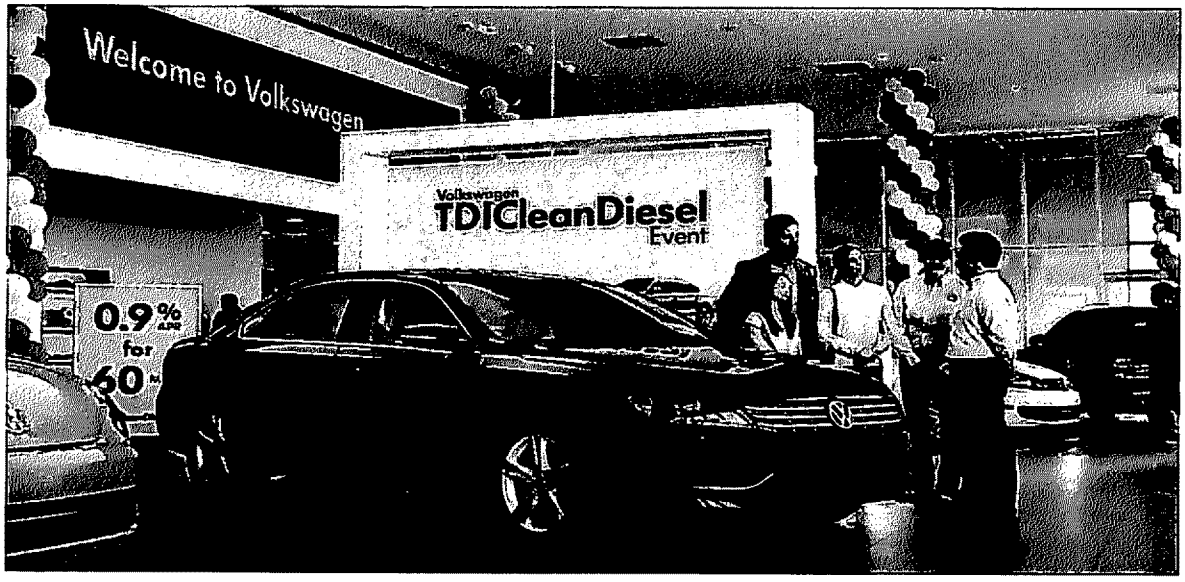
70 http://abcnews.go.com/Business/story?id=7493781.

VW FOIA, EPA 06/20/2017 2017-FFP_030889

to a blog (tdi.vw.com/tdi), which focused on Volkswagen's TDI clean diesel model.

68. Between 2011 and 2013, Volkswagen spent more than $2.9 billion annually on advertising world-wide; many of those advertising dollars were directed at the United States public. Volkswagen issued hugely popular videos featuring the Golden Sisters, who purported to debunk the myths about polluting diesel cars.[71] Other videos that were highly successful included a "Truth or Dare" effort started in 2009 that was about "debunking the myths on clean diesel and fueling the passion of existing diesel owners"; a 2009 Audi video that proclaimed "diesel, no longer a dirty word"; and a Passat "being a Mom" video, all of which can be viewed on the *New York* magazine website.[72] Another well-known video showed German engineers of TDI Clean Diesel vehicles earning their "angel's wings."[73]

69. Volkswagen also used point-of-purchase displays at the showrooms of Volkswagen Authorized Dealers such as the one depicted below:



[71] http://blog.caranddriver.com/vws-hilarious-new-tdi-diesel-ads-return-excellent-viral-mileage/.

[72] http://nymag.com/daily/intelligencer/2015/09/vws-clean-diesel-ads-now-make-us-feel-dirty.html.

[73] https://www.youtube.com/watch?v=fwkPEza9FPw.

70. As VWoA's Mark Barnes put it, the TDI Clean Diesel cars were "fantastic power train[s]" with "very good fuel economy." Yet "[i]t's also good for the environment because it puts out 25% less greenhouse gas emission than what a gasoline engine would. And thanks to the uniqueness of the TDI motor, it cuts out the particulate emissions by 90% and the emissions of nitrous oxide are cut by 95%. So a very very clean running engine. Clean enough to be certified in all 50 states."[74]

71. In television and print advertisements and in social media, Volkswagen strived to present its Clean Diesel TDIs as the environmentally-friendly, fuel-efficient, fun-to-drive and reasonably priced passenger car. As noted above, Volkswagen's sham advertising campaign was a success. Unfortunately, all of these accolades were based on a sham perpetrated by Volkswagen for seven years.

F. Volkswagen's Defeat Device.

72. As noted above, Volkswagen's defeat device is described as a "sophisticated software algorithm" that detects when the car is undergoing emissions testing. The algorithm used information about how the car was being steered, how long the engine ran and atmospheric pressure to "precisely track" the conditions that corresponded to a federal emissions test, according to the EPA. During emissions testing, the software "turns on" the car's full emissions control system in order to pass the test. Under normal driving situations, however, these emissions control systems are ***turned off***, allowing the cars to spew as much as 40 times the allowable amount of NOx into the air. As an EPA spokesman noted, the defeat device was "particularly difficult for us to detect."[75] This ruse went undetected for seven years, although as noted above, Bosch and one

[74] http://www.businessinsider.com/volkswagen-preps-for-a-diesel-revolution-2009-10.

[75] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagons-deception-the-recall-that-never-fixed-any-cars/. A useful timeline of how the scandal came to light is provided on the website of Cars.com: https://www.cars.com/articles/vw-diesel-crisis-timeline-of-events-1420681251993/.

of VWAG's own engineers complained about it to the company.

73. One technology blog has described Volkswagen's defeat device as follows:

> The method by which Volkswagen diesel cars were able to thwart emissions tests and spew up to 40X the nitrogen oxide levels set by the Environmental Protection Agency was relatively simple. It was more likely no more than a single line of code used to detect when an emissions test was being performed and place the emissions system in an alternate mode — something as simple as a software "on/off" switch. Volkswagen AG CEO Martin Winterkorn, who stepping down as the result of his company's scandal, has said he had no knowledge of the emissions cheat, but software dev/test audit trails are almost certain to pinpoint who embedded the code and who authorized it. You can actually see who asked the developer to write that code," said Nikhil Kaul, a product manager at test/dev software maker SmartBear Software. "Then if you go upstream you can see who that person's boss was...and see if testing happened...and, if testing didn't happen. So you can go from the bottom up to nail everyone."[76]

74. As also noted above, 482,000 vehicles were described as affected, with over 50,000 in the state of California.[77]

75. In 2013 and again in 2014, the International Council for Clean Transportation ("ICCT") published studies showing serious discrepancies between laboratory and in-use emissions of certain cars, including VW TDI Diesel cars used in Europe.[78] A decision was made to test American Clean Diesel cars to show that they were success stories; the opposite turned out to be the case. The ICCT, in conjunction with researchers at and West Virginia University's Center for Alternative Fuels, Engines and Emissions ("CAFEE") conducted on-road emissions tests on three vehicles sold in the United States: a 2013 TDI Passat, a 2012 TDI Jetta, and a BMW X5

---

[76] http://developers.slashdot.org/story/15/09/24/1423225/how-did-volkswagen-cheat-emissions-tests-and-who-authorized-it.

[77] http://www.latimes.com/business/autos/la-fi-hy-california-dmv-vw-diesel-20150921-story.html. This number excludes unregistered vehicles.

[78] http://theicct.org/sites/default/files/publications/ICCT_LabToRoad_20130527.pdf; http://www.theicct.org/sites/default/files/publications/ICCT_LaboratoryToRoad_2014_Report_English.pdf)

SUV. These researchers found that for the Passat and Jetta, emissions were far higher than the emissions generated in the laboratory by CARB. The Jetta exceeded United States NOx emissions standard by 15 to 35 times, and the Passat by five to 20 times. In laboratory testing by CARB, in contrast, these same vehicles complied with United States NOx emissions standards. The CAFEE report is attached as Exhibit 7 to the Complaint. ICCT brought the information to the attention of CARB and the EPA, who commenced their own investigations and contacted Volkswagen. Volkswagen chalked the discrepancies up to "various technical issues and unexpected in-use conditions", but agreed in December of 2014 to recall approximately 500,000 vehicles in order to apply a "software patch."[79]

76. After the remediation, CARB in May of 2015 tested a 2012 TDI Passat on the road and in the laboratory. It found some improvement in in-use NOx emissions, but not enough. An article in the *Philly Voice* describes what happened next.

> On July 8, CARB shared its results with VW, but there was no change in Volkswagen's position. Some officials privately questioned whether Volkswagen was deliberately violating the federal Clean Air Act by installing defeat devices -- software programmed to switch engines to a cleaner mode during official emissions testing, according to a person involved in the process.
>
> During normal driving, the software then shuts off, enabling cars to emit as much as 40 times the legal limit of pollutants.
>
> In early August, Oliver Schmidt, who followed [Norbert] Krause and preceded [Stuart] Johnson in VW's U.S. engineering and environmental office, attended a conference in Traverse City, Michigan and told regulators Volkswagen stood by its conclusions that the problem was technical, people involved said.[80]

77. Then, on August 21, there was a complete reversal. The *Philly Voice* article goes on to describe what happened:

> After more than a year of stonewalling investigators, Volkswagen stunned two senior officials with the U.S. Environmental Protective Agency and California's environmental watchdog by admitting the automaker hacked its own cars to deceive U.S.

[79] http://www.cnbc.com/2015/09/24/.

[80] http://www.phillyvoice.com/year-stonewalling-volkswagen-stunned-regulators/.

> regulators about how much their diesel engines pollute.
>
> That disclosure on Aug. 21, confirmed by two people with knowledge of the exchange, shows Volkswagen buckled to pressure from environmental regulators almost a month earlier than the scandal was made public. The admission to regulators came after a year during which VW officials insisted to regulators that tests on its diesel cars showing a spike in pollution levels on the road were in error.
>
> ****
>
> At first, regulators were surprised that Volkswagen would make its confession at the conference, held in Pacific Grove, California. Minutes before Christopher Grundler, director of the EPA's transportation and air quality office, was to deliver a 9 a.m. speech to the conference, a Volkswagen representative told him about the deception. At the same meeting, representatives of the California Air Resources Board, a state agency that had been pushing VW hard, were also given a verbal notice of the deception, people with knowledge of the events said.
>
> Volkswagen declined to comment on the sequence of events described to Reuters. It isn't clear which VW representative delivered the news of the deception to Grundler and the CARB. Stuart Johnson, head of VW's engineering and environmental office in the United States, was registered to attend the Aug. 21 conference, which was organized by the University of California, Davis. Johnson, who still works for VW in Auburn Hills, Michigan, did not respond immediately to a request for comment.

78. Volkswagen was faced with the threat that the EPA it would not certify any of its 2016 models for sale in the United States until the questions surrounding the emissions discrepancies were answered. Volkswagen admitted that it relied upon a "second calibration" in the vehicles that was intended to run only during certification testing. This second calibration was triggered when a highly sophisticated software algorithm determined – after measuring factors like the position of the steering wheel, the vehicle's speed, pedal movement, and even barometric pressure – that the car was being tested. Then it would configure the engine to reduce emissions of NOx. As David Clegern of CARB explained, "[w]e met with VW on several occasions and they continued to dispute our data, so we'd return to the lab. Over time, VW had no other explanations left, and it was our lab staff who actually got VW to admit that there was, in fact, a defeat device."[81]

[81] http://www.foxnews.com/leisure/2015/09/22/for-7-years-vw-software-thwarted-pollution-regulations/.

As another CARB spokesperson told the *Washington Post*, "[t]hey basically ran out of excuses."[82]

79. The scandal surfaced on September 18, 2015, when CARB and the EPA announced that VWAG, Audi and VWoA had illegally installed emissions testing "defeat devices" in the aforementioned vehicles. *See* Appendices 1 and 2. The EPA found violations of 42 U.S.C. §§7522(a), 7522(a)(1) and 7522(a)(3)(B), as well as 40 C.F.R. §§86.1854-12(a)(3)(ii) and 86.1854-12(a). The EPA identified the following affected vehicles:

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2013	DVWXV02.0U4S	VW Passat
2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGAV02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

80. As noted above, Horn of VWoA admitted that Volkswagen was dishonest with both customers and regulators and Huber of VWAG called the matter a "moral and political disaster."

[82] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagonsdeception-the-recall-that-never-fixed-any-cars/.

81. Volkswagen has ordered its dealers to cease selling the Class Vehicles[83] and has set aside a minimum of 6.5 billion Euros ($7.2 billion) to deal with the fallout from this catastrophe, which it now concedes involved 11 million vehicles worldwide. An internal memorandum issued on September 22 details this:

Wolfsburg, 22 September 2015

Volkswagen AG has issued the following information:

Volkswagen is working at full speed to clarify irregularities concerning a particular software used in diesel engines. New vehicles from the Volkswagen Group with EU 6 diesel engines currently available in the European Union comply with legal requirements and environmental standards. The software in question does not affect handling, consumption or emissions. This gives clarity to customers and dealers.

Further internal investigations conducted to date have established that the relevant engine management software is also installed in other Volkswagen Group vehicles with diesel engines. For the majority of these engines the software does not have any effect.

Discrepancies relate to vehicles with Type EA 189 engines, involving some eleven million vehicles worldwide. A noticeable deviation between bench test results and actual road use was established solely for this type of engine. Volkswagen is working intensely to eliminate these deviations through technical measures. The company is therefore in contact with the relevant authorities and the German Federal Motor Transport Authority (KBA – Kraftfahrtbundesamt).

To cover the necessary service measures and other efforts to win back the trust of our customers, Volkswagen plans to set aside a provision of some 6.5 billion EUR recognized in the profit and loss statement in the third quarter of the current fiscal year. **Due to the ongoing investigations the amounts estimated may be subject to revaluation.**
Earnings targets for the Group for 2015 will be adjusted accordingly.

Volkswagen does not tolerate any kind of violation of laws whatsoever. It is and remains the top priority of the Board of Management to win back lost trust and to avert damage to our customers. The Group will inform the public on the further progress of the investigations constantly and transparently.

82. Volkswagen has indicated it will initiate a recall and remediation of the Class Vehicles, but there is no "fix" that can be achieved that would not result in lesser mileage per gallon or degraded performance, two of the key attributes on which TDI Clean Diesel cars were sold.

[83] *See* http://pics3.tdiclub.com/data/3209/stop-sale-note3.pdf.

> Experts Reuters spoke to indicate that two potential fixes could be needed for the two types of emissions control systems featured on 482,000 cars in the U.S., complicating the recall and refit process. Some experts opined that just a software solution could make the affected vehicles compliant with EPA regulations, reducing the performance characteristics of the engines in the process, while others suspect that a hardware solution may be needed for older vehicles without the urea injection system.
>
> A couple of experts warned that the potential solution could involve significantly increased consumption of urea, necessitating fill-ups at more frequent intervals such as every 5,000 miles, in addition to reducing the performance of the engines.[84]

The same point was made by the West Virginia AG in a complaint filed on October 2 against Volkswagen for civil penalties. It is attached as Exhibit 8. In that complaint, the West Virginia AG notes that "Volkswagen will not be able to comply with the EPA [recall] order to make the Affected Vehicles comply with emissions standards without substantially degrading their performance and fuel efficiency to a level below that advertised by Volkswagen, and below that experienced by consumers prior to, or when they purchased their vehicles." Thus, there is no valid "cure" for Volkswagen's conduct.

83. Nor can any recall cure the tarnished reputation of Volkswagen's TDI Clean Diesel vehicles and the substantial diminution of their resale value. The Kelley Bluebook has reported that prices for used Volkswagen diesel cars have declined by 21% in the last few weeks, reflecting the aftermath of Dieselgate.[85] Thus, customers not only overpaid when they bought the Class Vehicles, but have suffered a significant diminution of the resale value of their vehicles. Indeed, a survey of 460 fleet buyers in the United Kingdom revealed that 49% of them were reconsidering their contracts with Volkswagen in the aftermath of the Dieselgate revelations.[86]

84. As noted above, the Executive Committee of the Board that accepted his retirement

---

[84] http://autoweek.com/article/car-news/vw-diesel-emissions-fix-may-require-2-solutions.

[85] http://www.latimes.com/business/autos/la-fi-hy-auto-sales-20151001-story.html.

[86] http://www.dailymail.co.uk/money/news/article-3258793/VW-scandal-deepens-revealed-half-company-car-buyers-ditch-embattled-firm.html.

said that it "recognizes the economic damage caused" as well as the "loss of trust" among customers. No recall and supposed remediation can correct that.

85. A survey of vehicle owners conducted by AutoPacific[87] further reveals consumer disgust with Volkswagen. Only one in four have a positive opinion of Volkswagen, compared to three in four before the scandal. The corresponding figures for Audi were 29%, as opposed to 69%. Sixty-four percent of the survey respondents say they do not trust Volkswagen.

86. But the illegal conduct by Volkswagen has not just resulted in economic damage and loss of consumer trust. It has caused **the death of dozens of people in the United States over the last seven years and degraded the health of many more**. On October 3, Associated Press ("AP") laid out the facts.[88] AP calculated exhaust pollution year by year, starting with the ten to 40 times emissions level estimate by the EPA and then factored in mileage and car number totals from the Kelley Blue Book. It came up with a range of NOx pollution caused by the Class Vehicles and then took it to scientists who modeled mortality rates, which were confirmed by a dozen experts in emissions, risk and public health, none of whom were environmental advocates or representatives of automobile manufacturers. The results are depicted in the chart that follows.

[87] http://www.autopacific.com/news-app/story.248/title.volkswagen-s-reputation-takes-big-hit-with-vehicle-owners-autopacific-predicts-tough-road-ahead.

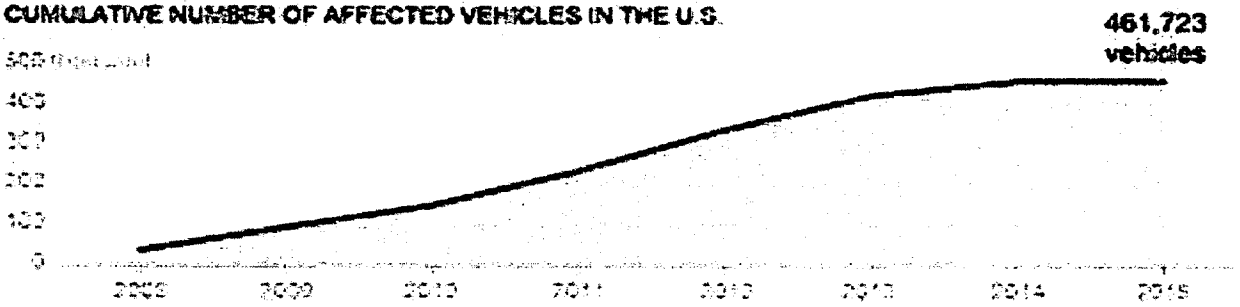
[88] http://bigstory.ap.org/article/a6925f0af82e44aaa1a1ed4b55d030f6/ap-analysis-dozens-deaths-likely-vw-pollution-dodge.

VW FOIA, EPA 06/20/2017 2017-FFP_030898

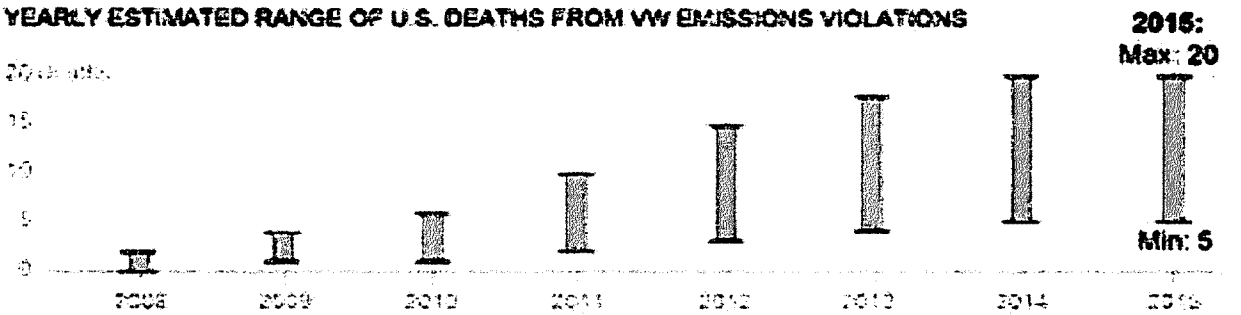
Calculating human toll of VW emissions problems

U.S. pollution resulting from Volkswagen's dodging of emissions tests is enough to have caused dozens of deaths since 2008. An AP analysis calculated upper and lower limits of pollution using the number of affected vehicles each year and average mileage. Scientists used that data in epidemiological computer models to estimate a range of deaths.

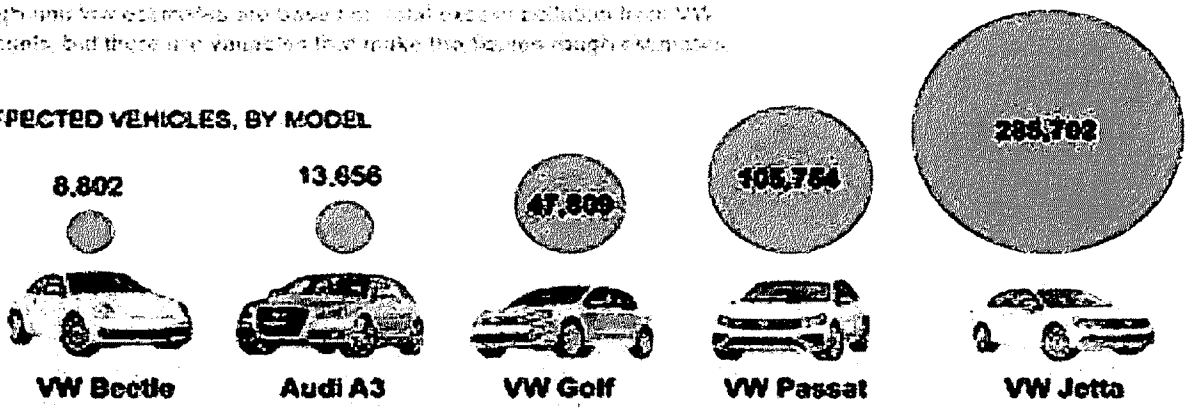
CUMULATIVE NUMBER OF AFFECTED VEHICLES IN THE U.S.



YEARLY ESTIMATED RANGE OF U.S. DEATHS FROM VW EMISSIONS VIOLATIONS



AFFECTED VEHICLES, BY MODEL



87. As the AP article notes, the Class Vehicles spewed enough NOx over the course of seven years to significantly degrade the environment in urban areas. Eric Schneiderman, the New York AG has said that "[t]he stakes could not be higher for the health and safety of our communities who, if Volkswagen's own admissions are true, have for years been breathing air containing excess pollution from their vehicles."[89] Harris County Texas (where the City of Houston is located) has already sued Volkswagen for $100 million in harm to air quality.[90]

88. As noted in the *Minneapolis Star-Tribune* in a follow-up piece on the AP story:

> Computer software allowed VW diesel cars to spew between 10 to 40 times more nitrogen oxides (NOx) than allowed by regulation, making this "clearly a concern for air quality and public health," said Janet McCabe, acting air quality chief for the U.S. Environmental Protection Agency.
>
> Nitrogen oxides mostly form smog — that murky, dirty air that makes it hard to see and for some people to breathe — but also amplify a deadlier, larger problem: tiny particles of soot. Numerous medical studies show those tiny particles cause about 50,000 deaths a year in the United States, mostly from heart problems.
>
> Nitrogen oxides can travel hundreds of miles, so pollution spewed in Pittsburgh can be felt on the East Coast, [Carnegie Mellon environmental engineer Professor Peter] Adams said.
>
> Experts calculate how much pollution costs society by looking at the value of lost lives. In this case, Adams and other said the lost lives — valued at $8.6 million apiece — overwhelm other costs such as lost work days or hospital costs. The overall annual cost of the extra pollutants from the VW diesels ranged from $40 million to $170 million, environmental engineering professors calculated. "Even the small increase in NOx from VW diesel emissions is likely to have worsened pollution along the roadways where they have traveled, and affected the lives of hundreds of thousands of people," said Dan Greenbaum, president of the Health Effects Institute in Boston.

---

[89] http://mobile.nytimes.com/2015/10/03/business/us-states-jumping-into-investigation-of-vw-emissions-deception.html?_r=0&referer=https://www.google.com/.

[90] http://www.wsj.com/articles/u-s-justice-department-conducts-criminal-probe-of-volkswagen-sources-say-1442869059.

> "To say millions of people of people are breathing poor air as the result of that is not off the mark," said Greenbaum, who runs the institute that is funded by both the EPA and the auto industry to serve as an independent arbiter of the science.[91]

89. The revelation of the scandal has led to numerous consequences in the United States. The DOJ is conducting a criminal probe of Volkswagen.[92] AGs in 30 states have initiated their own investigation.[93] A Texas judge has issued a temporary restraining order preventing the Class Vehicles from being sold within the state. *See* Exhibit 9 to the Complaint. The Subcommittee of Oversight & Investigations of the Energy & Commerce Committee of the United States House of Representatives has initiated an investigation and sent letters to Volkswagen and the EPA.[94] Horn has said he will testify before the committee on October 8.[95] Fred Upton, the chairman of the full committee, has stated that "[t]he very notion of a carmaker intentionally violating our environmental laws is beyond belief....[R]eports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated. Attempting to deceive regulators and customers is a double whammy of betrayal."[96] Nearly 200 private lawsuits have been filed, many of them class actions. Among those class actions, most involve class claims for individual statewide classes, as opposed to federal claims for nationwide classes.

90. Outside the United States, several countries are investigating Volkswagen's

VW FOIA, EPA 06/20/2017 2017-FFP_030901

conduct.[97] Switzerland has banned the sale within its borders of certain Volkswagen TDI Diesel cars sold in Europe.[98] Prosecutors in Paris have launched an investigation for suspected "aggravated" deception of affected vehicles sold in France; French Environment Minister Segolene Royal called Volkswagen's conduct "a form of theft from the taxpayer and the state."[99] The Italian antitrust authority has also commenced an investigation, saying "Volkswagen's claims about emissions and certifications in advertising campaigns and information brochures distributed by dealers might have induced consumers to make an error in their choice."[100]

91. As noted above, Volkswagen has set aside $7.2 billion to deal with the costs of the scandal. That will not be nearly enough. James E. Tierney, a former AG in Maine, has been quoted as saying that the costs to Volkswagen might be "'incalculable,' with each false advertisement to consumers, for example, carrying a potential penalty. 'This product was designed to operate illegally, and that is very serious.'"[101]

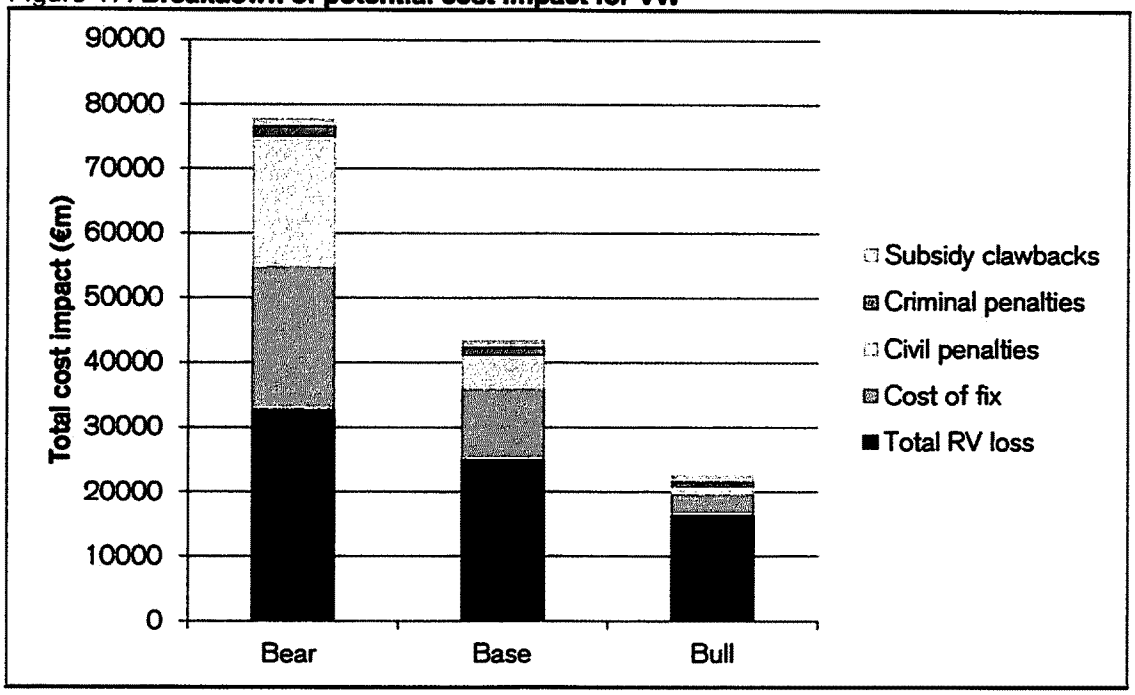
VW FOIA, EPA 06/20/2017 2017-FFP_030902

92. Nonetheless, some attempts at calculation have been made. On October 2, Credit Suisse disseminated an analysis showing Volkswagen's anticipated costs in a "bull" scenario (where events turned out favorably to it), a "base" scenario, and a "bear" scenario (where events turned out unfavorably).[102] The "bull" scenario was $25.6 billion in costs, while the "bear" scenario was $87.1 billion. The analysis is summarized in the following chart:

Figure 17: **Breakdown of potential cost impact for VW**



Source: Credit Suisse estimates

As can be seen, costs associated with criminal and civil penalties make up a significant portion of the differing amounts. Credit Suisse also predicts that Volkswagen's stock may decline another 20%.

VI. CLASS ACTION ALLEGATIONS.

93. Plaintiffs bring this action both on behalf of themselves, and as a class action pursuant to Federal Rules of Civil Procedure 23(a) and (b)(3), on behalf of the following class (the

[102] http://www.businessinsider.com/credit-suisse-volkswagen-shares-could-fall-another-20-2015-10?r=UK&IR=T.

VW FOIA, EPA 06/20/2017 2017-FFP_030903

"Class").

> All persons and entities who purchased or leased a Class Vehicle from a Volkswagen Authorized Dealer in the United States. Excluded from the Class are Defendants, their parent companies, subsidiaries and affiliates, any co-conspirators, all governmental entities, and any judges or justices assigned to hear any aspect of this action.

The Class includes subclasses of persons located in California and Virginia. These will be referred to herein as the "California Subclass" and the "Virginia Subclass."

94. Plaintiffs do not know the exact number of Class and Subclass members but believe based on published reports that there are more than 482,000 Class members, geographically dispersed throughout the United States such that joinder of all class members is impracticable. The identity of Class members can be determined from the internal records of Volkswagen.

95. Plaintiffs' claims are typical of the claims of the Class and Subclasses in that Plaintiffs purchased or leased a Class Vehicle from a Volkswagen Authorized Dealer in the United States. All Class and Subclass members were damaged by the same wrongful conduct of Defendants and their co-conspirators as alleged herein, and the relief sought is common to the class.

96. Common questions of law and fact predominate over any individual questions. These questions include, but are not limited to:

- Whether Volkswagen unlawfully acquired a monopoly in the Clean Diesel Car Market;
- Whether the Clean Diesel Car Market is a properly defined product market for purposes of Section 2 of the Sherman Act;
- Whether Volkswagen's acquisition and/or maintenance of a monopoly in the Clean Diesel Car Market had the effect of increasing to supracompetitive levels the retail prices of Class Vehicles;
- Whether Volkswagen violated the CAA and applicable regulations;
- Whether Volkswagen violated California Pollution Control laws and applicable

regulations;

- Whether Volkswagen's conduct violated RICO;
- Whether the Volkswagen RICO Enterprise as defined herein is a cognizable RICO enterprise;
- Whether Volkswagen committed federal mail and wire fraud, thus establishing predicate acts under RICO:
- Whether Volkswagen engaged in a pattern of racketeering activity;
- Whether Plaintiffs and Class members were injured in their business or property, and, if so, what is the appropriate measure of their damages;
- Whether Volkswagen misrepresented the environmental impact of its Class Vehicles;
- Whether Volkswagen misrepresented the Class Vehicles' emission standards compliance, fuel efficiency or performance;
- Whether Volkswagen violated the Magnuson-Moss Warranty Act;
- Whether Volkswagen violated California's Consumer Legal Remedies Act;
- Whether Volkswagen violated California's Unfair Competition Law;
- Whether Volkswagen violated California's False Advertising Law;
- Whether Volkswagen violated Virginia's Consumer Protection Law;
- Whether Volkswagen committed fraudulent concealment;
- Whether Volkswagen was unjustly enriched;
- Whether Plaintiffs and the other members of the Class and Subclasses were injured by Defendants' conduct, and, if so, the appropriate classwide measure of damages for Class members; and
- The scope of any injunctive and other equitable relief to which Plaintiffs and the other members of the Class and Subclasses are entitled.

97. These and other questions of law and fact are common to the Class and Subclasses

VW FOIA, EPA 06/20/2017 2017-FFP_030905

predominate over any questions affecting only individual Class members.

98. Plaintiffs' claims are typical of the claims of the Class and Subclasses because Plaintiffs purchased a Class Vehicle from a Volkswagen Authorized Dealer in the United States.

99. Plaintiffs will fairly and adequately represent the interests of the Class and Subclasses in that they have no conflict with any other members of the Class and Subclasses. Furthermore, Plaintiffs have retained competent counsel experienced in antitrust, class action, and other complex litigation.

100. Defendants have acted on grounds generally applicable to the Class, thereby making final injunctive relief appropriate with respect to the Class and Subclasses as a whole.

101. This class action is superior to the alternatives, if any, for the fair and efficient adjudication of this controversy. Prosecution as a class action will eliminate the possibility of repetitive litigation. There will be no material difficulty in the management of this action as a class action. The prosecution of separate actions by individual Class and Subclass members would create the risk of inconsistent or varying adjudications, establishing incompatible standards of conduct for Defendants.

CAUSES OF ACTION

FIRST CLAIM

Violation of the Section 2 of the Sherman Antitrust Act (Monopolization) (15 U.S.C. § 2).

102. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

103. The relevant product market for purposes of Plaintiffs' claims under Section 2 of the Sherman Act is the Clean Diesel Car Market, which, as noted above, consists of: (a) the product market of Clean Diesel passenger cars and (b) a geographic market consisting of the United States. All diesel fuel sold in the United States during the relevant period is "clean diesel fuel", with 97% less sulfur than the diesel sold in the 1970s. Similarly, all diesel cars sold in the United States since 2007 (which have had to meet the same emission standards as gasoline engines) have advanced engines and emissions control technology that make the diesel engines cleaner than in

VW FOIA, EPA 06/20/2017 2017-FFP_030906

the past, are able to take advantage of the clean diesel fuel, and use exhaust systems that further reduce diesel engine emissions.

104. As Volkswagen's own market research and market research by others described above have demonstrated, clean diesel cars are not in the same relevant market as gasoline or even hybrid cars of similar size and class. Diesel engines require the use of a different and more expensive fuel than gasoline-powered engines, can travel much greater distances on a single tank of fuel, and are more expensive. Unlike hybrid or electric vehicles, diesel-powered vehicles do not have to be plugged in, can travel greater distances without refueling or plugging in, and -- particularly with more recent compression technology like the Volkswagen's TDI engines -- have greater torque, acceleration, and towing power. In addition, the demographics of the clean diesel buyers are distinct from those of hybrid buyers; they are more likely to be male, younger, and less likely to have children.

105. At all relevant times, Volkswagen has been a competitor in the Clean Diesel Car Market, and has maintained significant market share. As the chart presented by Skorupski of VWoA depicted above demonstrates, Volkswagen's share of the Clean Diesel Car Market has been 70% or more during the entire relevant period.

106. Barriers to entry in the Clean Diesel Car Market are high. In addition to the barriers to entry and expansion posed by Volkswagen's anticompetitive conduct, as described in this Complaint, other barriers to entry include: high research and development costs, high costs of making diesel engines that are EPA- and CARB-compliant, and high capital costs.

107. Consumers, experts and commentators in the automotive industry, and the automobile manufacturers themselves, including Volkswagen, all recognize the Clean Diesel Car market as distinct from markets including gasoline, hybrid, or electric cars.

108. Volkswagen has monopoly power in the Clean Diesel Car Market.

109. Through the anticompetitive use of the defeat device and its deception of the EPA, CARB, Plaintiffs, and the Class, Volkswagen has willfully acquired and/or maintained its

VW FOIA, EPA 06/20/2017 2017-FFP_030907

monopoly of the Clean Diesel Car Market. This conduct has harmed competition in that market, and has caused injury to every person that purchased or leased a Class Vehicle. The purchase or lease price was higher than it would have been in a competitive market; the supply and selection of products was lower than it would have been in a competitive market; innovation has been stifled; and the number and effectiveness of competitors in that Market has been diminished by unlawful means.

110. As a result of this violation of law, the price of Class Vehicles was higher than it otherwise would have been.

111. There is no legitimate business justification for the conduct described in this Complaint which has facilitated Volkswagen's monopolization of the Clean Diesel Car Market.

112. The anticompetitive conduct described in this Complaint has caused injury to the business or property of Plaintiffs and members of the Class and is in violation of section two the Sherman Act (15 U.S.C. § 2).

113. Plaintiffs are buyers of Class Vehicles in the Clean Diesel Car Market; they are thus direct participants in the monopolized market. Volkswagen issues warranties directly to Class Vehicle buyers. The Volkswagen Authorized Dealers[103] obtain Class Vehicles from Volkswagen (through its American subsidiaries) that are certified to be EPA- and/or CARB-compliant and, as noted above, have visible stickers to that effect. The emissions testing that is used to justify those certifications is undertaken by VWoA in the United States.[104] Class Vehicles so labeled are

[103] In a recent recall notice unrelated to Dieselgate, Volkswagen has indicated that it has 652 authorized dealers in the United States. https://media.vw.com/doc/1456/volkswagen_issues_voluntary_recall-tiguan_label_recall_release-17883691505565f01ccc4bb.pdf. Their names and addresses can be identified through Volkswagen's records. The Volkswagen Authorized Dealers have a 12-person National Dealer Advisory Council that interacts closely with VWoA on such issues as company management.

[104] http://www.manufacturing.net/news/2015/10/vw-pollution-test-site-under-scrutiny-amid-emissions-cheating-scandal.

displayed on the showroom floors of Volkswagen Authorized Dealers. The false certifications by Volkswagen were one of the critical elements of its unlawful scheme of monopolization. The Volkswagen Authorized Dealers were agents of Volkswagen for the purpose of disseminating these false certifications and representations by Volkswagen to customers in order to induce them to purchase TDI Clean Diesel vehicles. In addition, Volkswagen (through its American subsidiaries) sets the Manufacturer's Suggested Retail Price ("MSRP") for Class Vehicles, which includes the premium for the TDI Clean Diesel technology described herein. While Volkswagen Authorized Dealers could charge customers a price less than the MSRP (such as when Volkswagen provides rebates or short-term retail promotions), that lesser price is nonetheless keyed off the MSRP and still contains a portion of the premium for the sham TDI Clean Diesel technology. This case involves retail prices for Class Vehicles paid by consumers like plaintiffs, who are participants in the relevant market and who pay more for those vehicles because of Volkswagen's illegal monopolistic practices.

SECOND CLAIM

Violation of Section 2 of the Sherman Antitrust Act (Attempted Monopolization) (15 U.S.C. § 2).

114. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

115. Volkswagen has acted with specific intent to monopolize the Clean Diesel Car Market as described above through the anticompetitive use of the defeat device and its deception of the EPA, CARB, Plaintiffs, and the Class.

116. There was and is a dangerous probability that Volkswagen will succeed in its attempt to monopolize the Clean Diesel Car Market because Volkswagen controls a large percentage of that market and has the ability to and actually did exclude competitors through the anticompetitive conduct described in this Complaint.

117. Volkswagen's conduct has harmed competition in the Clean Diesel Car Market, making the supply and selection of available Clean Diesel Cars lower than it would be in a competitive market.

VW FOIA, EPA 06/20/2017 2017-FFP_030909

118. There is no legitimate business justification for the conduct described in this Complaint which has facilitated Volkswagen's monopolization of the Clean Diesel Car Market.

119. The anticompetitive conduct described in this Complaint has caused injury to the business or property of Plaintiffs and members of the Class and is in violation of the Sherman Act (15 U.S.C. § 2).

THIRD CLAIM

Violation of the Racketeer Influenced and Corrupt Organizations Act ("RICO") (18 U.S.C. §§ 1962(c), 1964).

120. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

121. Each Plaintiff is a "person" within the meaning of 18 U.S.C. § 1964(c), and each has sustained injury to his or her business or property as a result of Volkswagen's conduct described in this Complaint.

122. Each Defendant is a "person" within the meaning of 18 U.S.C. § 1961(3).

123. Defendants violated 18 U.S.C. §1962(c) by participating in or conducting the affairs of the Volkswagen RICO Enterprise through a pattern of racketeering activity.

124. For the past seven years, Volkswagen has engaged in a deliberate, pre-meditated and continuous effort to deceive Plaintiffs, members of the Class, and federal and state regulators into believing that the Class Vehicles are environmentally-friendly, fuel-efficient, and EPA- and CARB-compliant. Unknown to Plaintiffs, Class members and federal and state regulators, Volkswagen installed pollution control defeat devices into the Class vehicles that turned off the pollution controls when the cars were in normal operating mode.

125. Plaintiffs and Class members had no way of knowing that these systems were disabled by Volkswagen. Pursuant to the CAA, Volkswagen was required to equip its cars with on-board diagnostic systems that trigger a dashboard "check engine" light that alerts the driver of a possible pollution control device malfunction. The Class Vehicles' diagnostic systems did not trigger this "check engine light," because the defeat device was designed to evade EPA and CARB pollution controls.

VW FOIA, EPA 06/20/2017 2017-FFP_030910

126. In dozens of advertising campaigns and statements and in certifications of EPA and CARB compliance Volkswagen has falsely represented the Class Vehicles' "green credentials" and performance.

127. Volkswagen engaged in a common course of conduct and conspiracy with the common purpose of defrauding Plaintiffs and members of the Class into purchasing Class Vehicles at artificially inflated prices.

The Volkswagen RICO Enterprise.

128. Volkswagen conducted the affairs of an association-in-fact enterprise (the "Volkswagen RICO Enterprise") through a pattern of racketeering activity, in violation of 18 U.S.C. § 1962(c).

129. The enterprise engaged in and continues to engage in interstate commerce, and its activities affect interstate commerce.

130. The Volkswagen RICO Enterprise is an association-in-fact enterprise comprised of the Defendants and Volkswagen Authorized Dealers in the United States. Each participant in the Enterprise played a designated, well-defined role in the affairs of the Volkswagen RICO Enterprise.

131. Volkswagen designed, manufactured, and sold to Volkswagen Authorized Dealers the Class Vehicles containing the defeat devices that are the subject of this Complaint. Volkswagen developed the advertising campaigns that misrepresented to Plaintiffs and Class members the true nature of the Class Vehicles, which were not, contrary to Defendants' misrepresentations, environmentally-friendly, fuel-efficient, or EPA- or CARB-compliant. Volkswagen deceptively certified the Class Vehicles as EPA- and CARB-compliant. And Volkswagen lied to CARB and EPA officials about the full nature and extent of the problem.

132. The Volkswagen Authorized Dealers that sold and leased the Class Vehicles to Plaintiffs and members of the Class were a critical element of the Volkswagen RICO Enterprise. Volkswagen sold the Class Vehicles to Volkswagen Authorized Dealers, who then sold or leased

VW FOIA, EPA 06/20/2017 2017-FFP_030911

them to Plaintiffs and members of the Class. Whether or not the Volkswagen Authorized Dealers knew that the Class Vehicles contained defeat devices that made Volkswagen's advertisements and representations false, the Volkswagen Authorized Dealers displayed those advertisements and repeated those misrepresentations. Indeed, Volkswagen required Volkswagen Authorized Dealers to display and repeat those misrepresentations in the Volkswagen and Audi Standard Dealer Agreements.

133. The Volkswagen RICO Enterprise has an ascertainable structure and purpose beyond the scope and commission of Volkswagens' predicate acts and conspiracy to commit such acts. The Enterprise is separate and distinct from Defendants, and functions as a continuing unit. The members of the Enterprise have distinct and separate roles and responsibilities.

134. At all relevant times, Volkswagen operated, controlled or managed the Volkswagen RICO Enterprise. Volkswagen's participation was critical for the success of the scheme to defraud because Volkswagen manufactured the Class Vehicles, designed and installed the defeat devices, and concealed those devices from Plaintiffs, Class members and regulatory authorities.

135. Section 1961(1)(B) of RICO defines "racketeering activity" as any act indictable under 18 U.S.C. §§1341 (mail fraud) and 1343 (wire fraud), among other statutes. As described in this Complaint, Volkswagen's conduct violated both of these laws.

136. Volkswagen conducted the affairs of the Volkswagen RICO Enterprise through a "pattern of racketeering activity," as defined by 18 U.S.C. §1961(5) by committing at least two acts of racketeering activity, *i.e.*, indictable violations of 18 U.S.C. §§1341 and 1343, within the past ten years. In fact, Volkswagen has committed dozens of acts of racketeering activity. Each racketeering act was related, had a similar purpose, involved the same or similar participants and method of commission, had similar results and impacted similar victims, including the Plaintiffs and members of the Class.

137. Defendants' multiple acts of racketeering activity were related to each other and amount to continued racketeering activity, and therefore constitute a "pattern of racketeering

VW FOIA, EPA 06/20/2017 2017-FFP_030912

activity" as defined in 18 U.S.C. §1961(5).

Predicate Act Violations of 18 U.S.C. §§1341 and 1343.

138. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §1341 (mail fraud), placed in post offices and/or in authorized repositories, matter and things to be sent or delivered by the U.S. Postal Service, caused matter and things to be delivered by commercial interstate carriers, and received matter and things from the U.S. Postal Service and/or commercial interstate carriers, including, but not limited to, advertising materials, marketing and sales materials, correspondence, contracts, sales and leasing documents, Certificates of Compliance, communications with the EPA, CARB and other regulatory officials, and other materials relating to the Class Vehicles sold and leased to Plaintiffs and Class members.

139. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §1343 (wire fraud), transmitted and received by wire, matter and things, which include, but are not limited to, advertising materials, marketing and sales materials, correspondence, contracts, sales and leasing documents, Certificates of Compliance, communications with the EPA, CARB, and other regulatory officials, and other materials relating to the Class Vehicles sold and leased to Plaintiffs and Class members.

140. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §§1341 and 1343, made numerous material misrepresentations about the Class Vehicles' environmental impact, fuel efficiency, and EPA- and CARB-compliance, and made many material omissions of fact, including concealing that the cars contained defeat devices that rendered them non-compliant with applicable emissions standards. Volkswagen made these misrepresentations and omissions with the intent and effect of inducing Plaintiffs to rely on such misrepresentations and omissions.

141. Defendants' misrepresentations, omissions of material facts, acts of concealment, and failures to disclose, were knowing and intentional, and made for the purpose of deceiving

VW FOIA, EPA 06/20/2017 2017-FFP_030913

Plaintiffs and Members of the Class into purchasing and leasing Class Vehicles.

142. Defendants either knew or recklessly disregarded the fact that the misrepresentations and omissions described above and incorporated herein were material, and Plaintiffs and Class members relied on the misrepresentations and omissions as set forth above.

143. Volkswagen's affirmative and deliberate misrepresentations regarding the Class Vehicles' environmental friendliness, fuel efficiency and performance, and omission of the true facts, were material factors in inducing Plaintiffs and Class members to purchase and lease the Class Vehicles. Plaintiffs and Class members relied on those misrepresentations and omissions and would have not purchased or leased the vehicles in their absence, or, at a minimum, would have paid significantly less than they did.

144. Each act of deception, as described in this Complaint, constitutes a violation of 18 U.S.C. §§1341 (mail fraud) or 1343 (wire fraud), and constitutes an act of "racketeering activity" as defined in 18 U.S.C. §1961(5).

145. As a result, Plaintiffs and Class members have been injured in their business and property within the meaning of 18 U.S.C. §1964(c). Plaintiffs' and Class members' damages include, but are not limited to: purchasing or leasing Class Vehicles that they would not otherwise have purchased or leased; paying more for Class Vehicles than they would have otherwise paid if they had known the true facts concerning the defeat devices; and purchasing Class Vehicles, the value of which has been severely diminished, thus reducing their residual and/or resale value.

146. Volkswagen's RICO violations directly and proximately caused injury to the business and property of Plaintiffs and Class members, and Plaintiffs and Class members are entitled to three times their actual damages, as well as injunctive and other equitable relief, plus their costs and reasonable attorneys' fees.

FOURTH CLAIM

Violation of the Magnuson-Moss Warranty Act (15 U.S.C.§ 2301 *et seq.*)

147. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

VW FOIA, EPA 06/20/2017 2017-FFP_030914

148. Plaintiffs and the Class bring this claim under the Magnuson-Moss Warranty Act, 15 U.S.C. § 2301 *et seq.*

149. The Class Vehicles are consumer products as defined in 15 U.S.C. §2301(1).

150. Volkswagen is a supplier and warrantor as defined in 15 U.S.C. §2301(4), (5).

151. Plaintiffs and the Class received written warranties as defined in 15 U.S.C. §2301(6)(A) and/or (B), which Volkswagen has breached.

152. Plaintiffs and the Class are "consumers" as defined in 15 U.S.C. §2301(3). They are consumers because they bought a Class Vehicle and are entitled to enforce both written and implied warranties.

153. Pursuant to 15 U.S.C. § 2310(e), Plaintiffs and the Class are not required to provide Defendants notice of this class action and an opportunity to cure until the time the Court determines the representative capacity of Plaintiffs pursuant to Fed.R.Civ.P. 23.

154. Volkswagen is liable to Plaintiffs and the Class pursuant to 15 U.S.C. § 2310(d)(l) because it breached its written warranties.

155. Further, in connection with the sale of the Class Vehicles, Volkswagen gave an implied warranty under the Act. As part of that implied warranty, Volkswagen warranted that the Class Vehicle complied with all applicable federal and state regulations, including emission regulations. Volkswagen breached the implied warranty of merchantability.

156. Plaintiffs and the Class are entitled to damages caused by Volkswagen's breaches of the warranties, including economic damages based upon either a return of Plaintiffs' and Class Members purchase price; and/or the difference between the price paid for the Class Vehicle as warranted and the actual value of the Class Vehicle as delivered, and consequential damages.

157. In addition, Plaintiffs and the Class are entitled to reasonable attorneys' fees and costs as determined by the Court.

VW FOIA, EPA 06/20/2017 2017-FFP_030915

FIFTH CLAIM

Violations of the Consumers Legal Remedies Act (California Civil Code § 1750 *et seq.*)

158. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

159. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

160. This cause of action is brought pursuant to the California Consumers Legal Remedies Act ("CLRA"), Civil Code §1750, *et seq*. Plaintiffs bring this action on their own behalf and on behalf of the California Subclass, all of whom are similarly situated consumers within the meaning of Civil Code §1781.

161. The acts and practices described in this Complaint were intended to result in the sale of goods, specifically a motor vehicle, in consumer transactions. Volkswagen has violated, and continue to violate California Civil Code § 1770, subdivisions (a)(9), (a)(7), (a)(16), and (a)(5) by:

- Representing to consumers purchasing the Class Vehicles that these vehicles' emissions, fuel efficiency and high performance are as advertised and publicized.
- Representing in their advertising emissions, environmental, fuel efficiency and performance characteristics for the Class Vehicles that are false.

162. Plaintiffs Bourn, Watson, and Verner and the California Subclass members have suffered harm as a result of these violations.

163. Plaintiffs Bourn, Watson, and Verner and California Subclass members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Class Vehicles believing, based on Volkswagen's representations, that the Class Vehicles had certain characteristics that made them environmentally friendly, fuel efficient and high performance, when in fact these vehicles cannot have these fuel efficient and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Class Vehicles and the subsequent revelation

VW FOIA, EPA 06/20/2017 2017-FFP_030916

concerning the "defeat devices" will result in lower resale value.

164. Volkswagen concealed from Plaintiffs Bourn, Watson, and Verner accurate information concerning the emissions standards, fuel efficiency and performance of the California Subclass Vehicles.

165. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were intentional, or alternatively, made without the use of reasonable procedures adopted to avoid such errors.

166. Volkswagen, directly or indirectly, has engaged in substantially similar conduct with respect to Plaintiffs Bourn, Watson, and Verner and to each member of the California Subclass.

167. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, members of the consuming public will be further damaged by Volkswagen's conduct.

168. Plaintiffs Bourn, Watson, and Verner and the Class are entitled to equitable relief on behalf of the members of the California Subclass in the form of an order, pursuant to Civil Code §1780, subdivision (a)(2)-(5), prohibiting Volkswagen from continuing to engage in the above-described violations of the CLRA. Plaintiffs Bourn, Watson, and Verner and the California Subclass further seek reasonable attorneys' fees under Civil Code §1780(e).

SIXTH CLAIM

Violation of California Unfair Competition Law (Cal. Bus. & Prof. Code § 17200, *et seq.*)

169. Plaintiffs Bourn, Watson, and Verner incorporate by reference each preceding and succeeding paragraph.

170. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

171. California Business & Professions Code §17200, *et seq.* prohibits acts of "unfair competition" which is defined by California Business & Professions Code § 17200 as including

VW FOIA, EPA 06/20/2017 2017-FFP_030917

any "any unlawful, unfair or fraudulent business act or practice ...."

172. Volkswagen has violated and continues to violate California Business & Professions Code §17200's prohibition against engaging in "unlawful" business acts or practices, by, inter alia, the following:

- Violating the CAA and applicable regulations;
- Violating California's Air Pollution Control laws and applicable regulations;
- Violating the Sherman Act;
- Violating RICO;
- Violating the Magnuson-Moss Act;
- Violating the CLRA; and
- Violating California's False Advertising Law.

173. Volkswagen also acted fraudulently and unfairly for purposes of section 17200. Volkswagen's misrepresentations and omissions regarding the Class Vehicles' emissions, environmental standards, fuel efficiency, and performance in their advertising, public statements and marketing were a material factor in inducing Plaintiffs Bourn, Watson, and Verner to purchase their Class Vehicle. Plaintiffs Bourn, Watson, and Verner suffered injury in fact and lost money and/or property as a result of Volkswagen's unlawful business acts and practices and California Subclass members have suffered harm when each was required to pay a purchase price for their Class Vehicles which they never would have purchased if the true facts were known; or paid a price in excess of what a California Subclass member would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics and in the form of decreased resale value of the Vehicles.

174. As a result of Volkswagen's violations of the California Business & Professions Code §17200, *et seq.*, Plaintiffs Bourn, Watson, and Verner and California Subclass members are entitled to equitable relief in the form of full restitution for the inflated sale price of the Vehicles.

VW FOIA, EPA 06/20/2017 2017-FFP_030918

175. Plaintiffs Bourn, Watson, and Verner and California Subclass members also seek an order enjoining Volkswagen from continuing their unlawful business practices and from such future conduct.

SEVENTH CLAIM

Violation of the California False Advertising Law (Cal. Bus. & Prof. Code § 17500, *et seq.*)

176. Plaintiffs Bourn, Watson, and Verner incorporate by reference each preceding and succeeding paragraph.

177. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

178. Volkswagen violated California's False Advertising Law, Business & Professions Code §17500, *et seq.*by using false and misleading messages regarding the environmental friendliness, emissions, fuel efficiency and performance of the Class Vehicles in television, print, and Internet advertising.

179. These representations and/or omissions have deceived and are likely to deceive Plaintiffs Bourn, Watson, and Verner, the California Subclass, and consumers across the country in connection with their decision to purchase Class Vehicles. Volkswagen's representations and/or omissions were material and constituted a substantial and material factor in Plaintiffs Bourn and Watson's decision to purchase their Class Vehicle. Had Plaintiffs Bourn, Watson, and Verner known the actual facts, they would not have purchased the Class Vehicles and/or paid more than they would have had Volkswagen accurately disclosed the Class Vehicles' true characteristics.

180. Volkswagen directly and indirectly, has engaged in substantially similar conduct with respect to each Plaintiff and to each member of the California Subclass.

181. Plaintiffs Bourn, Watson, and Verner suffered injury in fact and lost money and/or property as a result of Volkswagen's false and misleading advertising and California Subclass members suffered harm when each was required to pay a purchase price in excess of what a

VW FOIA, EPA 06/20/2017 2017-FFP_030919

California Subclass member would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics and in the form of decreased resale value of the Class Vehicles.

182. As a result of Volkswagen's violations, Plaintiffs Bourn, Watson, and Verner and California Subclass members are entitled to equitable relief in the form of full restitution of all monies paid for the sales price of the Vehicles, diminished value of the Class Vehicles, and/or disgorgement of the profits derived from Volkswagen's false and misleading advertising.

183. Plaintiffs Bourn, Watson, and Verner also seek an order enjoining Volkswagen from such future conduct.

EIGHTH CLAIM

Violation of the Virginia Consumer Protection Act (Va. Code Ann. §§59.1-196, *et seq.*)

184. Plaintiff Schumacher incorporates by reference each preceding and succeeding paragraph.

185. Plaintiff Schumacher brings this Claim on behalf of the Virginia Subclass, which is cognizable in this Court pursuant to *Shady Grove Orthopedic Assocs., P.A. v. Allstate Ins. Co.*, 559 U.S. 393 (2010).

186. Defendants are "persons" within the meaning of Va. Code Ann. §59.1-200(A).

187. Volkswagen violated the Virginia Consumer Protection Act, which prohibits "...(5) misrepresenting that goods or services have certain quantities, characteristics, ingredients, uses, or benefits; (6) misrepresenting that goods or services are of a particular standard, quality, grade, style, or model; ... (8) advertising goods or services with intent not to sell them as advertised ...; [and] (14) using any other deception, fraud, false pretense, false promise, or misrepresentation in connection with a consumer transaction[.]" Va. Code Ann. §59.1-200(A).

188. These representations and/or omissions have deceived and are likely to deceive Plaintiff Schumacher, the Virginia Subclass, and consumers across the country in connection with their decision to purchase Class Vehicles. Volkswagen's representations and/or omissions were material and constituted a substantial and material factor in Plaintiff Schumacher's decision to

purchase their Class Vehicle. Had Plaintiff Schumacher and Virginia Subclass members known the actual facts, they would not have purchased the Class Vehicles and/or would have paid less for them.

189. Volkswagen, directly and indirectly, has engaged in substantially similar conduct with respect to each Plaintiff and to each member of the Virginia Subclass.

190. Plaintiff Schumacher and Virginia Subclass members suffered injury in fact and lost money and/or property as a result of Volkswagen's Violations of the Virginia Consumer Protection Act. Plaintiff Schumacher and Virginia Subclass members suffered harm when each was required to pay a purchase price in excess of what they would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics; they also suffered harm in the form of decreased resale value of the Class Vehicles.

191. As a result of Volkswagen's violations, Plaintiff Schumacher and Virginia Subclass members are entitled to three times the amount of actual damages or $1000, whichever is greater, as well as costs and attorneys' fees. Va. Code Ann. §§59.1-204(a), (b).

NINTH CLAIM
Unjust Enrichment

192. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

193. Plaintiffs bring this claim for unjust enrichment on behalf of the nationwide Class under the common law of unjust enrichment, as there are no true conflicts (case-dispositive differences) among various states' laws of unjust enrichment.

194. In the alternative, Plaintiffs bring this claim on behalf of the nationwide Class under Virginia law, because the Defendants' United States operations are headquartered in Virginia and Virginia has the most significant relationship to the issues and facts relevant to this claim.

195. Volkswagen received and retained a benefit from the Plaintiffs and inequity has resulted.

196. Volkswagen benefitted through its unjust conduct, by selling Class Vehicles subject

VW FOIA, EPA 06/20/2017 2017-FFP_030921

to the misrepresentation that they were EPA- and/or CARB-compliant and by failing to disclose its use of a defeat device in these vehicles.

197. Plaintiffs, were charged a premium based on this misrepresentation, overpaid for these vehicles as a result, and/or would not have purchased these vehicles at all had their noncompliance with federal and state emissions laws been disclosed.

198. It is inequitable for Volkswagen to retain these benefits.

199. Plaintiffs do not have an adequate remedy at law.

200. As a result of Volkswagen's conduct, the amount of its unjust enrichment should be disgorged, in an amount to be proven at trial.

TENTH CLAIM
Unjust Enrichment

201. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

202. Plaintiffs bring this claim for unjust enrichment on behalf of the nationwide Class under the common law of fraudulent concealment, as there are no true conflicts (case-dispositive differences) among various states' laws of fraudulent concealment.

203. In the alternative, Plaintiffs bring this claim on behalf of the nationwide Class under Virginia law, because the Defendants' United States operations are headquartered in Virginia and Virginia has the most significant relationship to the issues and facts relevant to this claim.

204. Volkswagen concealed and suppressed the material facts that the Class Vehicles did not comply with federal and state emissions laws and were spewing illegal amounts of NOx when they were represented to be EPA- and/or CARB-compliant. It also concealed and suppressed the material fact that the Class Vehicles were equipped with a defeat device that prevented their proper testing under laboratory conditions for compliance with federal and state emissions laws and regulations.

205. Volkswagen took the various steps described herein to effectuate that concealment, such as false advertising and in false statements of compliance with federal and state emissions

VW FOIA, EPA 06/20/2017 2017-FFP_030922

laws and regulations affixed to each of the Class Vehicles

206. Volkswagen took steps to ensure that its employees did not reveal these concealed facts to federal and state environmental regulators.

207. Volkswagen had a duty to disclose the concealed information because it:

- Had exclusive and/or far superior knowledge and access to the facts than Plaintiffs and Class Members, and it knew the facts were not known to or reasonably discoverable by Plaintiffs and the Class;
- Intentionally concealed the foregoing from Plaintiffs; and
- Made incomplete representations about the compliance of the Class Vehicles with federal and state emissions laws and regulations, while purposefully withholding material facts from Plaintiffs that contradicted these representations.

208. These omitted and concealed facts were material because they would be relied on by a reasonable person purchasing, leasing or retaining the Class Vehicles, and because they directly impact the price paid for the Class Vehicles and their resale value. Whether the Class Vehicles comply with federal and state emissions laws and regulations is a material concern to a consumer. Plaintiffs and Class Members trusted Volkswagen not to sell or lease them vehicles that were non-compliant.

209. Volkswagen concealed and suppressed these material facts to falsely assure purchasers and consumers that the Class Vehicles complied with federal and state emissions laws and regulations, as represented by Volkswagen and reasonably expected by consumers.

210. Volkswagen actively concealed and/or suppressed these material facts, in whole or in part, to protect its profits and to avoid recalls that would hurt the brand image of the Class Vehicles and cost Volkswagen money. Volkswagen concealed these facts at the expense of Plaintiffs and the Class.

211. Plaintiffs and the Class were unaware of these omitted material facts, and would not have acted as they did if they had known of the concealed and/or suppressed information.

VW FOIA, EPA 06/20/2017 2017-FFP_030923

212. Had they been aware of the non-compliance of the Class Vehicles with federal and state emissions laws and regulations and Volkswagen's callous disregard for those laws and regulations, Plaintiffs and the Class either would have paid less for their Class Vehicles or would not have purchased or leased them at all. Plaintiffs did not receive the benefit of their bargain as a result of Volkswagen's fraudulent concealment.

213. Because of the concealment and/or suppression of the facts, Plaintiffs and the Class sustained damage because they own vehicles that diminished in value as a result of Volkswagen's concealment of, and failure to timely disclose, the non-compliance of the Class Vehicles with federal and state emissions laws and regulations.

214. The value of all Class members' Class Vehicles has diminished as a result of Volkswagen's fraudulent concealment of the non-compliance of the Class Vehicles with federal and state emissions laws and regulations and has made any reasonable consumer reluctant to purchase any of the Class Vehicles, let alone pay what otherwise would have been fair market value for the vehicles.

215. Accordingly, Volkswagen is liable to the Class for their damages in an amount to be proven at trial.

216. Volkswagen's acts were done maliciously, oppressively, deliberately, with intent to defraud, and in reckless disregard of Plaintiffs' and the Class's rights and well-being, and with the aim of enriching Volkswagen. Volkswagen's conduct, which exhibits the highest degree of reprehensibility, being intentional, continuous, placing others at risk of death and injury, and affecting public safety, warrants an assessment of punitive damages in an amount sufficient to deter such conduct in the future, which amount is to be determined according to proof.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray that the Court enter judgment on their behalf and on behalf of the Class and the California and Virginia Subclasses, and:

A. Order the appointment of an independent External Compliance Monitor to monitor

VW FOIA, EPA 06/20/2017 2017-FFP_030924

Volkswagen's compliance with federal and state environmental laws;

B. Order Volkswagen to pay a portion of its annual net profits into an independent fund administered by third parties approved by the Court who can disburse the funds to non-profit organizations that seek to monitor, educate people about, and/or remediate the deleterious environmental effects of vehicular diesel fuel emissions;

C. Order that this action may proceed as a class action, with Plaintiffs as the designated Class representatives for the Class; Plaintiffs Bourn, Watson, and Verner as designated Class representatives for the California Subclass; Plaintiff Schumacher as designated Class representative for the Virginia Subclass, and Plaintiffs' counsel as Class and Subclass Counsel;

D. Adjudge and decree that Volkswagen has violated the CAA, California Pollution Control laws, the Sherman Act, RICO, the Magnuson-Moss Act, the CLRA, California's Unfair Competition Law, California's False Advertising Law; the Virginia Consumer Protection Act, and the common law of unjust enrichment and fraudulent concealment and that Plaintiffs and the members of the Class and the California and Virginia Subclasses have been injured in their business and property as a result of Volkswagen's violations;

E. Order that Plaintiffs and the members of the National Class and California Subclass recover damages sustained by them, to the extent provided by law, and that a judgment in favor of Plaintiffs and the Class and the California and Virginia Subclasses be entered against Volkswagen in an amount to be trebled in accordance with such laws;

F. To the extent provided by law, enjoin and restrain Volkswagen, its subsidiaries, affiliates, successors, transferees, assignees and the respective officers, directors, partners, agents, and employees thereof and all other persons acting or claiming to act on their behalf from continuing to violate the CAA, California Pollution Control laws, the Sherman Act, RICO, the Magnuson-Moss Act, CLRA, California's Unfair Competition Law, California's False Advertising Law, the Virginia Consumer Protection Act, and the common law of unjust enrichment and fraudulent concealment;

VW FOIA, EPA 06/20/2017 2017-FFP_030925

G. Order Volkswagen to pay restitution or damages to Plaintiffs and members of the Class and the California and Virginia Subclasses and to disgorge the profits unlawfully acquired and retained by Volkswagen;

H. Award Plaintiffs and members of the Class and the California and Virginia Subclasses pre-judgment and post-judgment interest, and order that such interest be awarded at the highest legal rate from and after the date of service of the initial complaint in this action;

I. Award Plaintiffs and members of the Class and the California and Virginia Subclasses their costs of this suit, including reasonable attorneys' fees as provided by law; and

J. Order such other or further relief as may be just and proper.

IX. JURY TRIAL DEMAND.

Pursuant to Federal Rule of Civil Procedure 38(b), Plaintiffs demand a trial by jury of all of the claims asserted in this Complaint so triable.

EPA's New Volkswagen Probe May Reveal Failure to Disclose

Elisabeth Behrmann Jeff Plungis

Agency looking into computer program that affects emissions

VW recently revealed second software program to regulator

The U.S. Environmental Protection Agency is investigating a second emissions-control software program on Volkswagen AG cars that were rigged to pass pollution tests, one that the automaker may have failed to properly disclose.

The computer program is on the EA 189 diesel engines used since 2009 that are also fitted with software that the automaker has admitted was designed to fool emissions tests, according to a person familiar with the matter who asked not to be named because the information is private.

"VW did very recently provide EPA with very preliminary information on an auxiliary emissions control device that VW said was included in one or more model years," EPA spokesman Nick Conger said. The agency, as well as its California counterpart, "are investigating the nature and

purpose of this recently identified device."

The possibility of a second device under scrutiny will make it harder for Volkswagen to emerge from the crisis. Already, VW faces criminal and civil liability as a company, including more than 250 class-action lawsuits. Some of its executives also face individual charges, and investigators and prosecutors are trying to figure out just how widespread the cheating was.

Automakers are required to point out if engines have special operating modes that can affect the way pollution-control equipment works. Such programs aren't necessarily prohibited, and don't by themselves indicate an attempt to cheat, though carmakers are supposed to disclose them so regulators can adjust their tests to be sure the vehicles still meet standards.

2016 Application

Volkswagen has withdrawn applications for EPA certification of diesel vehicles for the 2016 model year. The company decided the newly disclosed technology qualified as an emissions-control device that the EPA needed to review, Michael Horn, the president and chief executive officer of Volkswagen of America, told Congress Thursday.

Jeannine Ginivan, a spokeswoman for Volkswagen of America, Inc., didn't have an immediate comment.

The probing of the second software feature in vehicles to be sold on 2016 models raised the possibility of VW's latest diesel engines being affected.

"Investors are traumatized by the events that have happened in the past, they will be paralyzed if VW's current diesel line-up has questionable software on board," Arndt Ellinghorst, a London-based analyst with Evercore ISI said in a note Oct. 9. "In our view this is a question VW needs to answer asap."

As many as 11 million diesel-powered autos worldwide have software designed to fool U.S. pollution testers. That includes 8 million cars in the European Union and 482,000 in the U.S., where regulators first detected the cheating. Volkswagen is delaying or canceling non-essential projects to limit spending after determining that the 6.5 billion euros ($7.4 billion) set aside to address the scandal won't be enough.

The California Air Resources Board spokesman Stanley Young declined to comment beyond saying the agency is engaged in the certification process.

Questions about the second software feature were previously reported by the New York Times.

AP (via Washington Post):

http://www.washingtonpost.com/business/technology/vw-may-compensate-owners-of-diesel-cars-for-loss-of-value/2015/10/09/082a262c-6e8a-11e5-91eb-27ad15c2b723_story.html

VW may compensate owners of diesel cars for loss of value

By Tom Krisher | AP October 9 at 9:31 AM

DETROIT — Volkswagen could compensate owners of diesel-powered cars that emit high levels of pollutants, possibly by paying them for the lost value of their vehicles, the company's top U.S. executive said.

Speaking to lawmakers investigating the emissions cheating, U.S. CEO Michael Horn also said fixing most of the 500,000 affected cars in the U.S. could take one to two years, possibly more. The fix, he said, would not hurt fuel mileage, but it could hinder the cars' performance, knocking one or two miles-per-hour off the top speed.

"There might be a slight impact on performance," Horn said Thursday to a subcommittee of the House Energy and Commerce Committee.

Horn told the committee that VW hasn't calculated how much value the scandal has cost owners of the affected cars. But earlier this week Kelley Blue Book said the value of VWs with 2-liter diesel engines had fallen 13 percent since mid-September. Used car values often drop in the fall, but the VW diesel drop was unusually large.

VW has admitted to installing so-called defeat devices on Volkswagen and Audi cars with four-cylinder diesel engines dating to the 2009 model year. The devices — actually software code — switch on pollution controls when the cars are being tested, but turn off the controls when the software determines that the cars are back on real roads. Affected models include the Jetta, Golf, Beetle, Passat and Audi A3. VW has said a total of 11 million cars worldwide have the software worldwide.

Under questioning from Rep. Jan Schakowsky, D-Ill., Horn said VW isn't considering offering owners loaner cars because the U.S. government says the diesels equipped with the defeat devices are safe to drive. The cars, though, emit 10 to 40 times the nitrogen oxide pollution that's allowed under federal law.

Horn said software changes alone will work to fix newer models, but 430,000 cars dating to 2009 will need mechanical repairs that are still being developed. Horn said engineers are working on either a larger catalytic converter that would treat nitrogen oxide, or a system that injects a chemical called urea into the exhaust.

Rep. Morgan Griffith, R-Va., asked if the urea system would require an extra storage tank that would take space from the cars' trunks. That also could affect the cars' value.

EPA Director of Transportation and Air Quality Christopher Grundler said the answer depends on the remedies VW offers to the agency. "We're going to take a very careful look at what impact this is going to have on owners," Grundler said.

Software alone will repair some newer Passat models, but they may need an additional sensor, Horn said. He didn't have an exact timeline on when the repairs might take place, but said it could take multiple years to develop the fix, get government approval and distribute parts to the company's U.S. dealers. The fixes may take five to 10 hours per car for dealership mechanics to complete, he said.

Horn conceded that the $7.3 billion (6.5 billion euros) VW has set aside so far to pay for the scandal may not be enough. Ultimately, the total cost will depend on fines from government agencies, how much it costs to fix the cars and the price tag for any compensation to customers.

The Guardian:

http://www.theguardian.com/sustainable-business/2015/oct/09/vw-bp-corporate-scandals-emissions-tests-oil-spill-horsemeat-rana-plaza

VW and the toxic problem of corporate amnesia

Scandals such as the BP oil spill, horsemeat and the recent revelations about VW raise serious questions about how to ensure companies don't repeat wrongdoing

André Spicer Friday 9 October 2015 09.10 EDT Last modified on Friday 9 October 2015 09.12 EDT

When it was revealed that VW had been cheating on emissions tests, people were shocked. The automaker that had styled itself as a champion of corporate social responsibility and clean technology suddenly no longer looked so ethical.

It turns out this is not the first time VW has cheated emissions tests. As far back as 1973, VW had been fitting defeat devices to cars. The company was pursued by the EPA and eventually settled out of court with a fine of $120,000 (£78,500). So why didn't VW learn its lesson?

Many companies readily forget costly lessons they learn following gross acts of irresponsibility. This is what happened in the Bangladeshi textile industry in the run-up to the collapse of Rana Plaza in 2013, despite multiple factory collapses and a factory fire in previous years.

In the past, companies would go to great lengths to avoid taking responsibility for wrongdoing. VW may have paid a fine in 1973, but the company admitted no responsibility. A similar thing happened following the financial crisis. When chiefs of the largest banks were called to explain themselves to the Treasury select committee, they expressed profound regret at the unfortunate turn of events. None of them accepted responsibility.

Companies more recently have started to admit culpability and ask for forgiveness. The former CEO of VW, Martin Winterkorn, for example, said sorry and outlined steps to put things right. This did not save Winterkorn, but is considered best practice by PR and crisis management experts.

Doing things differently

Saying sorry and claiming you are going to do something is one thing, learning from mistakes and wrongdoing is quite another.

Colleagues and I were puzzled by this corporate amnesia. We wanted to know why companies in so many industries are so bad at learning from their past bad practice. As we started looking deeper into corporate crises, we noticed that when a crisis occurs there is a clear pattern of response.

To begin with, companies go out of their way to play down the crisis. They do this by claiming the harm that the crisis has caused is not so bad. Then they shift the blame on to an individual or a small group of people. Volkswagen is a case in point – the automaker has started heaping blame for a collective failure on to the shoulders of just four people, the CEO and three divisional heads. Finally, they shift attention away from the scandal to another issue.

We also noticed that corporations often forget about deep crises such as the horsemeat scandal and Toshiba overstating its profits at an amazingly rapid rate. Three to six months after a crisis, there is usually almost no public discussion about what were once burning issues. After the initiate public fury passes, companies seemingly forget their own wrongdoing. They get rid of people who might remember what went wrong. If they don't fire people, they try to gag them with legal settlements. A third common tactic is sidelining people who were in the know by placing them in marginal roles.

There is a danger this could happen at VW. Already we have seen "clean skins" who were not attached to the emissions crisis replacing those who had some connection with it. While it's often vital to remove the CEO, the end result of getting rid of everyone involved is that the people who have learned painful lessons will not be around to remind others not to do it again.

Corporate amnesia

Once the immediate crisis has blown over, companies attempt to ensure it is wiped from people's long-term memory. Material artefacts such as failed technologies and traces of a collapsed building are disposed of, documents are shredded or made hard to access and media stories are drowned out with fresh online content.

Following one of the biggest oil spills in US history at San Luis Obispo in California, Unocal – a now defunct US oil company which was later acquired by Chevron Corporation – covered it up. Employees repeatedly lied in public about it and a culture of silence emerged around the spill within the company. As a result, 20m gallons of gasoline continued to seep into local sand dunes, fouling the groundwater and the beach. Unocal finally began speaking up about the spill after a whistleblower leaked the issue in the 1990s.

Forgetting about corporate scandals is a double-edged sword. On the one hand, putting past wrongdoing behind it helps a company to move on. For instance, BP wanted to move on from the oil spill in the Gulf of Mexico, not just because it is a drain on corporate resources but also because it continues to damage the company's reputation. One BP executive told me that, following the spill, she would not tell people she met who she worked for because she was so ashamed. Now things seem to have changed due to the passing of time and BP employees happily hand out their business cards.

But when companies fail to remember their past wrongdoing, there is a very real danger that they end up repeating the same bad behaviour again. This is what has happened at VW.

Next steps

When faced with a large-scale corporate crisis, firms need to show that they are doing something substantive. Following the explosion of the Piper Alpha oil platform in 1988, companies operating in the oil industry took practical steps to improve worker safety and showed they were taking safety issues seriously.

We're more than mere consumers, and business should remember that

John C. Havens

Companies also need to ensure they preserve the memory of what went wrong. This is hard because people naturally want to distance themselves. But forgetting makes it tough to learn. This means avoiding the knee-jerk reaction of doing a symbolic cleaning out of the company.

Companies also need to hold on to reminders of what went wrong. These might be stories of wrongdoing or even evidence of what went wrong. The US apparel maker Gore-Tex, for example, ritually celebrates failed projects with champagne. The idea is that by raising a glass to failure, it will help people to learn from it.

Other companies ensure that newcomers are told about times when things went disastrously wrong. For instance, there are many reminders of the explosion of the Challenger space shuttle in Nasa. Engineers working with the agency are often drilled in the failure as a case study of what can go wrong. This is a powerful reminder for employees of what not to do in the future.

Hi Nick, can you confirm this Bloomberg story that says EPA is investigating a second emissions-control software program, and also, can you confirm how many additional models this could impact, and how many cars? Can you also clarify how this is different from the ones already under investigation?

Best,

Amy

Automakers study efforts to boost recall completions

David Shepardson, Detroit News Washington Bureau 3:23 p.m. EDT October 7, 2015

Washington — One third of vehicle owners who received a recall notice say they are extremely or very concerned and 1 in 20 owners won't get repairs, a new survey released Wednesday shows.

Two major auto trade associations unveiled a new survey that looks at why about a quarter of all vehicle recalls are never completed.

The research comes as automakers recalled a record 63.95 million vehicles in 2014 in 803 campaigns. In the first eight months of 2015, automakers recalled more than 32.4 million vehicles vehicles — a figure that topped the prior record of 30.8 million vehicles recalled in all of 2004.

Several automakers are on pace for a record-setting number of recalls. And the total number of campaigns this year could come close to last year.

A newly emboldened National Highway Transportation Safety Administration has demanded recalls in more than a dozen instances — including Volkswagen, Ford Motor Co., and Nissan Motor Co. callbacks. NHTSA Chief Mark Rosekind caught the industry's attention when he suggested in January that automakers could recall more vehicles in 2015 than in 2014.

The Alliance of Automobile Manufacturers and Association of Global Automakers commissioned Public Opinion Strategies to conduct a survey of 1,500 vehicle owners, including those who reported receiving recall notices within the last two years, to explore reasons for consumer behavior related to the recalls. The agencies briefed NHTSA on the results Wednesday.

The findings show most owners take recalls seriously — with 70 percent of owners saying they would not feel safe ignoring a low-risk recall. Just over one-third of owners say they have not gotten a recall completed.

The auto groups poll asked owners about a series of ideas to see if consumers would agree to get vehicles fixed — including a recall notification on their vehicle from the EZ Pass system when driving through a toll booth — and more than half had said that would be effective.

A majority of those polled endorsed tying recalls to vehicle registration or when registering used cars.

General Motors Co. offered $25 gift cars last year to try to prod owners of vehicles recalled for ignition switch defects to get their vehicles repaired.

Rosekind has urged automakers, dealers and others to try to find ways to boost recall completion rates. The survey found 5 percent of respondents will not get recalls completed.

The polling firm tested three different types of vehicle recalls, ranging from minor to moderate to more serious recalls, and examined how consumers said they would respond to recalls at each level and how the recall impacts their perceptions about the safety of their vehicles.

"Nationwide, 93 percent of those who had heard about a safety recall on their vehicle learned about it from the automaker and new vehicle dealer communications," said Mitch Bainwol, president and CEO of the Auto Alliance. "Many consumers said they responded to the recall notice because they would rather be 'safe than sorry.' "

"We want everyone who gets a recall notice to take their vehicle to be repaired," said John Bozzella, president and CEO, Global Automakers. "Since little public opinion

research has been done in this area, for the first time we are learning about what motivates people to respond to safety recalls."

News Release from the Automotive Alliance

http://www.autoalliance.org/index.cfm?objectid=FADB8130-6D32-11E5-997E000C296BA163

New Survey Identifies Factors Influencing Recall Completion Rate

October 7, 2015

Washington, DC -- The Auto Alliance and Global Automakers today released the initial results of research designed to understand why roughly 25 percent of the owners of recalled vehicles never complete the free repair. An extensive survey conducted by Public Opinion Strategies illuminates a variety of factors that play into how consumers respond to recall notices and suggests potential opportunities for increasing consumer participation.

"Nationwide, 93 percent of those who had heard about a safety recall on their vehicle learned about it from the automaker and new vehicle dealer communications," said Mitch Bainwol, president and CEO of the Auto Alliance. "Many consumers said they responded to the recall notice because they would rather be 'safe than sorry.'"

"We want everyone who gets a recall notice to take their vehicle to be repaired," said John Bozzella, president and CEO, Global Automakers. "Since little public opinion research has been done in this area, for the first time we are learning about what motivates people to respond to safety recalls."

Several challenges to getting consumers to repair their recalled vehicles were identified. The research indicates that many consumers are doing their own risk assessments when they receive a

notice and deciding if the recall seems important enough for a response. Many survey respondents showed a reduced likelihood to repair a recalled vehicle if they perceived the recall to be "low" or "moderate" risk, saying it seemed to be "no big deal." Used vehicle owners are less likely to be motivated to respond to recall communications, even when they are aware of a recall on their vehicle.

The survey also indicated that many consumers may support state laws that only allow a vehicle's registration to be renewed if all safety recalls have been completed. Survey respondents supported several ways to help convince people to bring their vehicle into a dealership for the free recall repair, including ranking the severity of the recall as high, making the recall notice stand out while also denoting the repair is free, and providing a reminder of an "open" safety recall in their insurance renewal notices.

Public Opinion Strategies, one of the nation's leading public opinion research firms, conducted a national online survey of 1,500 motor vehicle owners, including those who reported receiving recall notices within the last two years, to explore reasons for consumer behavior related to the recalls (both responders and non-responders) through a series of closed and open-ended questions. The firm tested three different types of vehicle recalls, ranging from minor to moderate to more serious recalls, and examined how consumers said they would respond to recalls at each level and how the recall impacts their perceptions about the safety of their vehicles. Survey results provided descriptions of consumer sub-groups who respond and don't respond, and began identifying potentially effective ways to increase the participation rate of recalls. The survey results have been shared with the National Highway Traffic Safety Administration.

The national survey represents the first phase of research, and it is being followed by focus groups to learn more about non-responders and their views, as well as the experiences of new vehicle dealership employees who frequently interact with customers about recalls.

Crude export backers begin press for 60 Senate votes

By Kevin Rogers

With the support of 60 percent of its members, the House passed a bill to lift the decades-old ban on crude oil exports, and backers set their sights on hitting 60 again — this time, in the Senate.

The bill from Rep. Joe Barton, R-Texas, was approved on a mostly party-line vote of 261-152, with 26 Democrats supporting the legislation. Six Republicans voted against the

measure.

Following the vote, Barton told reporters the legislation's fate in the Senate is uncertain, and he isn't sure what form the final bill would take. He nonetheless expressed optimism that he and his Senate allies could win over six Democrats to the cause.

"We don't have six Democrats right now, but we're in hunting range of them," he said. "I think there's still a chance to do it in the Senate as a stand-alone bill."

Sen. Heidi Heitkamp, D-N.D., who is sponsoring a Senate bill to lift the ban, said she had begun the process of wrangling additional Democratic supporters. Sen. Joe Manchin, D-W.Va., is already a co-sponsor.

"Bipartisan support will help move our legislation forward, and over the past year, we have been meeting with senators to explain why lifting the ban makes so much sense," she said in a statement. "It's encouraging that others — especially Democratic senators — have recently expressed an interest and a willingness to craft a deal to address this outdated policy."

Some members of the Democratic caucus have said they could support lifting the crude export ban if it is coupled with provisions to support renewable energy. Heitkamp, however, was the sole Democrat who voted to favorably report her bill to the Senate floor at a Banking Committee hearing last week.

Her legislation, like Barton's, is a stand-alone bill to lift the ban. The Senate may also consider a package advanced by Senate Energy and Natural Resources Chairman Sen. Lisa Murkowski, R-Alaska, which includes more controversial provisions such as changes to energy revenue sharing programs and expanded offshore oil and gas drilling.

"House approval of legislation to lift the ban on crude oil exports is great news," Murkowski, who has also signed onto Heitkamp's bill, said in a statement. "It sends a strong signal that Congress will lead where the administration has failed."

Opponents of lifting the ban said the bill, even if it can get to the president's desk, is an exercise in futility, since there aren't enough votes to override the threatened presidential veto. The White House has said the legislation is "not needed."

"The Administration has made clear crude export legislation will be vetoed," Jay Hauck, executive director of Consumers and Refiners United for Domestic Energy said in a statement. "The proponents today failed to get 290 votes in the House. The bill is dead."

Barton said he would address the issue of a veto override once the bill made its way through the Senate.

"First we have to get the bill through the Senate. There's a lot to be done" he said. "We didn't get the veto override, but we got close enough to it, where we could be optimistic."

The oil industry representatives backing the bill cheered the House action, and voiced optimism that the Senate would answer the call.

"We are eager to see this bill taken up in the Senate, where members of two committees have already endorsed efforts to lift the 1970s-era ban on crude exports," American Petroleum Institute President and CEO Jack Gerard said in a statement. "The time to act is now."

Environmentalists slammed the bill as a giveaway to the oil industry, but took heart in the administration's opposition.

"Today's vote once again makes clear that the radical leadership of the U.S. House of Representatives is more concerned with lining the pockets of Big Oil than standing up for American families," said Sara Chieffo, vice president of government affairs for the League of Conservation Voters. "Thankfully, the Administration has already threatened to veto this destructive bill."

Court stays EPA water rule nationwide until challenges resolved

By Kevin Rogers

A federal appeals court in Ohio has ruled that a stay of the Environmental Protection Agency's Clean Water Rule must apply nationwide, delaying implementation of the regulation until the courts decide whether it is legal.

The 6th U.S. Circuit Court of Appeals, in a 2-1 decision, on Friday expanded the 13-state stay approved by a federal judge in North Dakota in August. That stay had been granted before the regulation took effect.

The appeals court said that the states challenging the rule didn't make a compelling case that the rule would cause "immediate irreparable harm." But it also said that delaying implementation of the rule wouldn't threaten "imminent injury" to the nation's waterways, and a full stay would allow more time to determine the legality of the rule, and limit confusion on how states should move forward.

"A stay allows for a more deliberate determination whether this exercise of executive power, enabled by Congress and explicated by the Supreme Court, is proper under the dictates of federal law," the court wrote. "A stay temporarily silences the whirlwind of confusion that springs from uncertainty about the requirements of the new rule and whether they will survive legal testing."

The states challenging the rule, which aims to clarify what bodies of water are subject to Clean Water Act protections, contend that it constitutes a federal overreach and would infringe on state water control.

EPA and the Army Corps of Engineers, however, said it would only expand the federal government's jurisdiction by 3 percent and only applies to bodies of water that can carry pollution downstream.

EPA spokeswoman Melissa Harrison said the agency was ready to defend the rule in court and get it implemented.

"The agencies respect the court's decision to allow for more deliberate consideration of the issues in the case and we look forward to litigating the merits of the Clean Water Rule," she said in a statement.

"The Clean Water Rule was developed by the agencies to respond to an urgent need to improve and simplify the process for identifying waters that are and are not protected under the Clean Water Act, and is based on the latest science and the law," she said.

West Virginia Attorney General Patrick Morrisey, whose state joined the suit to block the rule, said the regulation wouldn't survive in court.

"This decision is a critical victory in our fight against this onerous federal overreach," he said in a statement. "We have said from the beginning that this new rule does not pass legal muster."

EPA's detractors in Congress also cheered the decision, but derided the agency for finalizing what they believe to be an illegal rule.

"It is sad that we need the courts to tell the Obama Administration to rethink this issue and do the right thing," said House Natural Resources Chairman Rep. Rob Bishop, R-Utah. "Why can't the agencies just work with Congress to do the right thing the first time?"

Equipment malfunction causes explosion at

Washington dam

By Nicholas K. Geranios

SPOKANE, Wash. (AP) — An electrical equipment malfunction caused an explosion at a hydroelectric dam on Washington's Columbia River that injured six workers, utility officials said Friday.

The explosion occurred Thursday afternoon at one of 10 electricity generating units at the Priest Rapids Dam near the central Washington city of Mattawa, Grant County Public Utility District spokesman Chuck Allen said.

"There was no structural damage to the facility and no resulting threats to public safety related to this incident," he said. "The dam is being operated safely at this time."

Five workers were being treated at Harborview Medical Center in Seattle. Two men, both in their 40s, are in critical condition and in the intensive care unit, while three men are in satisfactory condition, spokesman Susan Gregg said Friday. All were being treated for burns.

Judge gives final approval for $338M oil train settlement

By David Sharp

PORTLAND, Maine (AP) — A U.S. bankruptcy judge on Friday approved a $338 million settlement fund for victims of the fiery 2013 oil train derailment that claimed 47 lives in Quebec, clearing the way for payments to victims by year's end.

Judge Peter Cary announced his approval after Canadian Pacific dropped its objection to the settlement plan and after a Canadian judge gave conditional approval Thursday. He praised attorneys for working together to get a substantial settlement in place as quickly as possible.

Barring any surprises, payments could be made to victims by the end of November or by year's end at the latest, said Robert Keach, the U.S. bankruptcy trustee. About $83 million, or about $110 million in Canadian dollars, is being set aside to settle wrongful death claims.

"We don't pretend to suggest that we made up for everything that happened. But within the limits of the civil system, this is substantial compensation for the victims and they deserve it," Keach said.

Officials: Broken rail caused West Virginia train derailment

By John Raby

MONTGOMERY, W.Va. (AP) — A fiery oil train derailment in southern West Virginia last February resulted from a broken rail that started with a crack that should have been detected but was missed in two inspections, federal investigators said Friday.

A CSX train was carrying 3 million gallons of Bakken crude when it derailed Feb. 16 during a snowstorm in Mount Carbon. Twenty-seven of the train's 109 cars derailed. Twenty cars leaked crude oil.

The Federal Railroad Administration said the broken rail resulted from a crack that had expanded. The problem was missed by CSX Corp. and a contractor on inspections in December 2014 and last January, said Sarah Feinberg, the FRA's acting chief.

"This accident, like many rail accidents, was preventable," Feinberg said at a news conference.

Petition drive assures House vote to revive Ex-Im Bank

By Andrew Taylor

WASHINGTON (AP) — Several dozen Republicans teamed up with Democrats Friday to assure a House vote on reviving the U.S. Export-Import Bank, giving the effort to save the bank new life more than three months after its charter lapsed.

The development came as bank supporters got a majority of the House to sign a petition to dislodge a measure to revive it from a powerful panel controlled by a bank opponent. The bank helps finance sales of U.S. exports to foreign customers.

The bank's charter expired June 30, and it has been unable to approve new applications to help overseas buyers get financing to purchase U.S. products like airplanes and heavy equipment. Supporters say the bank helps sustain tens of thousands of manufacturing jobs.

Bank supporters have been stymied by opposition from tea party Republicans, House Financial Services Committee Chairman Jeb Hensarling, R-Texas, and top GOP leaders like Majority Leader Kevin McCarthy, R-Calif.

Senator asks EPA to stop Montreal sewage-dumping plan

By Mary Esch

ALBANY, N.Y. (AP) — Sen. Charles Schumer asked U.S. environmental regulators Friday to work with Canadian officials to stop the city of Montreal from dumping 2 billion gallons of raw sewage into the St. Lawrence River.

Montreal Mayor Denis Coderre said the weeklong sewage dumping would start Oct. 18 and is necessary as the city rebuilds a riverside expressway. The sewage will head away from New York, but it has drawn condemnation from U.S. officials.

Schumer urged the U.S. Environmental Protection Agency to work with the Canadian government and the State Department to devise an alternative plan.

"If this plan is allowed to move forward, this sewage could severely impact the river ecosystem and wildlife, and the St. Lawrence County tourism industry on which the North Country depends," Schumer said.

More

Judge denies environmentalists' intervention in Exxon case

By Michael Catalini

TRENTON, N.J. (AP) — A Democratic state senator and environmental groups cannot intervene in the state's $225 million settlement with Exxon Mobil over contaminated gas stations and other sites, a New Jersey judge ruled Friday.

Superior Court Judge Michael Hogan said Friday he denied the request from state Sen. Raymond Lesniak and the four groups because they did not have standing to bring the lawsuit in the first place. It's the second time Hogan has denied their petition in a case that

stretches back to 2004.

The groups — Clean Water Action, Delaware Riverkeeper, Environment New Jersey and New Jersey Sierra Club — plan further appeals.

"Judge Hogan was wrong," New Jersey Sierra Club director Jeff Tittel said. "He went along with the Christie administration's sell-out for less than one penny on the dollar for billions of dollars in damages." Lesniak also plans to appeal, saying "this miscarriage of justice will not stand."

More

VW may compensate owners of diesel cars for loss of value

By Tom Krisher

DETROIT (AP) — Volkswagen could compensate owners of diesel-powered cars that emit high levels of pollutants, possibly by paying them for the lost value of their vehicles, the company's top U.S. executive said.

Speaking to lawmakers investigating the emissions cheating, U.S. CEO Michael Horn also said fixing most of the 500,000 affected cars in the U.S. could take one to two years, possibly more. The fix, he said, would not hurt fuel mileage, but it could hinder the cars' performance, knocking one or two miles-per-hour off the top speed.

"There might be a slight impact on performance," Horn said Thursday to a subcommittee of the House Energy and Commerce Committee.

Horn told the committee that VW hasn't calculated how much value the scandal has cost owners of the affected cars. But earlier this week Kelley Blue Book said the value of VWs with 2-liter diesel engines had fallen 13 percent since mid-September. Used car values often drop in the fall, but the VW diesel drop was unusually large.

In rare event, remnants of Pacific hurricane hit Alaska

By Becky Bohrer

JUNEAU, Alaska (AP) — Remnants of Pacific Hurricane Oho battered Alaska's southeast coast on Friday, the latest unusual weather event to hit a state that so far this year has dealt with a lack of snow, warmer temperatures and intense wildfires.

The storm on Thursday brought more than 7 inches of rain to Ketchikan, a scenic town in Alaska's coastal rainforest. Gusts of up to 80 mph were forecast for Friday, and more rain was expected across the region. Jon Dorman, deputy emergency manager for the city of Ketchikan, said Friday morning that creeks were swollen and residents were keeping an eye on the storm, but no other major issues had been reported.

The remnants of Oho were picked up by a larger low-pressure system. Oho was among a record number of tropical cyclones in the central Pacific so far this hurricane season, which officials attributed to unusually warm ocean temperatures from El Nino.

While it's not unusual for Alaska to feel the remnant effects of tropical storms from the west, it's rare for the remnants of a central Pacific tropical storm to reach this far because tropical systems north of Hawaii often fall apart rapidly as they reach cooler water temperatures, said meteorologist Shaun Baines of the weather service's Anchorage office.

Crude export backers begin press for 60 Senate votes

By Kevin Rogers

With the support of 60 percent of its members, the House passed a bill to lift the decades-old ban on crude oil exports, and backers set their sights on hitting 60 again – this time, in the Senate.

The bill from Rep. Joe Barton, R-Texas, was approved on a mostly party-line vote of 261-152, with 26 Democrats supporting the legislation. Six Republicans voted against the

measure.

Following the vote, Barton told reporters the legislation's fate in the Senate is uncertain, and he isn't sure what form the final bill would take. He nonetheless expressed optimism that he and his Senate allies could win over six Democrats to the cause.

"We don't have six Democrats right now, but we're in hunting range of them," he said. "I think there's still a chance to do it in the Senate as a stand-alone bill."

Sen. Heidi Heitkamp, D-N.D., who is sponsoring a Senate bill to lift the ban, said she had begun the process of wrangling additional Democratic supporters. Sen. Joe Manchin, D-W.Va., is already a co-sponsor.

"Bipartisan support will help move our legislation forward, and over the past year, we have been meeting with senators to explain why lifting the ban makes so much sense," she said in a statement. "It's encouraging that others — especially Democratic senators — have recently expressed an interest and a willingness to craft a deal to address this outdated policy."

Some members of the Democratic caucus have said they could support lifting the crude export ban if it is coupled with provisions to support renewable energy. Heitkamp, however, was the sole Democrat who voted to favorably report her bill to the Senate floor at a Banking Committee hearing last week.

Her legislation, like Barton's, is a stand-alone bill to lift the ban. The Senate may also consider a package advanced by Senate Energy and Natural Resources Chairman Sen. Lisa Murkowski, R-Alaska, which includes more controversial provisions such as changes to energy revenue sharing programs and expanded offshore oil and gas drilling.

"House approval of legislation to lift the ban on crude oil exports is great news," Murkowski, who has also signed onto Heitkamp's bill, said in a statement. "It sends a strong signal that Congress will lead where the administration has failed."

Opponents of lifting the ban said the bill, even if it can get to the president's desk, is an exercise in futility, since there aren't enough votes to override the threatened presidential veto. The White House has said the legislation is "not needed."

"The Administration has made clear crude export legislation will be vetoed," Jay Hauck, executive director of Consumers and Refiners United for Domestic Energy said in a statement. "The proponents today failed to get 290 votes in the House. The bill is dead."

Barton said he would address the issue of a veto override once the bill made its way through the Senate.

"First we have to get the bill through the Senate. There's a lot to be done" he said. "We didn't get the veto override, but we got close enough to it, where we could be optimistic."

The oil industry representatives backing the bill cheered the House action, and voiced optimism that the Senate would answer the call.

"We are eager to see this bill taken up in the Senate, where members of two committees have already endorsed efforts to lift the 1970s-era ban on crude exports," American Petroleum Institute President and CEO Jack Gerard said in a statement. "The time to act is now."

Environmentalists slammed the bill as a giveaway to the oil industry, but took heart in the administration's opposition.

"Today's vote once again makes clear that the radical leadership of the U.S. House of Representatives is more concerned with lining the pockets of Big Oil than standing up for American families," said Sara Chieffo, vice president of government affairs for the League of Conservation Voters. "Thankfully, the Administration has already threatened to veto this destructive bill."

Court stays EPA water rule nationwide until challenges resolved

By Kevin Rogers

A federal appeals court in Ohio has ruled that a stay of the Environmental Protection Agency's Clean Water Rule must apply nationwide, delaying implementation of the regulation until the courts decide whether it is legal.

The 6th U.S. Circuit Court of Appeals, in a 2-1 decision, on Friday expanded the 13-state stay approved by a federal judge in North Dakota in August. That stay had been granted before the regulation took effect.

The appeals court said that the states challenging the rule didn't make a compelling case that the rule would cause "immediate irreparable harm." But it also said that delaying implementation of the rule wouldn't threaten "imminent injury" to the nation's waterways, and a full stay would allow more time to determine the legality of the rule, and limit confusion on how states should move forward.

"A stay allows for a more deliberate determination whether this exercise of executive power, enabled by Congress and explicated by the Supreme Court, is proper under the dictates of federal law," the court wrote. "A stay temporarily silences the whirlwind of confusion that springs from uncertainty about the requirements of the new rule and whether they will survive legal testing."

The states challenging the rule, which aims to clarify what bodies of water are subject to Clean Water Act protections, contend that it constitutes a federal overreach and would infringe on state water control.

EPA and the Army Corps of Engineers, however, said it would only expand the federal government's jurisdiction by 3 percent and only applies to bodies of water that can carry pollution downstream.

EPA spokeswoman Melissa Harrison said the agency was ready to defend the rule in court and get it implemented.

"The agencies respect the court's decision to allow for more deliberate consideration of the issues in the case and we look forward to litigating the merits of the Clean Water Rule," she said in a statement.

"The Clean Water Rule was developed by the agencies to respond to an urgent need to improve and simplify the process for identifying waters that are and are not protected under the Clean Water Act, and is based on the latest science and the law," she said.

West Virginia Attorney General Patrick Morrisey, whose state joined the suit to block the rule, said the regulation wouldn't survive in court.

"This decision is a critical victory in our fight against this onerous federal overreach," he said in a statement. "We have said from the beginning that this new rule does not pass legal muster."

EPA's detractors in Congress also cheered the decision, but derided the agency for finalizing what they believe to be an illegal rule.

"It is sad that we need the courts to tell the Obama Administration to rethink this issue and do the right thing," said House Natural Resources Chairman Rep. Rob Bishop, R-Utah. "Why can't the agencies just work with Congress to do the right thing the first time?"

Equipment malfunction causes explosion at

Washington dam

By Nicholas K. Geranios

SPOKANE, Wash. (AP) — An electrical equipment malfunction caused an explosion at a hydroelectric dam on Washington's Columbia River that injured six workers, utility officials said Friday.

The explosion occurred Thursday afternoon at one of 10 electricity generating units at the Priest Rapids Dam near the central Washington city of Mattawa, Grant County Public Utility District spokesman Chuck Allen said.

"There was no structural damage to the facility and no resulting threats to public safety related to this incident," he said. "The dam is being operated safely at this time."

Five workers were being treated at Harborview Medical Center in Seattle. Two men, both in their 40s, are in critical condition and in the intensive care unit, while three men are in satisfactory condition, spokesman Susan Gregg said Friday. All were being treated for burns.

Judge gives final approval for $338M oil train settlement

By David Sharp

PORTLAND, Maine (AP) — A U.S. bankruptcy judge on Friday approved a $338 million settlement fund for victims of the fiery 2013 oil train derailment that claimed 47 lives in Quebec, clearing the way for payments to victims by year's end.

Judge Peter Cary announced his approval after Canadian Pacific dropped its objection to the settlement plan and after a Canadian judge gave conditional approval Thursday. He praised attorneys for working together to get a substantial settlement in place as quickly as possible.

Barring any surprises, payments could be made to victims by the end of November or by year's end at the latest, said Robert Keach, the U.S. bankruptcy trustee. About $83 million, or about $110 million in Canadian dollars, is being set aside to settle wrongful death claims.

"We don't pretend to suggest that we made up for everything that happened. But within the limits of the civil system, this is substantial compensation for the victims and they deserve it," Keach said.

Officials: Broken rail caused West Virginia train derailment

By John Raby

MONTGOMERY, W.Va. (AP) — A fiery oil train derailment in southern West Virginia last February resulted from a broken rail that started with a crack that should have been detected but was missed in two inspections, federal investigators said Friday.

A CSX train was carrying 3 million gallons of Bakken crude when it derailed Feb. 16 during a snowstorm in Mount Carbon. Twenty-seven of the train's 109 cars derailed. Twenty cars leaked crude oil.

The Federal Railroad Administration said the broken rail resulted from a crack that had expanded. The problem was missed by CSX Corp. and a contractor on inspections in December 2014 and last January, said Sarah Feinberg, the FRA's acting chief.

"This accident, like many rail accidents, was preventable," Feinberg said at a news conference.

Petition drive assures House vote to revive Ex-Im Bank

By Andrew Taylor

WASHINGTON (AP) — Several dozen Republicans teamed up with Democrats Friday to assure a House vote on reviving the U.S. Export-Import Bank, giving the effort to save the bank new life more than three months after its charter lapsed.

The development came as bank supporters got a majority of the House to sign a petition to dislodge a measure to revive it from a powerful panel controlled by a bank opponent. The bank helps finance sales of U.S. exports to foreign customers.

The bank's charter expired June 30, and it has been unable to approve new applications to help overseas buyers get financing to purchase U.S. products like airplanes and heavy equipment. Supporters say the bank helps sustain tens of thousands of manufacturing jobs.

Bank supporters have been stymied by opposition from tea party Republicans, House Financial Services Committee Chairman Jeb Hensarling, R-Texas, and top GOP leaders like Majority Leader Kevin McCarthy, R-Calif.

Senator asks EPA to stop Montreal sewage-dumping plan

By Mary Esch

ALBANY, N.Y. (AP) — Sen. Charles Schumer asked U.S. environmental regulators Friday to work with Canadian officials to stop the city of Montreal from dumping 2 billion gallons of raw sewage into the St. Lawrence River.

Montreal Mayor Denis Coderre said the weeklong sewage dumping would start Oct. 18 and is necessary as the city rebuilds a riverside expressway. The sewage will head away from New York, but it has drawn condemnation from U.S. officials.

Schumer urged the U.S. Environmental Protection Agency to work with the Canadian government and the State Department to devise an alternative plan.

"If this plan is allowed to move forward, this sewage could severely impact the river ecosystem and wildlife, and the St. Lawrence County tourism industry on which the North Country depends," Schumer said.

Judge denies environmentalists' intervention in Exxon case

By Michael Catalini

TRENTON, N.J. (AP) — A Democratic state senator and environmental groups cannot intervene in the state's $225 million settlement with Exxon Mobil over contaminated gas stations and other sites, a New Jersey judge ruled Friday.

Superior Court Judge Michael Hogan said Friday he denied the request from state Sen. Raymond Lesniak and the four groups because they did not have standing to bring the lawsuit in the first place. It's the second time Hogan has denied their petition in a case that

stretches back to 2004.

The groups — Clean Water Action, Delaware Riverkeeper, Environment New Jersey and New Jersey Sierra Club — plan further appeals.

"Judge Hogan was wrong," New Jersey Sierra Club director Jeff Tittel said. "He went along with the Christie administration's sell-out for less than one penny on the dollar for billions of dollars in damages." Lesniak also plans to appeal, saying "this miscarriage of justice will not stand."

More

VW may compensate owners of diesel cars for loss of value

By Tom Krisher

DETROIT (AP) — Volkswagen could compensate owners of diesel-powered cars that emit high levels of pollutants, possibly by paying them for the lost value of their vehicles, the company's top U.S. executive said.

Speaking to lawmakers investigating the emissions cheating, U.S. CEO Michael Horn also said fixing most of the 500,000 affected cars in the U.S. could take one to two years, possibly more. The fix, he said, would not hurt fuel mileage, but it could hinder the cars' performance, knocking one or two miles-per-hour off the top speed.

"There might be a slight impact on performance," Horn said Thursday to a subcommittee of the House Energy and Commerce Committee.

Horn told the committee that VW hasn't calculated how much value the scandal has cost owners of the affected cars. But earlier this week Kelley Blue Book said the value of VWs with 2-liter diesel engines had fallen 13 percent since mid-September. Used car values often drop in the fall, but the VW diesel drop was unusually large.

In rare event, remnants of Pacific hurricane hit Alaska

By Becky Bohrer

JUNEAU, Alaska (AP) — Remnants of Pacific Hurricane Oho battered Alaska's southeast coast on Friday, the latest unusual weather event to hit a state that so far this year has dealt with a lack of snow, warmer temperatures and intense wildfires.

The storm on Thursday brought more than 7 inches of rain to Ketchikan, a scenic town in Alaska's coastal rainforest. Gusts of up to 80 mph were forecast for Friday, and more rain was expected across the region. Jon Dorman, deputy emergency manager for the city of Ketchikan, said Friday morning that creeks were swollen and residents were keeping an eye on the storm, but no other major issues had been reported.

The remnants of Oho were picked up by a larger low-pressure system. Oho was among a record number of tropical cyclones in the central Pacific so far this hurricane season, which officials attributed to unusually warm ocean temperatures from El Nino.

While it's not unusual for Alaska to feel the remnant effects of tropical storms from the west, it's rare for the remnants of a central Pacific tropical storm to reach this far because tropical systems north of Hawaii often fall apart rapidly as they reach cooler water temperatures, said meteorologist Shaun Baines of the weather service's Anchorage office.

CLERK US DISTRICT COURT
ALEXANDRIA, VIRGINIA

IN THE UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF VIRGINIA
Alexandria Division

MARIA BOURN, DAVID WATSON, STEPHEN VERNER, and MARK SCHUMACHER, on behalf of themselves and all others similarly situated,

Plaintiffs,

v.

VOLKSWAGEN AG, VOLKSWAGEN OF AMERICA GROUP, INC., VOLKSWAGEN OF AMERICA, INC., AUDI OF AMERICA, LLC, and AUDI AG,

Defendants.

Case No. 1:15cv1295

JURY TRIAL DEMANDED

LOG/MSN

CLASS ACTION COMPLAINT

Plaintiffs Maria Bourn, David Watson, Steven Verner, and Mark Schumacher bring this action on their own behalf and on behalf of a class of similarly situated persons against Volkswagen AG ("VWAG"), Volkswagen of America Group, Inc. and Volkswagen of America, Inc. (collectively, "VWoA"), and Audi of America, LLC and Audi AG (collectively, "Audi").[1] Plaintiffs seek injunctive relief and to recover damages caused by Volkswagen's violations of Section 2 of the Sherman Antitrust Act (15 U.S.C. § 2), the Racketeer Influenced and Corrupt Organizations Act ("RICO") (18 U.S.C. § 1961 *et seq.*), the Magnuson-Moss Warranty Act (15 U.S.C. § 2301 *et seq.*), the common law of fraud and unjust enrichment. and the statutory laws of California and Virginia. Plaintiffs make the following allegations upon information and belief,

[1] Unless otherwise indicated herein, all of these defendants will be referred to collectively as "Volkswagen."

VW FOIA, EPA 06/20/2017 2017-FFP_030977

except as to those allegations pertaining to the named plaintiffs, which are made on personal knowledge.

I. NATURE OF THE ACTION.

1. Four years ago, Martin Winterkorn ("Winterkorn"), Volkswagen's former Chief Executive Officer ("CEO"), announced Volkswagen's goal to become the world's largest automaker. "By 2018," he told U.S. politicians gathered for the opening of a Volkswagen plant in Chattanooga, Tennessee, "we want to take our group to the very top of the global car industry."[2] With only a relatively small share of the gigantic United States market, Winterkorn's ambitious plan required a dramatic increase in sales in that market. And the way to increase sales here, Volkswagen decided, was to convince American consumers that its diesel-powered cars were a superior alternative, with better fuel efficiency, lower emissions, and uncompromised performance.

2. Between 2009 and September 18, 2015, Volkswagen aggressively marketed its so-called Clean Diesel Turbocharged Direct Injection ("TDI") light passenger vehicles in the United States, spending millions of dollars on print, television, internet and point-of-sale advertising aimed at convincing American consumers that its cars were environmentally-friendly, fuel-efficient, powerful, and reasonably priced. In order to increase its market share, Volkswagen's cars needed all those attributes to win over a skeptical American public. Compared with Europe, with its higher fuel costs, expensive cars and less stringent tailpipe emission standards, the United States market was a tough sell for diesel-powered passenger cars.

3. Until September 18, 2015, it looked as if Winterkorn's ambitious plan had succeeded. In July of 2015, Volkswagen surpassed Toyota Corporation ("Toyota") as the world's largest automaker, selling 5.04 million vehicles in the first six months of this year, compared to

[2] http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

VW FOIA, EPA 06/20/2017 2017-FFP_030978

Toyota's 5.02 million.[3]

4. As noted above, the United States was a key part of this global strategy. As reported in *Automotive News*:

> Back in 2007, the automaker vowed to crank up U.S. sales of its VW brand to 800,000 vehicles a year by 2018. It was a dizzying sum, requiring more than a tripling of its volume at that time. Many in the industry scoffed.
>
> But with steady precision, VW got the skeptics to take a second look. It launched a lower-priced, Mexico-made Jetta and built a plant in Chattanooga that began churning out a new Passat that better fit American tastes and budgets. VW sales doubled between 2009 and 2012, to nearly 440,000, lifting hopes that 800,000 was doable.[4]

By October 1, 2015, VWoA had reported sales of 264, 215 passenger vehicles in the United States through September 15, indicating that before the scandal that is the subject of this Complaint surfaced, it was expecting another excellent sales year.[5]

5. Unfortunately for American consumers, Volkswagen's success in capturing market share was based on a lie. On September 18, 2015, the United States Environmental Protection Agency ("EPA") and the California Air Resources Board ("CARB") both notified Volkswagen that it had violated federal and state laws and regulations by using a "defeat device"--software specifically intended to circumvent emission test procedures established by the EPA and by CARB. Those notices are attached as Exhibits 1 and 2 to this complaint.

6. Volkswagen's "defeat device" is a "sophisticated software algorithm"[6] that detects

---

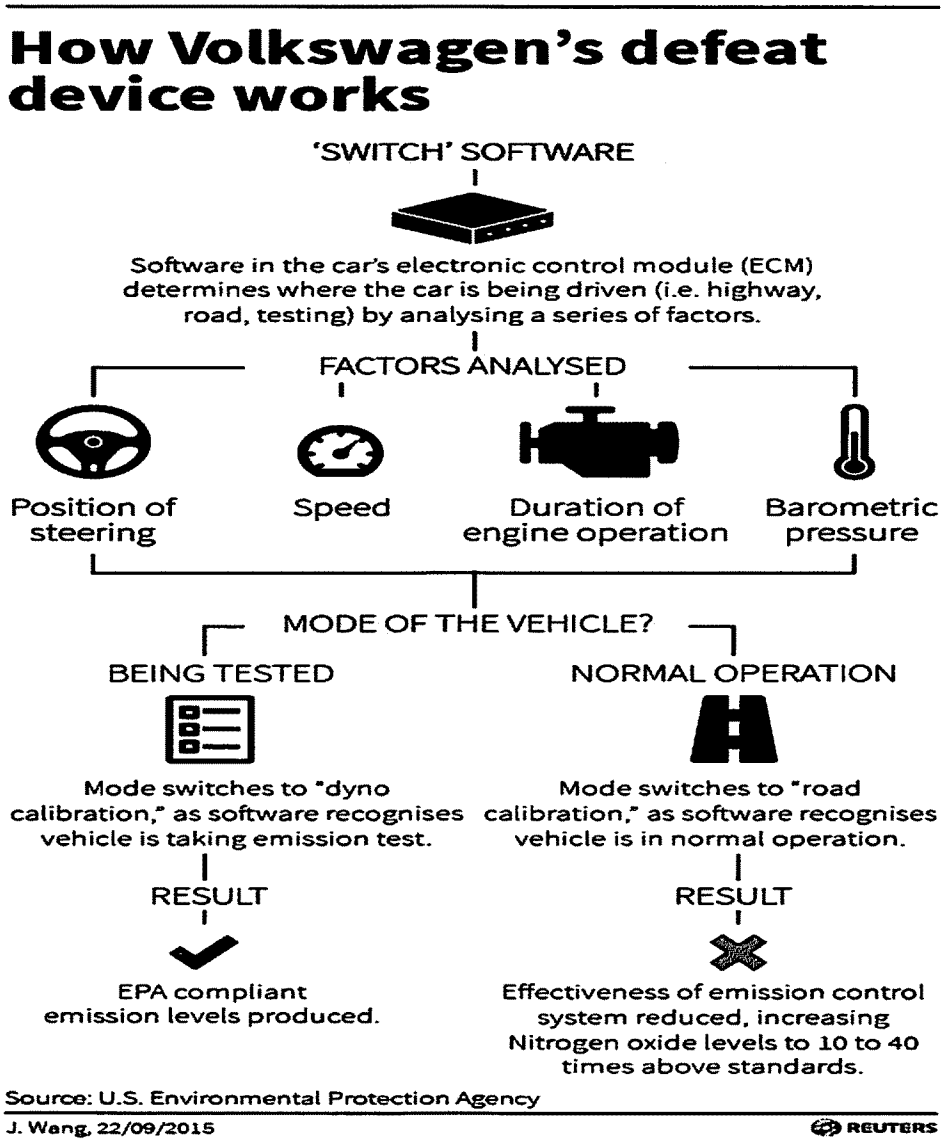
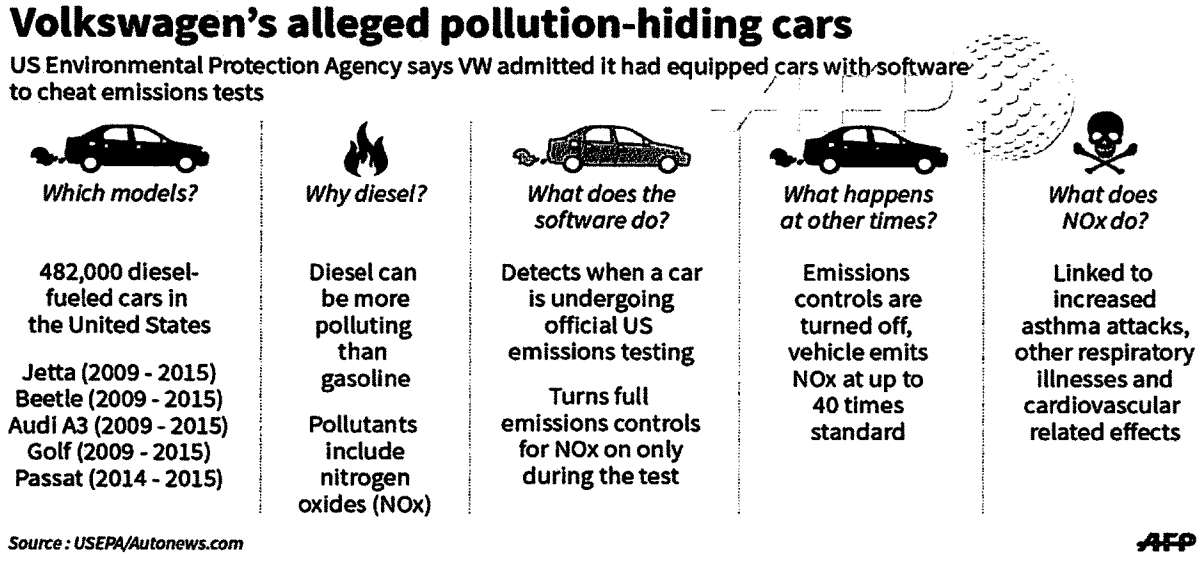
VW FOIA, EPA 06/20/2017 2017-FFP_030979

when the car is undergoing emissions testing. Under such laboratory test conditions, Volkswagen's vehicles pass the EPA and CARB emissions tests with flying colors. Under normal driving situations, however, the software algorithm ***turns off*** the emissions control systems, allowing the cars to spew as much as 40 times the allowable amount of pollutants--specifically nitrogen oxides ("NOx")--into the air. Elevated NOx contributes to the creation of ozone and smog, and is linked to asthma attacks, other respiratory diseases such as emphysema and bronchitis, and causes premature death. A diagram published in Reuters depicts its operation:



7. The chart below, published by *Agence France Press*, provides a useful and concise primer on the known facts:



8. As noted below, dozens of fatalities in the United States over the last seven years have been attributed to the illegal use of this "defeat device." The scandal has been popularly referred to as "Dieselgate."

9. Volkswagen has admitted to installing these "defeat devices" in 11 million diesel vehicles that have been sold around the world, including the 482,000 in the United States. As Michael Horn ("Horn"), the President and CEO of VWoA, candidly admitted: "[l]et's be clear about this. **Our company was dishonest. With the EPA, and the California Air Resources Board, and with all of you. And in my German words, we have totally screwed up.**"[7] (Emphases added). Horn further stated in a video on VWAG's website that **"[o]ur company**

[7] http://www.roadandtrack.com/new-cars/car-technology/news/a26774/volkswagen-ceo-we-screwed-up/. A YouTube video of this extraordinary concession can be found here: www.youtube.com/watch?v=Q6z8uUJE-jE.

betrayed the trust of you, our customers, our employees, our dealers and the public."[8] (Emphases added). And as VWAG has posted on its website: "[g]overnment regulations limit the use of engine software that reduces the effectiveness of a vehicle's emissions control systems. **Those are the 'defeat device' regulations, and regrettably, VW violated those regulations. We take full responsibility** – and deeply regret that this happened."[9] (Emphases added). In a September 23, 2015 press release available on VWAG's website, the Executive Committee of VWAG's Supervisory Board ("Board") stated: "[t]he Executive Committee takes this matter extremely seriously. **The Executive Committee recognizes not only the economic damage caused, but also the loss of trust among many customers worldwide.**"[10] (Emphases added). Or, as Berthold Huber ("Huber"), Deputy Chairman of the Board, was quoted as saying in a September 25 press release, **"[t]he test manipulations are a moral and political disaster for Volkswagen. The unlawful behavior of engineers and technicians involved in engine development shocked Volkswagen just as much as it shocked the public."** [11] (Emphases added).

10. In light of the scandal, VWAG's Board forced Winterkorn to resign as CEO of VWAG on September 23.[12] In doing so, he stated that "**I accept responsibility for the irregularities that have been found in diesel engines.**" (Emphases added). [13] He further observed

[12] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html

[13] http://www.nytimes.com/2015/09/24/business/international/volkswagen-chief-martin-winterkorn-resigns-amid-emissions-scandal.html. Notably, however, Winterkorn plans to stay as the Chairman of the Board of Directors of Porsche Automobil Holding SE, which owns a 52% controlling stake in VWAG; he is also still demanding payment of the ten million Euros owed to him under his employment contract, which does not expire until 2016.

that "**[m]illions of people across the world trust our brands, our cars and our technologies. I am endlessly sorry that we have disappointed this trust. I apologize in every way to our customers, to authorities and the whole public for the wrongdoing.**"[14] (Emphases added). He professed surprise that "**misconduct on such a scale**" (emphases added) occurred within the Volkswagen group, suggesting that he had no knowledge of it.[15] It has been reported that Winterkorn was being investigated for fraud in connection with the conduct at issue here by prosecutors in Lower Saxony; however, more recently, those prosecutors have stated that any prosecution will await further factual information.[16]

11. Volkswagen has ordered its authorized dealers ("Volkswagen Authorized Dealers") to cease selling the vehicles in which the defeat devices are installed. These include at least the VW Jetta TDI (Model Years 2009-15), the VW Jetta SportWagen TDI (Model Years 2009-14), the VW Golf TDI (Model Years 2010-15), the VW Golf SportWagen TDI (Model Year 2015), the VW Beetle TDI and VW Beetle Convertible TDI (Model Years 2012-15), the VW Passat TDI (Model Years 2012-15) and the Audi A3 TDI (Model Years 2010-15).[17] These affected vehicles will be referred to in this Complaint as the "Class Vehicles."

12. Volkswagen's internal investigation has resulted so far in the suspension of three

executives: (a) Heinz-Jakob Neusser ("Neusser"); (b) Ulrich Hackenberg ("Hackenberg"); and (c) Wolfgang Hatz ("Hatz").[18] Spiegel Online described Hackenberg's departure, which was also typical of the others: "[h]e received news of his immediate suspension from the personnel department and was asked to turn in his company phone and leave his office. He has also been told not to set foot on company premises."[19]

13. None of these people are mere obscure midlevel engineers. Hackenberg is a VWAG Board member for Technical Development.[20] The same Spiegel Online article described Hackenberg as "a long-time confidant of Winterkorn and, up until just a few days ago, one of the most powerful men at VW." Hatz is a Porsche AG ("Porsche") Board of Management member in charge of Research and Development and is additionally Head of Engines and Transmissions Development for the Volkswagen Group.[21] Neusser was responsible for engine development at Porsche commencing in 1998 and drivetrain development commencing in 2011; in October of 2012, he succeeded Hatz as Head of Powertrain Development at the Volkswagen Group.[22]

14. The same Spiegel Online article notes that Hans-Dieter Pötsch ("Pötsch"), the VWAG Finance Chief and Board Chairman of VWAG, may also be under investigation by regulatory authorities. As discussed below, Volkswagen told the EPA about the use of a defeat device on September 3, but disclosed it publicly only on September 20. "[T]he finance chief

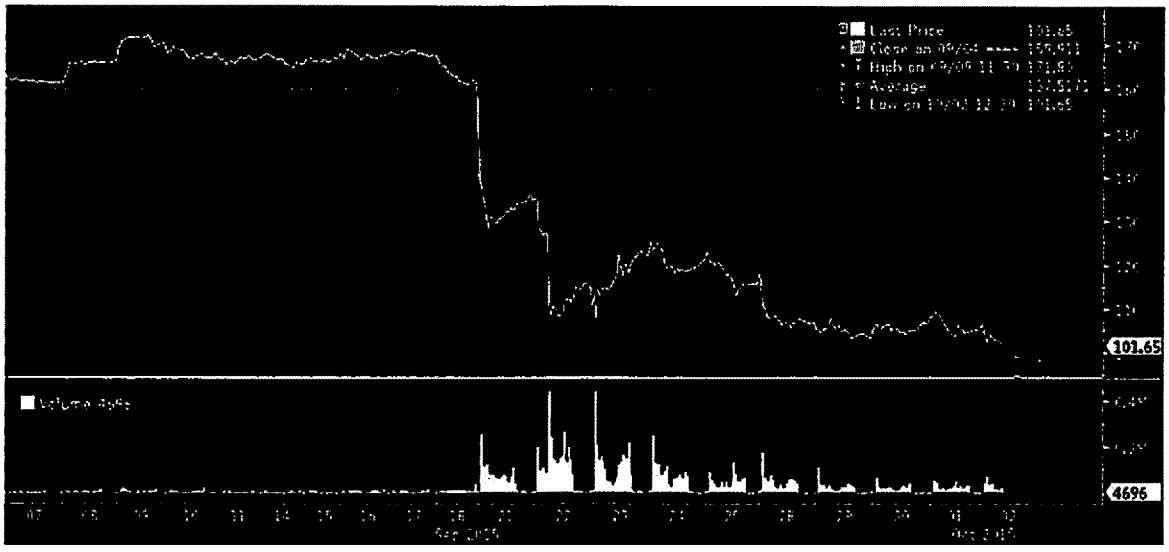
[22] http://www.volkswagenag.com/content/vwcorp/info_center/en/news/2012/09/Dr_Heinz_Jakob_Neusser.html.

remained silent for 17 days. During these 17 days, hundreds of thousands of investors bought VW stock. When the scandal was finally made public on Sept. 20, the price of VW shares plunged by 40 percent, costing stockholders €35 billion."[23] VWAG's shares have been on a steady decline ever since, as reflected in this graphic from the *Telegraph* in the United Kingdom:



15. According to an October 3 article from Reuters, "[a]t an internal company meeting this week at the VW headquarters in Wolfsburg, Pötsch described the situation as an 'existence-threatening crisis for the company', Germany's Welt am Sonntag reported in a release ahead of Sunday's publication."[24]

[23] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html.

[24] http://mobile.reuters.com/article/idUSKCN0RX0GQ20151004. Pötsch's accession to the VWAG Board has been criticized. Hans-Christoph Hirt, a director of Hermes Equity Ownership Services, an adviser to pension fund investors in companies including Volkswagen, said the appointment created a "serious conflict of interest": "[Pötsch] was a key VW executive for more than a decade and under German law the management board has a collective responsibility . . . The lawyers will surely demand that he recuse himself from any supervisory board meetings when management's role is discussed."

16. As explained below, and contrary to the suggestions of some of Volkswagen's spokespersons, the unlawful conduct here was not the action of renegade lower-level employees. It was instead the product of a concerted scheme by top executives at Volkswagen to save costs through use of the TDI technology, break into the United States diesel passenger car market by concealing from regulators and the public the inability of cars using that technology to meet federal and state emissions standards, market the TDI cars through an elaborate seven-year long campaign of false advertising and lying to state and federal officials, and thereby obtain a monopoly share of the United States Clean Diesel passenger car market.

17. The German periodical *Bild am Sonntag* revealed that Robert Bosch GmbH ("Bosch"), the supplier of some components of the emissions control system, used by Volkswagen in TDI diesel vehicles, also supplied Volkswagen with diesel software for test purposes. Bosch reportedly told VWAG in 2007 that using that software in vehicles on the road would be illegal.[25] Similarly, *Süddeutsche Zeitung* has reported that Neusser had ignored least one Volkswagen engineer's warnings over "possibly illegal" practices in 2011.[26] Spiegel Online reported that groups within Volkswagen knew of potential issues as far back as 2005 or 2006.[27] Olaf Lies, a VWAG Board member, has stated publicly that **"[t]hose people who allowed this to happen, or who made the decision to install this software--they acted criminally. They must take personal responsibility**."[28] (Emphases added).

VW FOIA, EPA 06/20/2017 2017-FFP_030986

18. As discussed in further detail below, Volkswagen has set aside the inadequate sum of 6.5 billion Euros (approximately $7.2 billion) to deal with the fallout from this fraud. Numerous countries across the world are investigating the matter and here, in the United States, probes are being conducted by the United States Department of Justice ("DOJ"), a coalition of state attorneys general ("AGs"), and members of the United States House of Representatives. The EPA has ordered a recall.

II. THE PARTIES.

A. Plaintiffs.

19. Plaintiffs Maria Bourn ("Bourn") and David Watson ("Watson") are residents of South San Francisco, California. Bourn is a lawyer in San Francisco. Watson is a teacher. In 2015, Bourn and Watson, who are married, purchased a certified, pre-owned 2010 Model Year Jetta SportsWagen from Stevens Creek Volkswagen in San Jose, California. Stevens Creek Volkswagen is a Volkswagen Authorized Dealer. Plaintiffs purchased the SportsWagen in reliance on Volkswagen's representations that the car was an environmentally-friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. They would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

20. Plaintiff Mark Schumacher ("Schumacher") resides in Gainesville, Virginia. In 2012, he purchased a 2012 Model Year Volkswagen Passat SE TDI. Schumacher purchased the Passat from Lindsay Volkswagen in Sterling, Virginia. That company is a Volkswagen Authorized Dealer.Plaintiff Schumacher purchased the Passat in reliance on Volkswagen's representations that the car was an environmentally-friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. He would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

21. Plaintiff Stephen Verner ("Verner") is an architect and resident of Oakland,

VW FOIA, EPA 06/20/2017 2017-FFP_030987

California. In 2013, he purchased a TDI Golf four door from Royal Motor Sales in San Francisco, California. Royal Motor Sales is an Authorized Volkswagen Dealer. Verner purchased the Golf in reliance on Volkswagen's representations that the car was an environmentally friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. He would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

B. Defendants.

22. Defendant VWAG is a car corporation organized and existing under German law, with its principal place of business in Wolfsburg, Germany. VWAG is the parent company of Defendants VWoA and Audi.

23. Defendant Audi AG is a car corporation organized and existing under German law, with its principal place of business in Ingolstadt, Germany. Audi was created when VWAG merged two of its companies, Auto Union and NSU Motorenwerke AG. Audi is a 99.55%-owned subsidiary of the Volkswagen Group. Audi is now Volkswagen's luxury vehicle brand, and uses the slogan "Truth in Engineering".

24. Defendant the Volkswagen Group of America, Inc. is a corporation organized and existing under New Jersey law. Its headquarters are in Herndon, Virginia. The Volkswagen Group of America, Inc. is a wholly-owned subsidiary of VWAG. It is one of the world's largest producers of passenger cars. It sells the Beetle, Beetle Convertible, CC, Eos, e-Golf, Golf, Golf GTI, Golf SportWagen, Jetta, Passat, Tiguan, and Touareg vehicles through Volkswagen Authorized Dealers located in the United States. Volkswagen Group of America, Inc.'s operations in the United States include research and development; parts and vehicle processing; parts distribution; sales, marketing and service offices; financial service centers; and manufacturing.

25. Defendant Volkswagen of America, Inc. is owned and operated by the Volkswagen Group of America, Inc. and sells Volkswagen vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

26. Defendant Audi of America, LLC is a subsidiary of Audi AG that sells Audi vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

III. JURISDICTION AND VENUE.

27. This Court has jurisdiction over this action pursuant to 28 U.S.C. §§ 1331, 1332(d), 1337(a) and 1367. This court also has supplemental jurisdiction pursuant to 28 U.S.C. §1367(a).

28. Venue is proper in this judicial district and in the Alexandria Division thereof pursuant to 15 U.S.C. §§ 15 and 22, and 28 U.S.C. § 1391(b) and (c), in that at least one of the Defendants resides in this judicial district, is licensed to do business or is doing business in this judicial district.

IV. TRADE AND COMMERCE.

29. Approximately 482,000 Class Vehicles have been sold or leased in the United States in a continuous and uninterrupted flow of interstate commerce and foreign commerce during the last seven years, including through and into this judicial district. The business activities of the Defendants substantially affected interstate trade and commerce in the United States and caused antitrust injury in the United States.

V. FACTUAL ALLEGATIONS.

A. Automobile Emissions Regulations in the United States.

30. Congress enacted the first major Clean Air Act ("CAA") and established the EPA in 1970. The CAA, amended in 1975 and 1990, requires vehicle manufacturers to certify to the EPA that their cars and trucks will meet applicable federal emission standards.[29] The EPA administers a certification program to ensure that every vehicle complies with its emission standards. EPA-issued certificates of conformity are required for every vehicle sold in the United States, and the EPA must approve every vehicle entering United States commerce. In these

[29] http://www2.epa.gov/laws-regulations/summary-clean-air-act.

VW FOIA, EPA 06/20/2017 2017-FFP_030989

certification efforts, the EPA relies on test data submitted by automobile manufacturers, which submit the vehicles to the agency's testing procedures in their own laboratories. The EPA audits a small fraction of the new vehicles each year to ensure compliance.[30]

31. The Class Vehicles, like any other car sold in the United States, were required to satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. §86.1811-4; Clean Air Act §101(b)(1) – (2), 42 U.S.C. §7401(b)(1)(2).

32. Section 203(a)(3)(b) of the CAA prohibits the manufacture, selling, or installation of any device that bypasses, defeats or renders inoperative a required element of a vehicle's emissions control system. 42 U.S.C. §7522(a)(3)(b). Section 203(a)(10 of the same statute also prohibits the sale of motor vehicles or engines that are not covered by valid certificates of conformity with applicable emissions standards. 42 U.S.C. §7522(a)(1). The regulatory requirements for defeat devices are set forth in 40 C.F.R. Part 86.

33. The EPA has been rigorous in punishing automobile manufacturers or engine makers that utilize defeat devices. For example, in late 1995, it entered into a $45 million dollar settlement with General Motors Corporation regarding the use of defeat devices on 470,000 Cadillac cars.[31] Likewise, in August of 1998, it fined Honda $267 million and Ford $7.8 million for selling vehicles equipped with defeat devices that prevented emission control systems from working properly.[32] Similarly, in October of that year, it and the DOJ fined seven truck and heavy duty equipment manufacturers $83.4 million for engaging in similar conduct.[33]

---

[30] http://www.autonews.com/article/20151004/OEM11/310059955/vw-emissions-violations-put-self-certification-under-new-scrutiny.

[31] http://www.autosafety.org/sites/default/files/imce_staff_uploads/Cadillac%20%2445%20Million%20Defeat%20Device%20Penalty%2011-31-95.pdf.

[32] http://www.autosafety.org/sites/default/files/imce_staff_uploads/defeat.pdf

[33] http://www2.epa.gov/enforcement/cummins-engine-company-diesel-engine-clean-air-act-settlement.

VW FOIA, EPA 06/20/2017 2017-FFP_030990

34. Volkswagen was or should have been aware of these precedents. Indeed, the company itself is a recidivist violator of the CAA. In July of 1973, the EPA referred to DOJ for legal action a claim that defeat devices were installed on 1973 Volkswagens. A copy of that referral is attached as Exhibit 3 to this complaint. The matter was settled for $120,000 in March of 1974.[34] Similarly, in June of 2005, Volkswagen entered into a consent decree with DOJ whereby it paid a $1.1 million penalty concerning its failure to notify the EPA of emissions defects in certain vehicles manufactured at its facility in Mexico.[35] A copy of that decree is attached as Exhibit 4 to this Complaint.

35. CARB is a department of the California Environmental Protection Agency. It was created in 1967. California is the only state permitted to have such a regulatory agency, because it was created prior to the enactment of the CAA. CARB's mission is to "[t]o promote and protect public health, welfare and ecological resources through the effective and efficient reduction of air pollutants while recognizing and considering the effects on the economy of the state."[36]

36. The EPA introduced phased in Tier 2 emissions standards from 2004 to 2009. California has similar standards in its CA LEV II standard. The Tier 2 Bin rating system applied to all passenger vehicles regardless of fuel type. Tier 2 Bin 5 standards--the ones applicable to the Class Vehicles--imposed an emission rate for NOx of 0.07 grams per mile.[37]

37. New cars that are sold bear stickers indicating that they are EPA-and/or CARB compliant. Here is a photograph of such a sticker on the inside of the hood of a TDI Audi A3, one of the Class Vehicles.

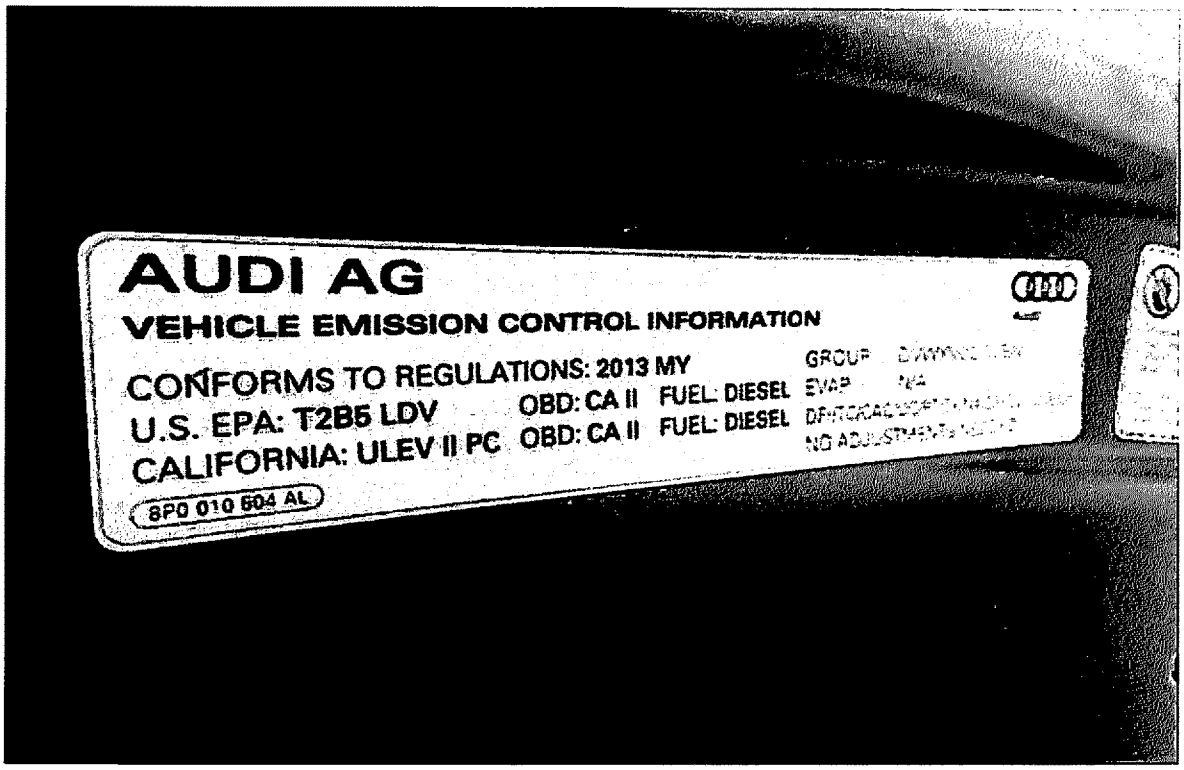
---

[34] http://www.autosafety.org/sites/default/files/imce_staff_uploads/VW%20Defeat%20Device%20%24120%2C00%20fine%203-12-74%20Pr.pdf.

[35] http://www.autosafety.org/sites/default/files/imce_staff_uploads/volkswagen-cd.pdf.

[36] http://www.arb.ca.gov/html/mission.htm.

[37] http://www.nctcog.org/TRANS/air/vehicles/tech/compliance/index.asp.

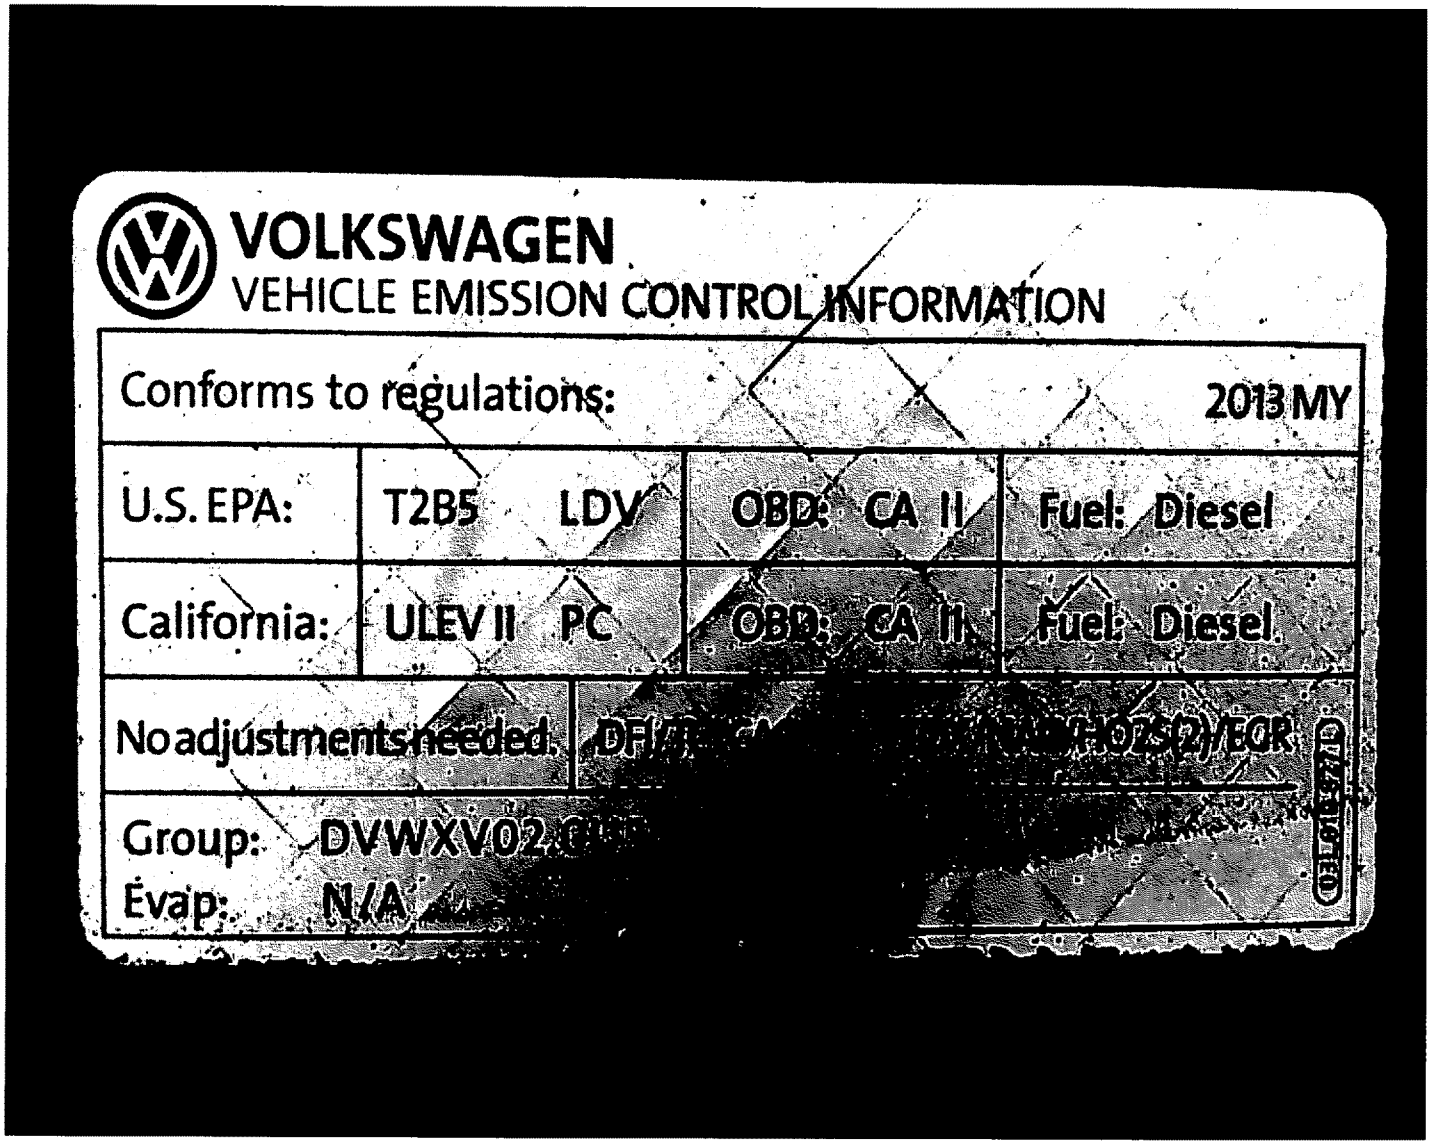


And here is a similar sticker for a 2013 TDI Volkswagen Golf:

//

//

//



VOLKSWAGEN
VEHICLE EMISSION CONTROL INFORMATION

Conforms to regulations:			2013 MY
U.S. EPA:	T2B5 LDV	OBD: CA II	Fuel: Diesel
California:	ULEV II PC	OBD: CA II	Fuel: Diesel
No adjustments needed.	DPF/[illegible]	[illegible]HO2S(2)/EGR	
Group: DVWXV02.[illegible]			
Evap: N/A			

Through these types of notice, Volkswagen was representing to customers that the Class Vehicles complied with federal and state emissions laws. This was an outright lie.

B. Diesel Cars And Control of NOx Emissions.

38. Diesel-powered cars, like gasoline-powered cars, must also meet the emissions standards established by the EPA and CARB. With diesel-powered engines, car manufacturers must use different--and more expensive--emission control systems than are used in gasoline-powered cars.

39. Diesel fuel has a greater energy density than gasoline. It converts heat into energy more efficiently than gasoline, sending less heat out of the tailpipe than gas-powered vehicles. Because it has greater energy density, diesel also is more efficient: diesel vehicles can get up to 30% more miles per gallon than similar gasoline-powered cars. In addition, because of their higher compression, diesel engines can generate a lot of torque, providing strong acceleration and additional power needed for towing.

40. While diesel vehicles have certain advantages over gasoline, they also have some disadvantages. Because diesel fuel is heavier and oilier than gasoline, it can generate more pollution. While diesel engines emit lower amounts of carbon monoxide than gasoline-powered engines, they emit more NOx.

41. Diesel fuel exhaust has been recognized by the World Health Organization to be a carcinogen for humans.[38]

42. Automakers have faced significant challenges in controlling NOx emissions sufficiently to meet environmental standards, particularly with smaller vehicles, and particularly in the United States, which has some of the strictest emission controls in the world. The website of greencongress.com explains the two types of approaches diesel automobile manufacturers have used to deal with NOx emissions:

[38] http://www.iarc.fr/en/media-centre/pr/2012/pdfs/pr213_E.pdf.

VW FOIA, EPA 06/20/2017 2017-FFP_030994

> Broadly, there have been two catalytic approaches used to reduce exhaust NO_x: urea-based selective catalytic reduction (SCR) and lean NO_x trap (LNT) catalysts.
>
> --The urea-SCR (urea=AdBlue) approach requires on-board storage of the reductant fluid which is introduced into the exhaust upstream of the SCR catalyst. It is then converted to ammonia which interacts with NO_x on the SCR catalyst to form water and nitrogen.
>
> --LNT technology utilizes fuel from the vehicle and advanced engine controls to enable periodic operation of the engine at rich air-to-fuel ratios to produce oxygen-depleted exhaust suitable for reducing NO_x stored on the LNT catalyst surface.[39]

43. The article indicates that Volkswagen had planned to use both technologies as of 2007, but elected to go with the LNT approach (which it referred to as TDI). As explained below, the deciding factor was apparently cost. Because of the extra equipment (including a urea tank) and technology required to clean the NOx emissions from the diesel exhaust, SCRs can add significantly to the cost of producing the engine. They also make diesel cars heavier than they otherwise would be, thus potentially decreasing fuel efficiency, torque and power.

44. Honda, which sells diesel cars in markets other than the United States, never tried to sell them here. That is because, according to Honda's research, "[t]he market would not bear the costs of doing diesel correctly." In order to meet the stringent United States emissions standards, Honda would have had to add costly emissions controls to every diesel model, which would make them more expensive than gasoline-powered competitors. "At such a high premium, customers simply wouldn't buy them."[40]

C. Volkswagen's Decision To Use TDI Technology.

45. Volkswagen has been selling cars in the United States since 1949, when it introduced the iconic Volkswagen Beetle. Although it was for many years the top-selling imported car in the United States, Japanese imports overtook Volkswagen and other European imports in

---

[39] http://www.greencarcongress.com/2015/09/20150921-vw2l.html.

[40] http://mashable.com/2015/09/27/vw-dieselgate/#2VosDbcL7iqT.

the 1990s.

46. The decisive factor in the decision to use TDI technology in 2007-08 was the appointment of Winterkorn as CEO of VWAG in January of 2007. Winterkorn was involved in overseeing research and development and had that responsibility at the time he resigned as CEO. In 1995, he took over as the head of Volkswagen Group Product management and a year later, he assumed the role of Member of the Board of Management for "Technical Development" at the Volkswagen brand. He assumed a similar role when he became Chairman of the Board of Management at Audi.[41]

47. Before Winterkorn took over as VWAG's CEO on January in 2007, Volkswagen had partnered with Bosch and Daimler to explore the use of a diesel emissions control system called BlueTec.[42] BlueTec was a technology developed by the latter two companies and championed by Wolfgang Bernhard ("Bernhard"), former head of the Volkswagen brand and a former Daimler executive. BlueTec was an SCR technology; it required the use of a liquid urea tank, so that urea could be sprayed onto the emissions in order to neutralize the NOx. The urea tank not only takes up space and adds weight (disadvantages that are especially acute in the market for small, fuel-efficient cars), but also requires the owner to refill the tank, making the diesel engine more inconvenient than a traditional gasoline-powered car. When Bernhard left the company after Winterkorn took control, the BlueTec technology was scrapped for smaller vehicles. Volkswagen only began using a form of SCR technology on a few of its smaller vehicles in 2012.

48. *Automotive News* describes the sequence of events:

> *Bild am Sonntag* said the roots of the crisis were planted in 2005 when then-VW brand Chief Wolfgang Bernhard wanted VW to

---

[41] *See* http://www.volkswagenag.com/content/vwcorp/content/en/the_group/senior_management/winterkorn.html.

[42] For the source of this information, *see* http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

VW FOIA, EPA 06/20/2017 2017-FFP_030996

> develop a new diesel engine for the U.S. market. Bernhard recruited Audi engineer Rudolf Krebs who developed a prototype that performed well in tests in South Africa in 2006, the paper said.
>
> Bernhard and Krebs argued that the only way to make the engine meet U.S. emission standards was to employ in the engine system an AdBlue urea solution used on larger diesel models such as the Passat and Touareg, according to the report.
>
> This would have added a cost of 300 euros ($335 in today's U.S. dollars) per vehicle -- a sum that VW finance officials said was too much at a time when a companywide cost-cutting exercise was under way.
>
> Bernhard left VW in January 2007 before the diesel engine went into production. Krebs was moved to another role when Martin Winterkorn became VW Group and brand CEO in 2007.
>
> Winterkorn, Audi's former CEO, asked Audi development boss Ulrich Hackenberg and Audi engine boss Wolfgang Hatz to move to VW's Wolfsburg headquarters and continue development work on the engine, *Bild am Sonntag* said.
>
> The engine then ended up in VW Group diesels with its engine software manipulated to fool diesel emissions tests in the U.S.[43]

Hatz and Hackenberg, as noted above, were two of the executives whom VWAG recently suspended.

49. Engineers at Volkswagen had been looking at an alternative to BlueTec technology, an alternative that ultimately evolved into the TDI "Common Rail" system. In 2006, Richard Dorenkamp, head of Volkswagen's diesel engine development, gave a presentation in Detroit. He described the TDI system Volkswagen engineers developed and how it could be used in small cars and meet increasing US demands for fewer emissions.[44] Volkswagen's TDI Clean Diesel pollution

---

[43] http://www.autonews.com/article/20150927/COPY01/309279989/bosch-warned-vw-about-illegal-software-use-in-diesel-cars-report-says. Winterkorn was generally very concerned about the costs associated with developing eco-friendly automotive engines. As he said at the 2014 Paris auto show, "[c]limate protection is not available free of charge. Every gram of reduction in [tailpipe] C02 costs us 100 million euros. Every gram!" http://blog.caranddriver.com/vws-winterkorn-to-greens-so-get-off-our-backs-already/.

[44] http://www1.eere.energy.gov/vehiclesandfuels/pdfs/deer_2006/session7/2006_deer_dorenkamp.pdf.

control technology differed from the SCR technology used by other manufacturers to control NOx emissions. The greencarcongress.com article cited earlier describes it in detail. Instead of having a urea tank, the TDI Clean Diesel cars technology used a trap to collect NOx. While saving the space, weight and cost required by the urea tank in the SCRs, Volkswagen's TDI Clean Diesel technology--when it was operational--required additional use of fuel, thus degrading both gas mileage and performance. The trap was controlled by a computer module that could save fuel by allowing more pollutants to pass through the exhaust system.

50. In June of 2007, six months after Winterkorn took over as CEO of VWAG, Volkswagen issued a report entitled "Power Train and Fuel Strategy--The Path To The Future."[45] It stated:

> In the first stage on the path to this independence, it will be important to utilize existing fossil fuels as efficiently as technically possible. Volkswagen is putting its stamp on this phase with vehicles such as the BlueMotion models, a universally fuel-efficient fleet of TDI engines, highly efficient and unique TSI engines, successful natural gas vehicles (EcoFuel) and a lineup of models that still leaves room for automotive dreams. Very soon these fundamental technologies will be further refined. **New powertrains, including an engine concept developed for use in the USA, under the working title "BlueTDI", are already in the prototype stage. These engines will fulfill the toughest emissions laws in the world – even the so-called "Tier2 Bin5" in California, one of the most stringent emissions standards in the world.** (Emphases added).[46]

51. Volkswagen had planned to introduce the Jetta TDI Clean Diesel in the United States earlier than it eventually did. In November of 2007, it was reported as follows:

---

[45] It can be found at http://www.volkswagenag.com/content/vwcorp/info_center/en/themes/2007/06/powertrain_and_fuel_strategy.html.

[46] In 2008, five VWAG engineers published a two-part article in the May and June issues of *MTZ* magazine saying they had resolved the issue of how to best control emissions and could now meet California standards through the use in part of a new on-board diagnostics system. Similarly, Achim Freitag, a testing engineer in Volkswagen's diesel development department, touted the new engine in a speech given later that year. *See* http://www.pbs.org/wgbh/nova/next/tech/volkswagen-diesel-emissions/.

VW FOIA, EPA 06/20/2017 2017-FFP_030998

> A problem with the emissions system in Volkswagen's new Jetta TDI will delay the launch of the diesel sedan for about six months. The car is critical to VW's plans to get back on track in the United States.
>
> VW spokesman Keith Price confirmed that the delay will be announced this week at the Los Angeles auto show. Price would not give specifics about the technical problem, but he said it has been fixed.
>
> The technical changes engineers made to solve the problem mean the car must go through emissions testing and validation again, Price said.
>
> VW dealers have been without a new diesel car to sell since last spring. Production of the new model, which will be sold in all 50 states, was scheduled to start in January. The car will be built in Puebla, Mexico.
>
> U.S. sales originally were expected to begin in early spring, Price said. Now sales won't start until later in the summer."
>
> "Sure, they're disappointed," Price said of dealers who have learned of the delay.
>
> Price said there is a lot of pent-up demand from loyal VW diesel buyers for the next- generation Jetta, which has a new engine built in Germany and a new diesel fuel injection system.
>
> "They're disappointed, but they see the point that this car has to be perfect," Price said of the dealers, adding, "They recognize the importance of this not only for their stores, but for the VW brand."
>
> A fleet of about 40 Jetta TDIs is undergoing testing as part of the validation procedure.[47]

52. What apparently happened is that the TDI technology failed initially to withstand United States emissions testing. The decision was made to delay the launch of the vehicle and activate the algorithm that functioned as a defeat device in the software management system. This is consistent with the timing of the letter from Bosch described above that raised the illegality of such a tactic. It is also consistent with recent revelations that appeared in the October 4 issue of *Bild am Sonntag*:

---

[47] http://www.cleanmpg.com/forums/showthread.php?t=7254.

VW FOIA, EPA 06/20/2017 2017-FFP_030999

> An internal review at Volkswagen AG shows the decision to install software that reduces diesel emissions in testing was made just before serial production of the company's EA 189 engine [used in many of the Class Vehicles], German tabloid Bild am Sonntag said.
>
> Bild said the software was first installed in its diesel engines in 2008, shortly before the EA 189 was mass produced. The move was taken because there was no way at the time to reconcile meeting emission standards within the targeted cost of the engine, the tabloid said in an advance release of the article to be published Sunday. Otherwise the company would have had to abandon the introduction of the engine, development of which was begun in 2005, the newspaper said.[48]

53. The 2009 Model Year TDI Jetta was introduced and passed the Tier 2 Bin 5 emissions test with flying colors. A Reuters article describes its successful launch:

> Volkswagen had heavily marketed what it called "clean diesel" engines starting in 2008 with the 2009-model Jetta TDI. It appeared to have found a sweet spot between high-performance and fuel-efficiency with a zippy, fun-to-drive car that topped 40 miles per gallon in highway driving. Named "Green Car of the Year" at the Los Angeles auto show in 2008, the Jetta TDI was seen as a breakthrough in a country where diesel passenger cars occupy a tiny niche compared with Europe, where they are about half of the market.
>
> "It's not your grandfather's diesel," Krause said in a September 2008 presentation to U.S. regulators, according to a video of the remarks.
>
> [Norbert] Krause [head of VWoA's environmental office until 2009] and other VW officials promised a diesel that would meet pollution laws in all states, including California where diesel engines had long been associated with smog and cancer-causing soot.
>
> By that point, VW and other automakers had lobbied for almost a decade for regulators to give diesel another chance. In 2000, VW and other companies with an interest in promoting diesel, including Mazda, formed the Diesel Technology Forum to lobby for increased use in the United States as a way to reduce reliance on imported oil. In 2005, an energy bill signed by President George W. Bush offered tax credits for diesel buyers. That gave the first wave of diesel Jetta buyers an income tax credit of $1,300 each.

[48] http://www.marketwatch.com/story/vw-began-using-emissions-software-in-2008-report-2015-10-04.

> In 2009, after the new Jetta went on sale, VW dealers initially sold out, including in California where regulations had effectively shut the market to diesels earlier in the decade.[49]

54. As noted in the article, *Green Car Journal* gave it the 2009 Green Car of the Year award and gave the TDI Audi A3 the 2010 Green Car of the Year Award.[50] Those awards have been rescinded in light of the present scandal.[51] The TDI Clean Diesels were a resounding success and VWoA sold many units.[52] As recently as its 2014 sustainability report, VWAG crowed about how "[t]he Volkswagen Group has a long tradition of resolute commitment to environmental protection" and how it intended to "put our creative powers to good use for the benefit of the people and the environment."[53]

55. At conferences and in published papers, Volkswagen extolled the efficiency and low emissions of its Clean Diesel technology.[54] And commentators agreed. One stated that Volkswagen was "the only company to have mastered the new emissions regulations using a compact, inexpensive treatment system. It allowed them to roll out diesel engines in one small car after another at relatively low prices."[55] Volkswagen's competitors had long wondered how Volkswagen could produce a clean diesel engine at such an affordable price. As Robert Lutz,

former vice chairman of General Motors Corporation, recounted: "I kept asking our engineers: 'What's wrong with you guys? VW seems able to do it.' I said, 'Are they magicians or something?' The engineers said they couldn't answer that question."[56] Now, they have their answer. Volkswagen cheated.

56. The competitive advantages of cheating on emissions have now become clear. "Manipulating emissions results allowed Volkswagen to keep down engine costs in a 'clean diesel' strategy that was popular in Europe and at the heart of a drive to improve U.S. results."[57] As an article in the *New York Times* put it, "[d]isabling the emissions controls brought major advantages, including much better mileage--a big selling point in Volkswagen's push to dominate in America."[58] These sales were part of the reason VWAG was able to surpass Toyota as the world's biggest automaker in 2015, as noted above. And they were sales built upon lies.

57. This systemic attitude of winning at all costs in spite of noncompliance with national environmental regulations is part of the corporate culture of Volkswagen, as explained at length in a September 24, 2015 *New York Times* article:[59]

> There is a long tradition of scandal and skulduggery in the auto industry, but few schemes appear as premeditated as Volkswagen's brazen move to use sophisticated software to circumvent United States emissions standards.
>
> That such a thing could happen at Volkswagen, Germany's largest company and the world's largest automaker by sales — 202.5 billion euros last year — has mystified consumers and regulators around the world. But given Volkswagen's history, culture and

[59] http://www.nytimes.com/2015/09/25/business/international/problems-at-volkswagen-start-in-the-boardroom.html?_r=1.

corporate structure, the real mystery may be why something like this didn't happen sooner.

"The governance of Volkswagen was a breeding ground for scandal," said Charles M. Elson, professor of finance and director of the John L. Weinberg Center for Corporate Governance at the University of Delaware. "It was an accident waiting to happen." The company, founded by the Nazis before World War II, is governed through an unusual hybrid of family control, government ownership and labor influence. Even by German standards, "Volkswagen stands apart," said Markus Roth, a professor at Philipps-University Marburg and an expert in European corporate governance. "It's been a soap opera ever since it started."

****

I spoke this week to a longtime former senior Volkswagen executive, who agreed that a scandal, especially one involving emissions, was all but inevitable at Volkswagen. He cited the company's isolation, its clannish board and a deep-rooted hostility to environmental regulations among its engineers.

The former executive, who spoke on the condition of anonymity because he now works at a competing global automaker, said that Wolfsburg, where Volkswagen is based in Lower Saxony and the city with the highest per capita income in Germany, is even more remote and isolated than Detroit was in its heyday. "The entire economy is automotive," he said. "People have a completely uncritical view of cars and their impact on the environment because they all make a living from the industry."

****

The Volkswagen board has been especially slow to move on environmental issues, investing less in electric and hybrid engine technology than industry leaders.

"There's an attitude among the German public that it's very unfair for the U.S. to target the auto industry over emissions," Professor Roth said. "If you have electric cars and a coal-fired plant producing the electricity, you gain nothing."

The former Volkswagen executive said Volkswagen's engineer-driven culture takes the notion even further. He said the engineers felt that the politicians were guilty of rank hypocrisy, especially in the United States, also grumbling that electric cars make no sense as long as power plants are burning fossil fuels.

"There's an attitude of moral superiority there," he said. "The engineers think they know best."

That Volkswagen is nonetheless obliged to obey applicable

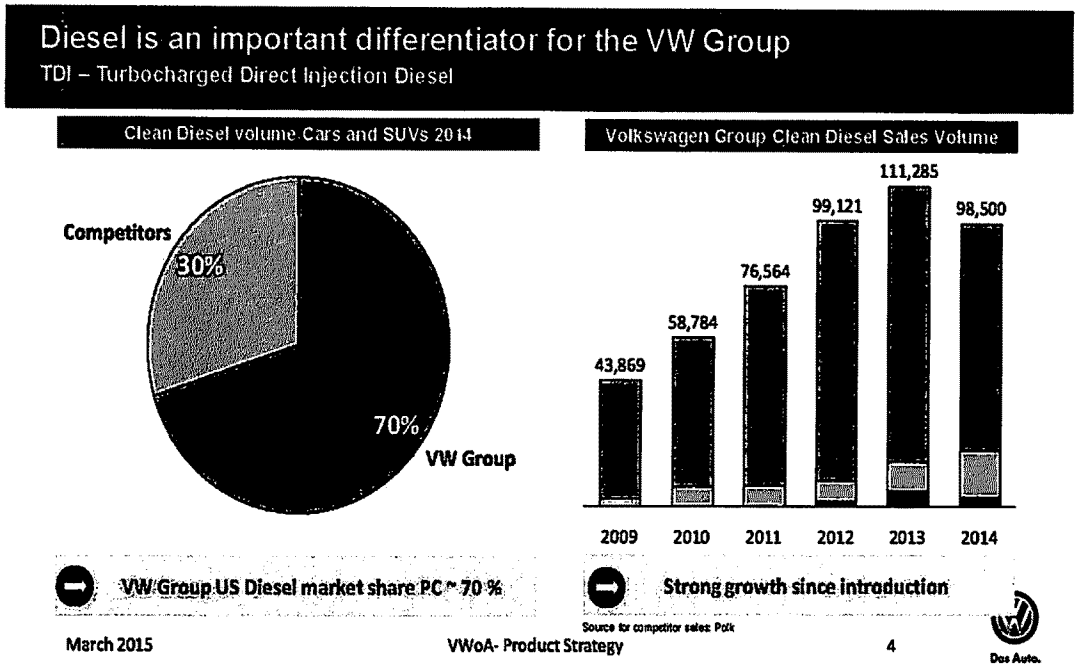
> environmental laws, he said, is a notion likely to fall on deaf ears in Wolfsburg, especially compared to demands to be No. 1 in sales. (The motive for the software evasion is widely believed to have been to increase sales of diesel-powered cars in the United States.)

Thus, executives and engineers at Volkswagen were clearly unhappy with United States automotive emissions standards and were all too willing to sacrifice those standards (and their obligations under United States antitrust laws) in order to ensure that their company became the number one automaker in the world. The current scandal involving Volkswagen Clean Diesel TDI vehicles is a direct result of that arrogant intention to flout United States environmental laws. It is also a direct result of what has been described by one German executive as Volkswagen's "uniquely awful" corporate governance.[60]

D. The Clean Diesel Car Market.

58. Volkswagen's illegal conduct in this country occurred in the Clean Diesel passenger car market in the United States (the "Clean Diesel Car Market"), which can be viewed as a market of its own or as a submarket of passenger cars sold in this country. This fact was confirmed in a presentation by Douglas Skorupski ("Skorupski"), Manager of Power Train Strategy for VWoA, given to the Diesel Technology Forum ("DTF") in March of 2015:

[60] http://www.cnbc.com/2015/10/04/volkswagens-uniquely-awful-governance-at-fault-in-emissions-scandal.html.



59. Thus, VWoA clearly views clean diesel cars as a distinct market and Volkswagen's TDI technology as a factor that allowed it to obtain a monopoly share of that market.[61] It distinguished Clean Diesel cars from gasoline/electric hybrid cars based on superior performance:

[61] The presentation can be found at http://cleandieseldelivers.com/media/Douglas-Skorupski-VWoA_DTF_March2015.pdf. Bosch has similarly identified a distinct Clean Diesel car category: http://www.low-carbonfuels.com/pdfs/acte2011presentations/Day1/Breakout1/LightDuty/ACT2011-Breakout1-FreitagAlexPresentation150.pdf. And the EPA has noted that "Clean diesel" refers to a three-part emissions control system that combines cleaner diesel fuel, advanced engines and effective emissions control technology.

"[o]ne way Volkswagen aimed to achieve its lofty goal was by betting on diesel-powered cars — instead of hybrid-electric vehicles like the Toyota Prius--promising high mileage and low emissions without sacrificing performance."[62] Similarly, a survey conducted by Strategic Vision for Volkswagen found that customers of diesel and hybrid vehicles are very different and there is "very little crossover from one to the other." [63] The same article noted that Clean Diesel TDI and hybrid buyers differed demographically; the latter were "were just 51 percent male, 78 percent of them were married, 89 percent had no kids in the household, and their average age was 61", while the former "included far more men than women[,] [f]ewer of them were married, but more of them had children in the house, and they were fully 17 years younger, with an average age of 44." Likewise, a Volkswagen Clean Diesel IQ survey found that diesel car customers are highly aware of the benefits of clean diesel technology in contrast to hybrid and gasoline car customers. Furthermore, 94% of diesel customers will purchase clean diesel cars again while only 26% of hybrid and gasoline car customers will consider clean diesel cars for their next purchase.[64] All of this indicates little cross-elasticity of demand between hybrid vehicles and Clean Diesel vehicles.

60. Indeed, the major European competitors of Volkswagen in the Clean Diesel Car Market belong, along with Volkswagen, to an organization that is devoted to extolling the benefits of Clean Diesel cars.[65]

61. BloombergBusiness noted that consumers are willing to pay a substantial premium

---

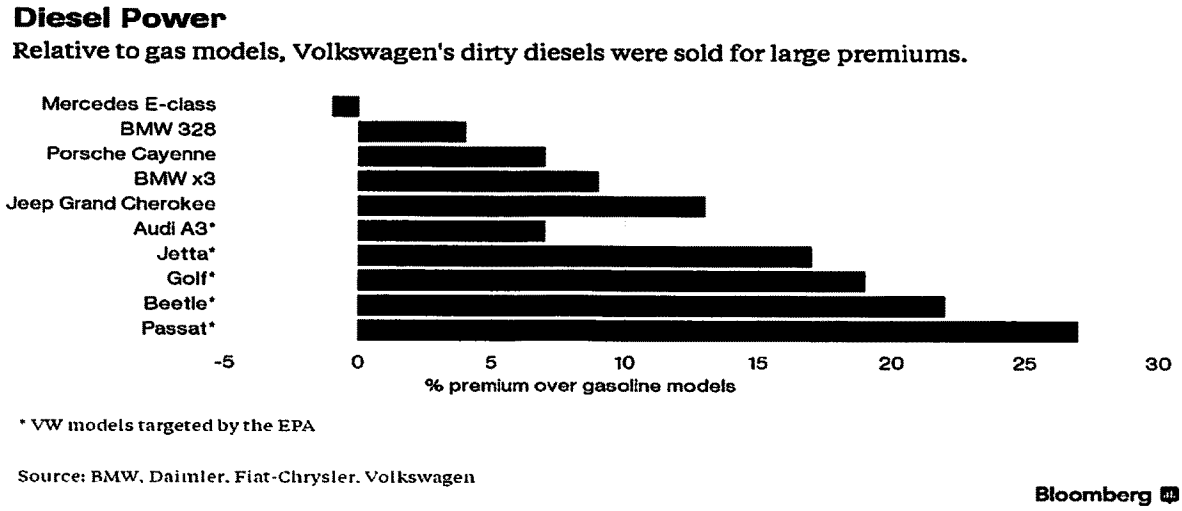
[62] http://mobile.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?referer.

[63] http://www.greencarreports.com/news/1080201_vw-diesel-buyers-hybrid-buyers-both-want-fuel-economy-but-beyond-that.

[64] http://www.autosphere.ca/fleetdigest/2013/04/01/volkswagen-surveys-diesel-drivers/. *See also* http://www.cmu.edu/gdi/docs/diesel-and.pdf (noting many key differences between diesel and hybrid car customers).

[65] http://www.clearlybetterdiesel.org/index.html#cleanDiesel.

for Clean Diesel vehicles over those of its competitors.[66]



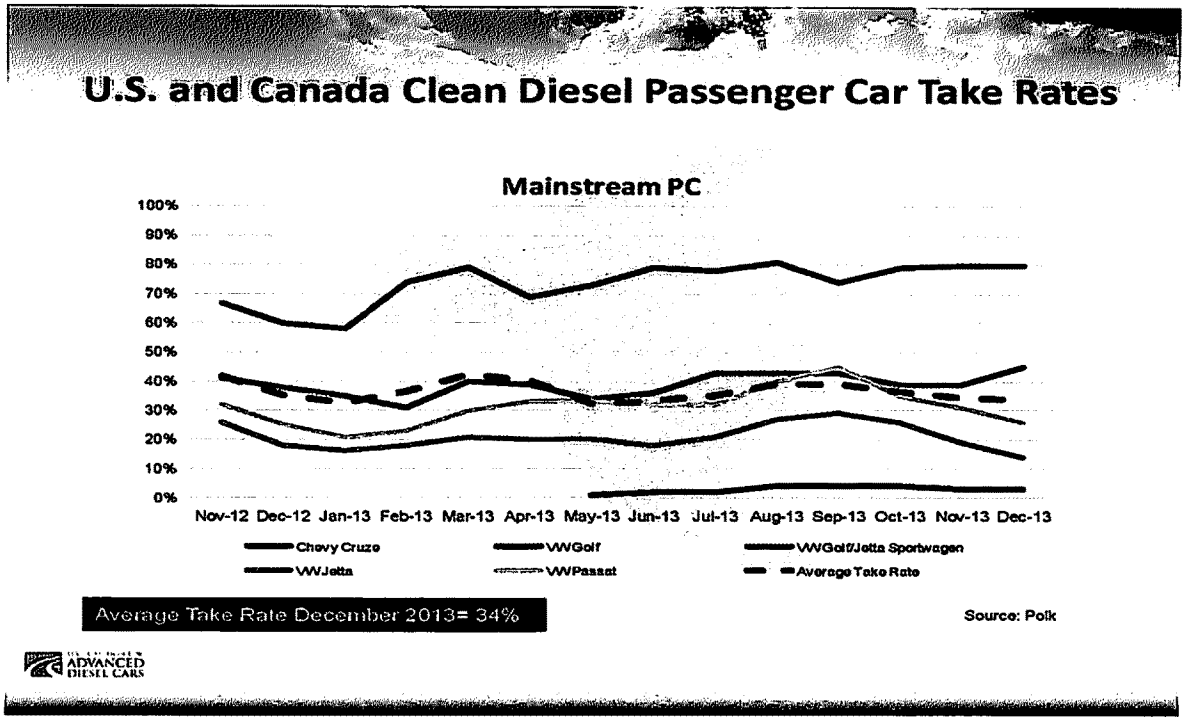
62. As the BloombergBusiness article goes on to explain:

> The math on diesel has never been tidy. The additional mileage is great, but unless one drives a lot, it doesn't really cover the added expense for the engine and for the fuel itself. At current gas prices, the diesel premium on the Passat—some $5,755—would buy enough gas to drive the gas-burning model for about 88,000 miles. **For the majority of diesel drivers, the factor that probably swung the decision was the apparent environmental benefit. The green aspect was the fulcrum.** (Emphases added).

Thus, Volkswagen's false claims about its TDI technology were a driving factor in the premium prices it charged consumers for such technology. As noted above, VWAG has taken full responsibility for the "economic damage" caused by its illegal conduct.

[66] http://www.bloomberg.com/news/articles/2015-09-23/volkswagen-s-other-diesel-ruse-premium-pricing.

63. A chart contained in a presentation made by CMW Research at the March 2015 DTF conference[67] underscores the differences in take rates between Volkswagen Clean Diesel cars and those made by its competitors:



64. The price premium for Clean Diesel vehicles is also reflected in this chart showing the price differentials between gasoline-powered models and Clean Diesel models of Volkswagen's own cars:

Clean Diesel Price Premium				
Mode	**Base**	**Mid-Level**	**Top-Level**	**Average**
VW Jetta	$2,860.00	$1,570.00	$1,030.00	$1,820.00
VW SportWagen	$5,570.00	$1,680.00	$0.00	$2,416.67
VW Golf	$2,400.00	$1,000.00	$1,000.00	$1,466.67
VW Golf	$2,950.00	$1,000.00	$1,000.00	$1,650.00
VW Beetle	$4,635.00	$4,920.00	$0.00	$3,185.00
VW Beetle	$4,080.00	$530.00	$700.00	$1,770.00
VW Passat	$5,755.00	$2,845.00	$2,135.00	$3,578.33

[67] http://cleandieseldelivers.com/media/Take-Rate-Slides-March-2014.pdf.

Audi A3	$2,300.00	$2,300.00	$2,300.00	$2,300.00
Average	$3,818.75	$1,980.63	$1,020.63	$2,273.33

E. Volkswagen's False Advertising.

65. Volkswagen, as part of its plan to increases sales and market share in the United States, increased its emphasis on diesel-powered cars and began marketing these cars heavily to the United States public beginning in 2008. It emphasized the TDI Clean Diesel cars' environment-friendly engine, excellent gas mileage, and high-quality performance. In one advertisement (which, as of this writing, was available on Audi's website after the scandal surfaced and is attached as Exhibit 5 to the Complaint),[68] for example, Volkswagen claimed:

> Getting more from less. Audi pioneered TDI® clean diesel engines to deliver more torque, lower fuel consumption and reduce CO2 emissions, compared to equivalent gasoline engines. The result of this revolutionary engineering delivers remarkable performance, while achieving increased fuel economy.

66. Another advertisement by VWAG for Clean Diesel cars asserts that

> This ain't your daddy's diesel. Stinky, smoky, and sluggish. These old diesel realities no longer apply. Enter TDI Clean diesel. Ultra-low-sulfur fuel, direct injection technology, and extreme efficiency. We've ushered in a new era of diesel.[69]

This internet advertisement is attached as Exhibit 6 to the Complaint.

67. Volkswagen's advertising relentlessly touted the supposed fuel efficiency and environmental features of its Clean Diesel TDI vehicles. In 2009, Volkswagen introduced its "Meet the Volkswagens" campaign, which promoted "fuel efficiency, green credentials, cost of ownership and safety," and compared Volkswagen's diesel passenger cars to its competitors. According to Tim Ellis, Volkswagen's marketing chief, the goal of this advertising campaign was to "grow the brand in the U.S."[70] This campaign, among other things, included social media links

---

68 https://web.archive.org/web/20150928180733/http://www.audiusa.com/technology/efficiency/tdi

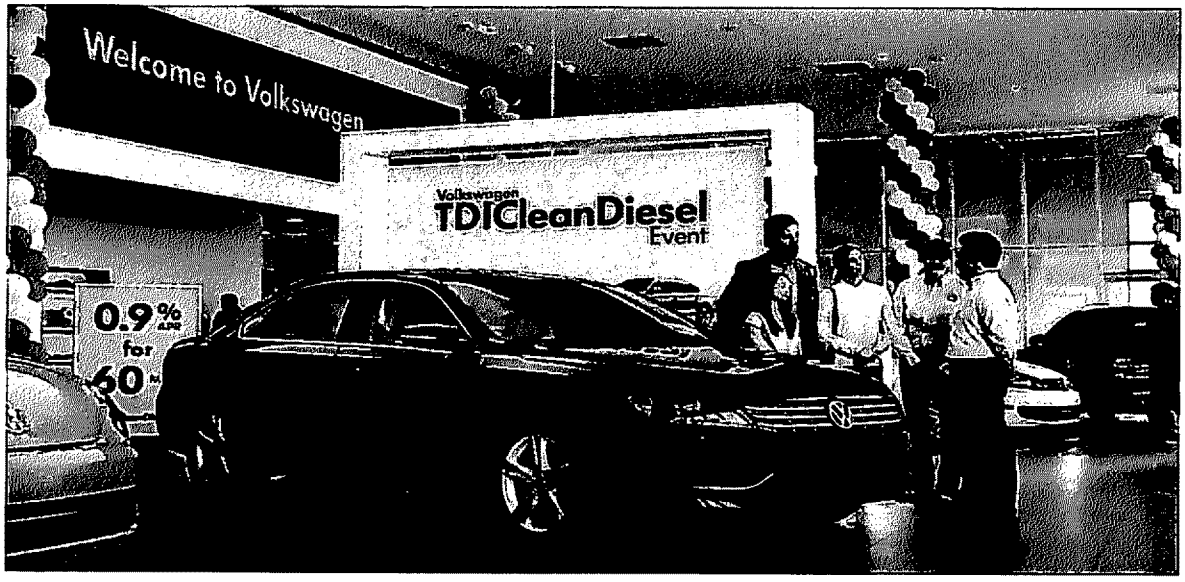
69 https://web.archive.org/web/20150330110301/http://www.vw.com/features/clean-diesel/.

70 http://abcnews.go.com/Business/story?id=7493781.

to a blog (tdi.vw.com/tdi), which focused on Volkswagen's TDI clean diesel model.

68. Between 2011 and 2013, Volkswagen spent more than $2.9 billion annually on advertising world-wide; many of those advertising dollars were directed at the United States public. Volkswagen issued hugely popular videos featuring the Golden Sisters, who purported to debunk the myths about polluting diesel cars.[71] Other videos that were highly successful included a "Truth or Dare" effort started in 2009 that was about "debunking the myths on clean diesel and fueling the passion of existing diesel owners"; a 2009 Audi video that proclaimed "diesel, no longer a dirty word"; and a Passat "being a Mom" video, all of which can be viewed on the *New York* magazine website.[72] Another well-known video showed German engineers of TDI Clean Diesel vehicles earning their "angel's wings."[73]

69. Volkswagen also used point-of-purchase displays at the showrooms of Volkswagen Authorized Dealers such as the one depicted below:



[71] http://blog.caranddriver.com/vws-hilarious-new-tdi-diesel-ads-return-excellent-viral-mileage/.

[72] http://nymag.com/daily/intelligencer/2015/09/vws-clean-diesel-ads-now-make-us-feel-dirty.html.

[73] https://www.youtube.com/watch?v=fwkPEza9FPw.

70. As VWoA's Mark Barnes put it, the TDI Clean Diesel cars were "fantastic power train[s]" with "very good fuel economy." Yet "[i]t's also good for the environment because it puts out 25% less greenhouse gas emission than what a gasoline engine would. And thanks to the uniqueness of the TDI motor, it cuts out the particulate emissions by 90% and the emissions of nitrous oxide are cut by 95%. So a very very clean running engine. Clean enough to be certified in all 50 states."[74]

71. In television and print advertisements and in social media, Volkswagen strived to present its Clean Diesel TDIs as the environmentally-friendly, fuel-efficient, fun-to-drive and reasonably priced passenger car. As noted above, Volkswagen's sham advertising campaign was a success. Unfortunately, all of these accolades were based on a sham perpetrated by Volkswagen for seven years.

F. Volkswagen's Defeat Device.

72. As noted above, Volkswagen's defeat device is described as a "sophisticated software algorithm" that detects when the car is undergoing emissions testing. The algorithm used information about how the car was being steered, how long the engine ran and atmospheric pressure to "precisely track" the conditions that corresponded to a federal emissions test, according to the EPA. During emissions testing, the software "turns on" the car's full emissions control system in order to pass the test. Under normal driving situations, however, these emissions control systems are ***turned off***, allowing the cars to spew as much as 40 times the allowable amount of NOx into the air. As an EPA spokesman noted, the defeat device was "particularly difficult for us to detect."[75] This ruse went undetected for seven years, although as noted above, Bosch and one

[74] http://www.businessinsider.com/volkswagen-preps-for-a-diesel-revolution-2009-10.

[75] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagons-deception-the-recall-that-never-fixed-any-cars/. A useful timeline of how the scandal came to light is provided on the website of Cars.com: https://www.cars.com/articles/vw-diesel-crisis-timeline-of-events-1420681251993/.

of VWAG's own engineers complained about it to the company.

73. One technology blog has described Volkswagen's defeat device as follows:

> The method by which Volkswagen diesel cars were able to thwart emissions tests and spew up to 40X the nitrogen oxide levels set by the Environmental Protection Agency was relatively simple. It was more likely no more than a single line of code used to detect when an emissions test was being performed and place the emissions system in an alternate mode — something as simple as a software "on/off" switch. Volkswagen AG CEO Martin Winterkorn, who stepping down as the result of his company's scandal, has said he had no knowledge of the emissions cheat, but software dev/test audit trails are almost certain to pinpoint who embedded the code and who authorized it. You can actually see who asked the developer to write that code," said Nikhil Kaul, a product manager at test/dev software maker SmartBear Software. "Then if you go upstream you can see who that person's boss was...and see if testing happened...and, if testing didn't happen. So you can go from the bottom up to nail everyone."[76]

74. As also noted above, 482,000 vehicles were described as affected, with over 50,000 in the state of California.[77]

75. In 2013 and again in 2014, the International Council for Clean Transportation ("ICCT") published studies showing serious discrepancies between laboratory and in-use emissions of certain cars, including VW TDI Diesel cars used in Europe.[78] A decision was made to test American Clean Diesel cars to show that they were success stories; the opposite turned out to be the case. The ICCT, in conjunction with researchers at and West Virginia University's Center for Alternative Fuels, Engines and Emissions ("CAFEE") conducted on-road emissions tests on three vehicles sold in the United States: a 2013 TDI Passat, a 2012 TDI Jetta, and a BMW X5

---

[76] http://developers.slashdot.org/story/15/09/24/1423225/how-did-volkswagen-cheat-emissions-tests-and-who-authorized-it.

[77] http://www.latimes.com/business/autos/la-fi-hy-california-dmv-vw-diesel-20150921-story.html. This number excludes unregistered vehicles.

[78] http://theicct.org/sites/default/files/publications/ICCT_LabToRoad_20130527.pdf; http://www.theicct.org/sites/default/files/publications/ICCT_LaboratoryToRoad_2014_Report_English.pdf)

SUV. These researchers found that for the Passat and Jetta, emissions were far higher than the emissions generated in the laboratory by CARB. The Jetta exceeded United States NOx emissions standard by 15 to 35 times, and the Passat by five to 20 times. In laboratory testing by CARB, in contrast, these same vehicles complied with United States NOx emissions standards. The CAFEE report is attached as Exhibit 7 to the Complaint. ICCT brought the information to the attention of CARB and the EPA, who commenced their own investigations and contacted Volkswagen. Volkswagen chalked the discrepancies up to "various technical issues and unexpected in-use conditions", but agreed in December of 2014 to recall approximately 500,000 vehicles in order to apply a "software patch."[79]

76. After the remediation, CARB in May of 2015 tested a 2012 TDI Passat on the road and in the laboratory. It found some improvement in in-use NOx emissions, but not enough. An article in the *Philly Voice* describes what happened next.

> On July 8, CARB shared its results with VW, but there was no change in Volkswagen's position. Some officials privately questioned whether Volkswagen was deliberately violating the federal Clean Air Act by installing defeat devices -- software programmed to switch engines to a cleaner mode during official emissions testing, according to a person involved in the process.
>
> During normal driving, the software then shuts off, enabling cars to emit as much as 40 times the legal limit of pollutants.
>
> In early August, Oliver Schmidt, who followed [Norbert] Krause and preceded [Stuart] Johnson in VW's U.S. engineering and environmental office, attended a conference in Traverse City, Michigan and told regulators Volkswagen stood by its conclusions that the problem was technical, people involved said.[80]

77. Then, on August 21, there was a complete reversal. The *Philly Voice* article goes on to describe what happened:

> After more than a year of stonewalling investigators, Volkswagen stunned two senior officials with the U.S. Environmental Protective Agency and California's environmental watchdog by admitting the automaker hacked its own cars to deceive U.S.

[79] http://www.cnbc.com/2015/09/24/.

[80] http://www.phillyvoice.com/year-stonewalling-volkswagen-stunned-regulators/.

> regulators about how much their diesel engines pollute.
>
> That disclosure on Aug. 21, confirmed by two people with knowledge of the exchange, shows Volkswagen buckled to pressure from environmental regulators almost a month earlier than the scandal was made public. The admission to regulators came after a year during which VW officials insisted to regulators that tests on its diesel cars showing a spike in pollution levels on the road were in error.
>
> ****
>
> At first, regulators were surprised that Volkswagen would make its confession at the conference, held in Pacific Grove, California. Minutes before Christopher Grundler, director of the EPA's transportation and air quality office, was to deliver a 9 a.m. speech to the conference, a Volkswagen representative told him about the deception. At the same meeting, representatives of the California Air Resources Board, a state agency that had been pushing VW hard, were also given a verbal notice of the deception, people with knowledge of the events said.
>
> Volkswagen declined to comment on the sequence of events described to Reuters. It isn't clear which VW representative delivered the news of the deception to Grundler and the CARB. Stuart Johnson, head of VW's engineering and environmental office in the United States, was registered to attend the Aug. 21 conference, which was organized by the University of California, Davis. Johnson, who still works for VW in Auburn Hills, Michigan, did not respond immediately to a request for comment.

78. Volkswagen was faced with the threat that the EPA it would not certify any of its 2016 models for sale in the United States until the questions surrounding the emissions discrepancies were answered. Volkswagen admitted that it relied upon a "second calibration" in the vehicles that was intended to run only during certification testing. This second calibration was triggered when a highly sophisticated software algorithm determined – after measuring factors like the position of the steering wheel, the vehicle's speed, pedal movement, and even barometric pressure – that the car was being tested. Then it would configure the engine to reduce emissions of NOx. As David Clegern of CARB explained, "[w]e met with VW on several occasions and they continued to dispute our data, so we'd return to the lab. Over time, VW had no other explanations left, and it was our lab staff who actually got VW to admit that there was, in fact, a defeat device."[81]

[81] http://www.foxnews.com/leisure/2015/09/22/for-7-years-vw-software-thwarted-pollution-regulations/.

As another CARB spokesperson told the *Washington Post*, "[t]hey basically ran out of excuses."[82]

79. The scandal surfaced on September 18, 2015, when CARB and the EPA announced that VWAG, Audi and VWoA had illegally installed emissions testing "defeat devices" in the aforementioned vehicles. *See* Appendices 1 and 2. The EPA found violations of 42 U.S.C. §§7522(a), 7522(a)(1) and 7522(a)(3)(B), as well as 40 C.F.R. §§86.1854-12(a)(3)(ii) and 86.1854-12(a). The EPA identified the following affected vehicles:

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2013	DVWXV02.0U4S	VW Passat
2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGAV02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

80. As noted above, Horn of VWoA admitted that Volkswagen was dishonest with both customers and regulators and Huber of VWAG called the matter a "moral and political disaster."

[82] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagonsdeception-the-recall-that-never-fixed-any-cars/.

81. Volkswagen has ordered its dealers to cease selling the Class Vehicles[83] and has set aside a minimum of 6.5 billion Euros ($7.2 billion) to deal with the fallout from this catastrophe, which it now concedes involved 11 million vehicles worldwide. An internal memorandum issued on September 22 details this:

Wolfsburg, 22 September 2015

Volkswagen AG has issued the following information:

Volkswagen is working at full speed to clarify irregularities concerning a particular software used in diesel engines. New vehicles from the Volkswagen Group with EU 6 diesel engines currently available in the European Union comply with legal requirements and environmental standards. The software in question does not affect handling, consumption or emissions. This gives clarity to customers and dealers.

Further internal investigations conducted to date have established that the relevant engine management software is also installed in other Volkswagen Group vehicles with diesel engines. For the majority of these engines the software does not have any effect.

Discrepancies relate to vehicles with Type EA 189 engines, involving some eleven million vehicles worldwide. A noticeable deviation between bench test results and actual road use was established solely for this type of engine. Volkswagen is working intensely to eliminate these deviations through technical measures. The company is therefore in contact with the relevant authorities and the German Federal Motor Transport Authority (KBA – Kraftfahrtbundesamt).

To cover the necessary service measures and other efforts to win back the trust of our customers, Volkswagen plans to set aside a provision of some 6.5 billion EUR recognized in the profit and loss statement in the third quarter of the current fiscal year. **Due to the ongoing investigations the amounts estimated may be subject to revaluation.**
Earnings targets for the Group for 2015 will be adjusted accordingly.

Volkswagen does not tolerate any kind of violation of laws whatsoever. It is and remains the top priority of the Board of Management to win back lost trust and to avert damage to our customers. The Group will inform the public on the further progress of the investigations constantly and transparently.

82. Volkswagen has indicated it will initiate a recall and remediation of the Class Vehicles, but there is no "fix" that can be achieved that would not result in lesser mileage per gallon or degraded performance, two of the key attributes on which TDI Clean Diesel cars were sold.

[83] *See* http://pics3.tdiclub.com/data/3209/stop-sale-note3.pdf.

> Experts Reuters spoke to indicate that two potential fixes could be needed for the two types of emissions control systems featured on 482,000 cars in the U.S., complicating the recall and refit process. Some experts opined that just a software solution could make the affected vehicles compliant with EPA regulations, reducing the performance characteristics of the engines in the process, while others suspect that a hardware solution may be needed for older vehicles without the urea injection system.
>
> A couple of experts warned that the potential solution could involve significantly increased consumption of urea, necessitating fill-ups at more frequent intervals such as every 5,000 miles, in addition to reducing the performance of the engines.[84]

The same point was made by the West Virginia AG in a complaint filed on October 2 against Volkswagen for civil penalties. It is attached as Exhibit 8. In that complaint, the West Virginia AG notes that "Volkswagen will not be able to comply with the EPA [recall] order to make the Affected Vehicles comply with emissions standards without substantially degrading their performance and fuel efficiency to a level below that advertised by Volkswagen, and below that experienced by consumers prior to, or when they purchased their vehicles." Thus, there is no valid "cure" for Volkswagen's conduct.

83. Nor can any recall cure the tarnished reputation of Volkswagen's TDI Clean Diesel vehicles and the substantial diminution of their resale value. The Kelley Bluebook has reported that prices for used Volkswagen diesel cars have declined by 21% in the last few weeks, reflecting the aftermath of Dieselgate.[85] Thus, customers not only overpaid when they bought the Class Vehicles, but have suffered a significant diminution of the resale value of their vehicles. Indeed, a survey of 460 fleet buyers in the United Kingdom revealed that 49% of them were reconsidering their contracts with Volkswagen in the aftermath of the Dieselgate revelations.[86]

84. As noted above, the Executive Committee of the Board that accepted his retirement

---

[84] http://autoweek.com/article/car-news/vw-diesel-emissions-fix-may-require-2-solutions.

[85] http://www.latimes.com/business/autos/la-fi-hy-auto-sales-20151001-story.html.

[86] http://www.dailymail.co.uk/money/news/article-3258793/VW-scandal-deepens-revealed-half-company-car-buyers-ditch-embattled-firm.html.

said that it "recognizes the economic damage caused" as well as the "loss of trust" among customers. No recall and supposed remediation can correct that.

85. A survey of vehicle owners conducted by AutoPacific[87] further reveals consumer disgust with Volkswagen. Only one in four have a positive opinion of Volkswagen, compared to three in four before the scandal. The corresponding figures for Audi were 29%, as opposed to 69%. Sixty-four percent of the survey respondents say they do not trust Volkswagen.

86. But the illegal conduct by Volkswagen has not just resulted in economic damage and loss of consumer trust. It has caused **the death of dozens of people in the United States over the last seven years and degraded the health of many more**. On October 3, Associated Press ("AP") laid out the facts.[88] AP calculated exhaust pollution year by year, starting with the ten to 40 times emissions level estimate by the EPA and then factored in mileage and car number totals from the Kelley Blue Book. It came up with a range of NOx pollution caused by the Class Vehicles and then took it to scientists who modeled mortality rates, which were confirmed by a dozen experts in emissions, risk and public health, none of whom were environmental advocates or representatives of automobile manufacturers. The results are depicted in the chart that follows.

//

//

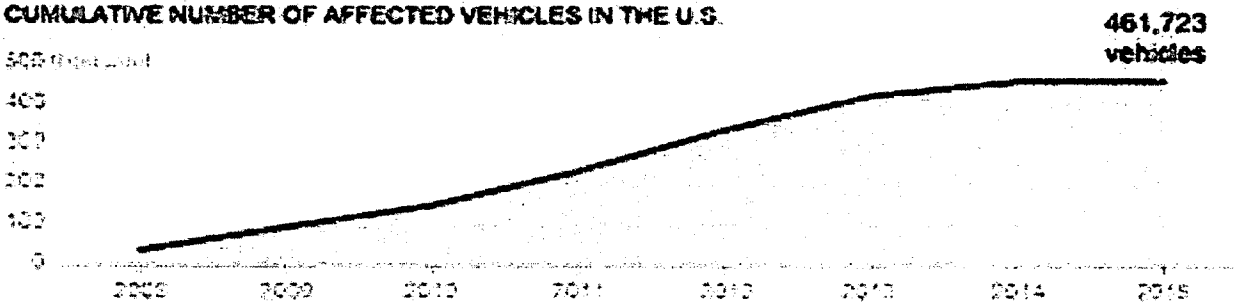
[87] http://www.autopacific.com/news-app/story.248/title.volkswagen-s-reputation-takes-big-hit-with-vehicle-owners-autopacific-predicts-tough-road-ahead.

[88] http://bigstory.ap.org/article/a6925f0af82e44aaa1a1ed4b55d030f6/ap-analysis-dozens-deaths-likely-vw-pollution-dodge.

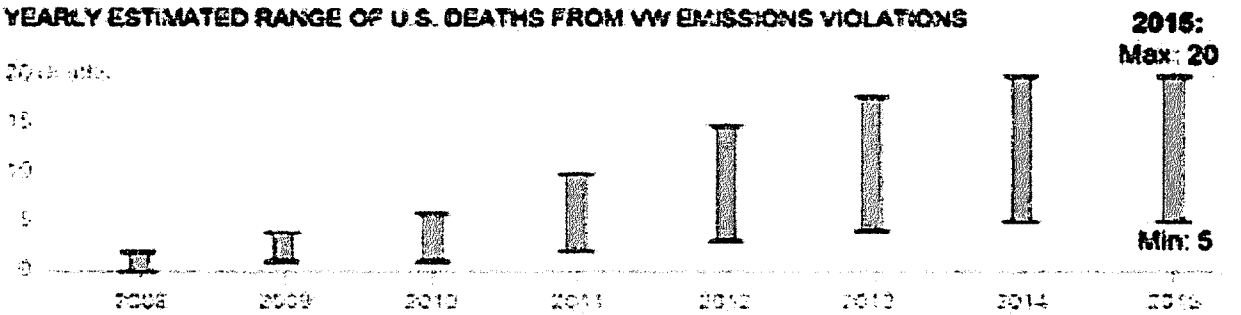
Calculating human toll of VW emissions problems

U.S. pollution resulting from Volkswagen's dodging of emissions tests is enough to have caused dozens of deaths since 2008. An AP analysis calculated upper and lower limits of pollution using the number of affected vehicles each year and average mileage. Scientists used that data in epidemiological computer models to estimate a range of deaths.

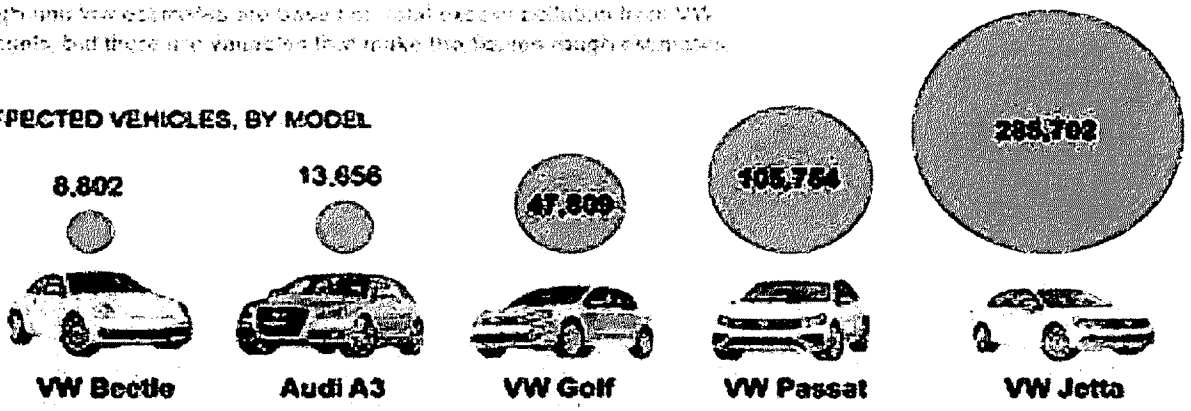
CUMULATIVE NUMBER OF AFFECTED VEHICLES IN THE U.S.



YEARLY ESTIMATED RANGE OF U.S. DEATHS FROM VW EMISSIONS VIOLATIONS



AFFECTED VEHICLES, BY MODEL



87. As the AP article notes, the Class Vehicles spewed enough NOx over the course of seven years to significantly degrade the environment in urban areas. Eric Schneiderman, the New York AG has said that "[t]he stakes could not be higher for the health and safety of our communities who, if Volkswagen's own admissions are true, have for years been breathing air containing excess pollution from their vehicles."[89] Harris County Texas (where the City of Houston is located) has already sued Volkswagen for $100 million in harm to air quality.[90]

88. As noted in the *Minneapolis Star-Tribune* in a follow-up piece on the AP story:

> Computer software allowed VW diesel cars to spew between 10 to 40 times more nitrogen oxides (NOx) than allowed by regulation, making this "clearly a concern for air quality and public health," said Janet McCabe, acting air quality chief for the U.S. Environmental Protection Agency.
>
> Nitrogen oxides mostly form smog — that murky, dirty air that makes it hard to see and for some people to breathe — but also amplify a deadlier, larger problem: tiny particles of soot. Numerous medical studies show those tiny particles cause about 50,000 deaths a year in the United States, mostly from heart problems.
>
> Nitrogen oxides can travel hundreds of miles, so pollution spewed in Pittsburgh can be felt on the East Coast, [Carnegie Mellon environmental engineer Professor Peter] Adams said.
>
> Experts calculate how much pollution costs society by looking at the value of lost lives. In this case, Adams and other said the lost lives — valued at $8.6 million apiece — overwhelm other costs such as lost work days or hospital costs. The overall annual cost of the extra pollutants from the VW diesels ranged from $40 million to $170 million, environmental engineering professors calculated. "Even the small increase in NOx from VW diesel emissions is likely to have worsened pollution along the roadways where they have traveled, and affected the lives of hundreds of thousands of people," said Dan Greenbaum, president of the Health Effects Institute in Boston.

---

[89] http://mobile.nytimes.com/2015/10/03/business/us-states-jumping-into-investigation-of-vw-emissions-deception.html?_r=0&referer=https://www.google.com/.

[90] http://www.wsj.com/articles/u-s-justice-department-conducts-criminal-probe-of-volkswagen-sources-say-1442869059.

> "To say millions of people of people are breathing poor air as the result of that is not off the mark," said Greenbaum, who runs the institute that is funded by both the EPA and the auto industry to serve as an independent arbiter of the science.[91]

89. The revelation of the scandal has led to numerous consequences in the United States. The DOJ is conducting a criminal probe of Volkswagen.[92] AGs in 30 states have initiated their own investigation.[93] A Texas judge has issued a temporary restraining order preventing the Class Vehicles from being sold within the state. *See* Exhibit 9 to the Complaint. The Subcommittee of Oversight & Investigations of the Energy & Commerce Committee of the United States House of Representatives has initiated an investigation and sent letters to Volkswagen and the EPA.[94] Horn has said he will testify before the committee on October 8.[95] Fred Upton, the chairman of the full committee, has stated that "[t]he very notion of a carmaker intentionally violating our environmental laws is beyond belief....[R]eports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated. Attempting to deceive regulators and customers is a double whammy of betrayal."[96] Nearly 200 private lawsuits have been filed, many of them class actions. Among those class actions, most involve class claims for individual statewide classes, as opposed to federal claims for nationwide classes.

90. Outside the United States, several countries are investigating Volkswagen's

[96] http://energycommerce.house.gov/press-release/suboversight-schedules-volkswagen-hearing-october-8.

conduct.[97] Switzerland has banned the sale within its borders of certain Volkswagen TDI Diesel cars sold in Europe.[98] Prosecutors in Paris have launched an investigation for suspected "aggravated" deception of affected vehicles sold in France; French Environment Minister Segolene Royal called Volkswagen's conduct "a form of theft from the taxpayer and the state."[99] The Italian antitrust authority has also commenced an investigation, saying "Volkswagen's claims about emissions and certifications in advertising campaigns and information brochures distributed by dealers might have induced consumers to make an error in their choice."[100]

91. As noted above, Volkswagen has set aside $7.2 billion to deal with the costs of the scandal. That will not be nearly enough. James E. Tierney, a former AG in Maine, has been quoted as saying that the costs to Volkswagen might be "'incalculable,' with each false advertisement to consumers, for example, carrying a potential penalty. 'This product was designed to operate illegally, and that is very serious.'"[101]

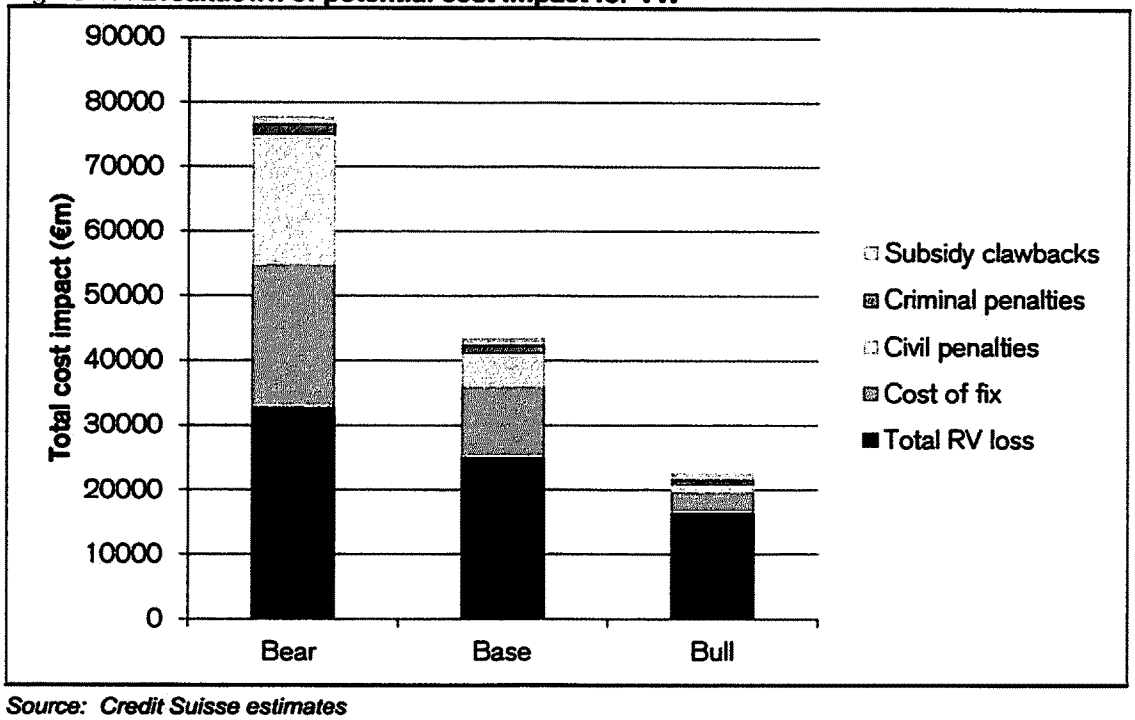
[101] http://mobile.nytimes.com/2015/10/03/business/us-states-jumping-into-investigation-of-vw-emissions-deception.html?_r=0&referer=https://www.google.com/.

92. Nonetheless, some attempts at calculation have been made. On October 2, Credit Suisse disseminated an analysis showing Volkswagen's anticipated costs in a "bull" scenario (where events turned out favorably to it), a "base" scenario, and a "bear" scenario (where events turned out unfavorably).[102] The "bull" scenario was $25.6 billion in costs, while the "bear" scenario was $87.1 billion. The analysis is summarized in the following chart:

Figure 17: **Breakdown of potential cost impact for VW**



Source: Credit Suisse estimates

As can be seen, costs associated with criminal and civil penalties make up a significant portion of the differing amounts. Credit Suisse also predicts that Volkswagen's stock may decline another 20%.

VI. CLASS ACTION ALLEGATIONS.

93. Plaintiffs bring this action both on behalf of themselves, and as a class action pursuant to Federal Rules of Civil Procedure 23(a) and (b)(3), on behalf of the following class (the

[102] http://www.businessinsider.com/credit-suisse-volkswagen-shares-could-fall-another-20-2015-10?r=UK&IR=T.

VW FOIA, EPA 06/20/2017 2017-FFP_031023

"Class").

> All persons and entities who purchased or leased a Class Vehicle from a Volkswagen Authorized Dealer in the United States. Excluded from the Class are Defendants, their parent companies, subsidiaries and affiliates, any co-conspirators, all governmental entities, and any judges or justices assigned to hear any aspect of this action.

The Class includes subclasses of persons located in California and Virginia. These will be referred to herein as the "California Subclass" and the "Virginia Subclass."

94. Plaintiffs do not know the exact number of Class and Subclass members but believe based on published reports that there are more than 482,000 Class members, geographically dispersed throughout the United States such that joinder of all class members is impracticable. The identity of Class members can be determined from the internal records of Volkswagen.

95. Plaintiffs' claims are typical of the claims of the Class and Subclasses in that Plaintiffs purchased or leased a Class Vehicle from a Volkswagen Authorized Dealer in the United States. All Class and Subclass members were damaged by the same wrongful conduct of Defendants and their co-conspirators as alleged herein, and the relief sought is common to the class.

96. Common questions of law and fact predominate over any individual questions. These questions include, but are not limited to:

- Whether Volkswagen unlawfully acquired a monopoly in the Clean Diesel Car Market;
- Whether the Clean Diesel Car Market is a properly defined product market for purposes of Section 2 of the Sherman Act;
- Whether Volkswagen's acquisition and/or maintenance of a monopoly in the Clean Diesel Car Market had the effect of increasing to supracompetitive levels the retail prices of Class Vehicles;
- Whether Volkswagen violated the CAA and applicable regulations;
- Whether Volkswagen violated California Pollution Control laws and applicable

regulations;

- Whether Volkswagen's conduct violated RICO;
- Whether the Volkswagen RICO Enterprise as defined herein is a cognizable RICO enterprise;
- Whether Volkswagen committed federal mail and wire fraud, thus establishing predicate acts under RICO:
- Whether Volkswagen engaged in a pattern of racketeering activity;
- Whether Plaintiffs and Class members were injured in their business or property, and, if so, what is the appropriate measure of their damages;
- Whether Volkswagen misrepresented the environmental impact of its Class Vehicles;
- Whether Volkswagen misrepresented the Class Vehicles' emission standards compliance, fuel efficiency or performance;
- Whether Volkswagen violated the Magnuson-Moss Warranty Act;
- Whether Volkswagen violated California's Consumer Legal Remedies Act;
- Whether Volkswagen violated California's Unfair Competition Law;
- Whether Volkswagen violated California's False Advertising Law;
- Whether Volkswagen violated Virginia's Consumer Protection Law;
- Whether Volkswagen committed fraudulent concealment;
- Whether Volkswagen was unjustly enriched;
- Whether Plaintiffs and the other members of the Class and Subclasses were injured by Defendants' conduct, and, if so, the appropriate classwide measure of damages for Class members; and
- The scope of any injunctive and other equitable relief to which Plaintiffs and the other members of the Class and Subclasses are entitled.

97. These and other questions of law and fact are common to the Class and Subclasses

VW FOIA, EPA 06/20/2017 2017-FFP_031025

predominate over any questions affecting only individual Class members.

98. Plaintiffs' claims are typical of the claims of the Class and Subclasses because Plaintiffs purchased a Class Vehicle from a Volkswagen Authorized Dealer in the United States.

99. Plaintiffs will fairly and adequately represent the interests of the Class and Subclasses in that they have no conflict with any other members of the Class and Subclasses. Furthermore, Plaintiffs have retained competent counsel experienced in antitrust, class action, and other complex litigation.

100. Defendants have acted on grounds generally applicable to the Class, thereby making final injunctive relief appropriate with respect to the Class and Subclasses as a whole.

101. This class action is superior to the alternatives, if any, for the fair and efficient adjudication of this controversy. Prosecution as a class action will eliminate the possibility of repetitive litigation. There will be no material difficulty in the management of this action as a class action. The prosecution of separate actions by individual Class and Subclass members would create the risk of inconsistent or varying adjudications, establishing incompatible standards of conduct for Defendants.

CAUSES OF ACTION

FIRST CLAIM

Violation of the Section 2 of the Sherman Antitrust Act (Monopolization) (15 U.S.C. § 2).

102. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

103. The relevant product market for purposes of Plaintiffs' claims under Section 2 of the Sherman Act is the Clean Diesel Car Market, which, as noted above, consists of: (a) the product market of Clean Diesel passenger cars and (b) a geographic market consisting of the United States. All diesel fuel sold in the United States during the relevant period is "clean diesel fuel", with 97% less sulfur than the diesel sold in the 1970s. Similarly, all diesel cars sold in the United States since 2007 (which have had to meet the same emission standards as gasoline engines) have advanced engines and emissions control technology that make the diesel engines cleaner than in

VW FOIA, EPA 06/20/2017 2017-FFP_031026

the past, are able to take advantage of the clean diesel fuel, and use exhaust systems that further reduce diesel engine emissions.

104. As Volkswagen's own market research and market research by others described above have demonstrated, clean diesel cars are not in the same relevant market as gasoline or even hybrid cars of similar size and class. Diesel engines require the use of a different and more expensive fuel than gasoline-powered engines, can travel much greater distances on a single tank of fuel, and are more expensive. Unlike hybrid or electric vehicles, diesel-powered vehicles do not have to be plugged in, can travel greater distances without refueling or plugging in, and -- particularly with more recent compression technology like the Volkswagen's TDI engines -- have greater torque, acceleration, and towing power. In addition, the demographics of the clean diesel buyers are distinct from those of hybrid buyers; they are more likely to be male, younger, and less likely to have children.

105. At all relevant times, Volkswagen has been a competitor in the Clean Diesel Car Market, and has maintained significant market share. As the chart presented by Skorupski of VWoA depicted above demonstrates, Volkswagen's share of the Clean Diesel Car Market has been 70% or more during the entire relevant period.

106. Barriers to entry in the Clean Diesel Car Market are high. In addition to the barriers to entry and expansion posed by Volkswagen's anticompetitive conduct, as described in this Complaint, other barriers to entry include: high research and development costs, high costs of making diesel engines that are EPA- and CARB-compliant, and high capital costs.

107. Consumers, experts and commentators in the automotive industry, and the automobile manufacturers themselves, including Volkswagen, all recognize the Clean Diesel Car market as distinct from markets including gasoline, hybrid, or electric cars.

108. Volkswagen has monopoly power in the Clean Diesel Car Market.

109. Through the anticompetitive use of the defeat device and its deception of the EPA, CARB, Plaintiffs, and the Class, Volkswagen has willfully acquired and/or maintained its

VW FOIA, EPA 06/20/2017 2017-FFP_031027

monopoly of the Clean Diesel Car Market. This conduct has harmed competition in that market, and has caused injury to every person that purchased or leased a Class Vehicle. The purchase or lease price was higher than it would have been in a competitive market; the supply and selection of products was lower than it would have been in a competitive market; innovation has been stifled; and the number and effectiveness of competitors in that Market has been diminished by unlawful means.

110. As a result of this violation of law, the price of Class Vehicles was higher than it otherwise would have been.

111. There is no legitimate business justification for the conduct described in this Complaint which has facilitated Volkswagen's monopolization of the Clean Diesel Car Market.

112. The anticompetitive conduct described in this Complaint has caused injury to the business or property of Plaintiffs and members of the Class and is in violation of section two the Sherman Act (15 U.S.C. § 2).

113. Plaintiffs are buyers of Class Vehicles in the Clean Diesel Car Market; they are thus direct participants in the monopolized market. Volkswagen issues warranties directly to Class Vehicle buyers. The Volkswagen Authorized Dealers[103] obtain Class Vehicles from Volkswagen (through its American subsidiaries) that are certified to be EPA- and/or CARB-compliant and, as noted above, have visible stickers to that effect. The emissions testing that is used to justify those certifications is undertaken by VWoA in the United States.[104] Class Vehicles so labeled are

[103] In a recent recall notice unrelated to Dieselgate, Volkswagen has indicated that it has 652 authorized dealers in the United States. https://media.vw.com/doc/1456/volkswagen_issues_voluntary_recall-tiguan_label_recall_release-17883691505565f01ccc4bb.pdf. Their names and addresses can be identified through Volkswagen's records. The Volkswagen Authorized Dealers have a 12-person National Dealer Advisory Council that interacts closely with VWoA on such issues as company management.

[104] http://www.manufacturing.net/news/2015/10/vw-pollution-test-site-under-scrutiny-amid-emissions-cheating-scandal.

displayed on the showroom floors of Volkswagen Authorized Dealers. The false certifications by Volkswagen were one of the critical elements of its unlawful scheme of monopolization. The Volkswagen Authorized Dealers were agents of Volkswagen for the purpose of disseminating these false certifications and representations by Volkswagen to customers in order to induce them to purchase TDI Clean Diesel vehicles. In addition, Volkswagen (through its American subsidiaries) sets the Manufacturer's Suggested Retail Price ("MSRP") for Class Vehicles, which includes the premium for the TDI Clean Diesel technology described herein. While Volkswagen Authorized Dealers could charge customers a price less than the MSRP (such as when Volkswagen provides rebates or short-term retail promotions), that lesser price is nonetheless keyed off the MSRP and still contains a portion of the premium for the sham TDI Clean Diesel technology. This case involves retail prices for Class Vehicles paid by consumers like plaintiffs, who are participants in the relevant market and who pay more for those vehicles because of Volkswagen's illegal monopolistic practices.

SECOND CLAIM

Violation of Section 2 of the Sherman Antitrust Act (Attempted Monopolization) (15 U.S.C. § 2).

114. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

115. Volkswagen has acted with specific intent to monopolize the Clean Diesel Car Market as described above through the anticompetitive use of the defeat device and its deception of the EPA, CARB, Plaintiffs, and the Class.

116. There was and is a dangerous probability that Volkswagen will succeed in its attempt to monopolize the Clean Diesel Car Market because Volkswagen controls a large percentage of that market and has the ability to and actually did exclude competitors through the anticompetitive conduct described in this Complaint.

117. Volkswagen's conduct has harmed competition in the Clean Diesel Car Market, making the supply and selection of available Clean Diesel Cars lower than it would be in a competitive market.

VW FOIA, EPA 06/20/2017 2017-FFP_031029

118. There is no legitimate business justification for the conduct described in this Complaint which has facilitated Volkswagen's monopolization of the Clean Diesel Car Market.

119. The anticompetitive conduct described in this Complaint has caused injury to the business or property of Plaintiffs and members of the Class and is in violation of the Sherman Act (15 U.S.C. § 2).

THIRD CLAIM

Violation of the Racketeer Influenced and Corrupt Organizations Act ("RICO") (18 U.S.C. §§ 1962(c), 1964).

120. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

121. Each Plaintiff is a "person" within the meaning of 18 U.S.C. § 1964(c), and each has sustained injury to his or her business or property as a result of Volkswagen's conduct described in this Complaint.

122. Each Defendant is a "person" within the meaning of 18 U.S.C. § 1961(3).

123. Defendants violated 18 U.S.C. §1962(c) by participating in or conducting the affairs of the Volkswagen RICO Enterprise through a pattern of racketeering activity.

124. For the past seven years, Volkswagen has engaged in a deliberate, pre-meditated and continuous effort to deceive Plaintiffs, members of the Class, and federal and state regulators into believing that the Class Vehicles are environmentally-friendly, fuel-efficient, and EPA- and CARB-compliant. Unknown to Plaintiffs, Class members and federal and state regulators, Volkswagen installed pollution control defeat devices into the Class vehicles that turned off the pollution controls when the cars were in normal operating mode.

125. Plaintiffs and Class members had no way of knowing that these systems were disabled by Volkswagen. Pursuant to the CAA, Volkswagen was required to equip its cars with on-board diagnostic systems that trigger a dashboard "check engine" light that alerts the driver of a possible pollution control device malfunction. The Class Vehicles' diagnostic systems did not trigger this "check engine light," because the defeat device was designed to evade EPA and CARB pollution controls.

VW FOIA, EPA 06/20/2017 2017-FFP_031030

126. In dozens of advertising campaigns and statements and in certifications of EPA and CARB compliance Volkswagen has falsely represented the Class Vehicles' "green credentials" and performance.

127. Volkswagen engaged in a common course of conduct and conspiracy with the common purpose of defrauding Plaintiffs and members of the Class into purchasing Class Vehicles at artificially inflated prices.

The Volkswagen RICO Enterprise.

128. Volkswagen conducted the affairs of an association-in-fact enterprise (the "Volkswagen RICO Enterprise") through a pattern of racketeering activity, in violation of 18 U.S.C. § 1962(c).

129. The enterprise engaged in and continues to engage in interstate commerce, and its activities affect interstate commerce.

130. The Volkswagen RICO Enterprise is an association-in-fact enterprise comprised of the Defendants and Volkswagen Authorized Dealers in the United States. Each participant in the Enterprise played a designated, well-defined role in the affairs of the Volkswagen RICO Enterprise.

131. Volkswagen designed, manufactured, and sold to Volkswagen Authorized Dealers the Class Vehicles containing the defeat devices that are the subject of this Complaint. Volkswagen developed the advertising campaigns that misrepresented to Plaintiffs and Class members the true nature of the Class Vehicles, which were not, contrary to Defendants' misrepresentations, environmentally-friendly, fuel-efficient, or EPA- or CARB-compliant. Volkswagen deceptively certified the Class Vehicles as EPA- and CARB-compliant. And Volkswagen lied to CARB and EPA officials about the full nature and extent of the problem.

132. The Volkswagen Authorized Dealers that sold and leased the Class Vehicles to Plaintiffs and members of the Class were a critical element of the Volkswagen RICO Enterprise. Volkswagen sold the Class Vehicles to Volkswagen Authorized Dealers, who then sold or leased

VW FOIA, EPA 06/20/2017 2017-FFP_031031

them to Plaintiffs and members of the Class. Whether or not the Volkswagen Authorized Dealers knew that the Class Vehicles contained defeat devices that made Volkswagen's advertisements and representations false, the Volkswagen Authorized Dealers displayed those advertisements and repeated those misrepresentations. Indeed, Volkswagen required Volkswagen Authorized Dealers to display and repeat those misrepresentations in the Volkswagen and Audi Standard Dealer Agreements.

133. The Volkswagen RICO Enterprise has an ascertainable structure and purpose beyond the scope and commission of Volkswagens' predicate acts and conspiracy to commit such acts. The Enterprise is separate and distinct from Defendants, and functions as a continuing unit. The members of the Enterprise have distinct and separate roles and responsibilities.

134. At all relevant times, Volkswagen operated, controlled or managed the Volkswagen RICO Enterprise. Volkswagen's participation was critical for the success of the scheme to defraud because Volkswagen manufactured the Class Vehicles, designed and installed the defeat devices, and concealed those devices from Plaintiffs, Class members and regulatory authorities.

135. Section 1961(1)(B) of RICO defines "racketeering activity" as any act indictable under 18 U.S.C. §§1341 (mail fraud) and 1343 (wire fraud), among other statutes. As described in this Complaint, Volkswagen's conduct violated both of these laws.

136. Volkswagen conducted the affairs of the Volkswagen RICO Enterprise through a "pattern of racketeering activity," as defined by 18 U.S.C. §1961(5) by committing at least two acts of racketeering activity, *i.e.*, indictable violations of 18 U.S.C. §§1341 and 1343, within the past ten years. In fact, Volkswagen has committed dozens of acts of racketeering activity. Each racketeering act was related, had a similar purpose, involved the same or similar participants and method of commission, had similar results and impacted similar victims, including the Plaintiffs and members of the Class.

137. Defendants' multiple acts of racketeering activity were related to each other and amount to continued racketeering activity, and therefore constitute a "pattern of racketeering

VW FOIA, EPA 06/20/2017 2017-FFP_031032

activity" as defined in 18 U.S.C. §1961(5).

Predicate Act Violations of 18 U.S.C. §§1341 and 1343.

138. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §1341 (mail fraud), placed in post offices and/or in authorized repositories, matter and things to be sent or delivered by the U.S. Postal Service, caused matter and things to be delivered by commercial interstate carriers, and received matter and things from the U.S. Postal Service and/or commercial interstate carriers, including, but not limited to, advertising materials, marketing and sales materials, correspondence, contracts, sales and leasing documents, Certificates of Compliance, communications with the EPA, CARB and other regulatory officials, and other materials relating to the Class Vehicles sold and leased to Plaintiffs and Class members.

139. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §1343 (wire fraud), transmitted and received by wire, matter and things, which include, but are not limited to, advertising materials, marketing and sales materials, correspondence, contracts, sales and leasing documents, Certificates of Compliance, communications with the EPA, CARB, and other regulatory officials, and other materials relating to the Class Vehicles sold and leased to Plaintiffs and Class members.

140. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §§1341 and 1343, made numerous material misrepresentations about the Class Vehicles' environmental impact, fuel efficiency, and EPA- and CARB-compliance, and made many material omissions of fact, including concealing that the cars contained defeat devices that rendered them non-compliant with applicable emissions standards. Volkswagen made these misrepresentations and omissions with the intent and effect of inducing Plaintiffs to rely on such misrepresentations and omissions.

141. Defendants' misrepresentations, omissions of material facts, acts of concealment, and failures to disclose, were knowing and intentional, and made for the purpose of deceiving

VW FOIA, EPA 06/20/2017 2017-FFP_031033

Plaintiffs and Members of the Class into purchasing and leasing Class Vehicles.

142. Defendants either knew or recklessly disregarded the fact that the misrepresentations and omissions described above and incorporated herein were material, and Plaintiffs and Class members relied on the misrepresentations and omissions as set forth above.

143. Volkswagen's affirmative and deliberate misrepresentations regarding the Class Vehicles' environmental friendliness, fuel efficiency and performance, and omission of the true facts, were material factors in inducing Plaintiffs and Class members to purchase and lease the Class Vehicles. Plaintiffs and Class members relied on those misrepresentations and omissions and would have not purchased or leased the vehicles in their absence, or, at a minimum, would have paid significantly less than they did.

144. Each act of deception, as described in this Complaint, constitutes a violation of 18 U.S.C. §§1341 (mail fraud) or 1343 (wire fraud), and constitutes an act of "racketeering activity" as defined in 18 U.S.C. §1961(5).

145. As a result, Plaintiffs and Class members have been injured in their business and property within the meaning of 18 U.S.C. §1964(c). Plaintiffs' and Class members' damages include, but are not limited to: purchasing or leasing Class Vehicles that they would not otherwise have purchased or leased; paying more for Class Vehicles than they would have otherwise paid if they had known the true facts concerning the defeat devices; and purchasing Class Vehicles, the value of which has been severely diminished, thus reducing their residual and/or resale value.

146. Volkswagen's RICO violations directly and proximately caused injury to the business and property of Plaintiffs and Class members, and Plaintiffs and Class members are entitled to three times their actual damages, as well as injunctive and other equitable relief, plus their costs and reasonable attorneys' fees.

FOURTH CLAIM

Violation of the Magnuson-Moss Warranty Act (15 U.S.C.§ 2301 *et seq.*)

147. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

VW FOIA, EPA 06/20/2017 2017-FFP_031034

148. Plaintiffs and the Class bring this claim under the Magnuson-Moss Warranty Act, 15 U.S.C. § 2301 *et seq.*

149. The Class Vehicles are consumer products as defined in 15 U.S.C. §2301(1).

150. Volkswagen is a supplier and warrantor as defined in 15 U.S.C. §2301(4), (5).

151. Plaintiffs and the Class received written warranties as defined in 15 U.S.C. §2301(6)(A) and/or (B), which Volkswagen has breached.

152. Plaintiffs and the Class are "consumers" as defined in 15 U.S.C. §2301(3). They are consumers because they bought a Class Vehicle and are entitled to enforce both written and implied warranties.

153. Pursuant to 15 U.S.C. § 2310(e), Plaintiffs and the Class are not required to provide Defendants notice of this class action and an opportunity to cure until the time the Court determines the representative capacity of Plaintiffs pursuant to Fed.R.Civ.P. 23.

154. Volkswagen is liable to Plaintiffs and the Class pursuant to 15 U.S.C. § 2310(d)(l) because it breached its written warranties.

155. Further, in connection with the sale of the Class Vehicles, Volkswagen gave an implied warranty under the Act. As part of that implied warranty, Volkswagen warranted that the Class Vehicle complied with all applicable federal and state regulations, including emission regulations. Volkswagen breached the implied warranty of merchantability.

156. Plaintiffs and the Class are entitled to damages caused by Volkswagen's breaches of the warranties, including economic damages based upon either a return of Plaintiffs' and Class Members purchase price; and/or the difference between the price paid for the Class Vehicle as warranted and the actual value of the Class Vehicle as delivered, and consequential damages.

157. In addition, Plaintiffs and the Class are entitled to reasonable attorneys' fees and costs as determined by the Court.

VW FOIA, EPA 06/20/2017 2017-FFP_031035

FIFTH CLAIM

Violations of the Consumers Legal Remedies Act (California Civil Code § 1750 *et seq.*)

158. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

159. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

160. This cause of action is brought pursuant to the California Consumers Legal Remedies Act ("CLRA"), Civil Code §1750, *et seq*. Plaintiffs bring this action on their own behalf and on behalf of the California Subclass, all of whom are similarly situated consumers within the meaning of Civil Code §1781.

161. The acts and practices described in this Complaint were intended to result in the sale of goods, specifically a motor vehicle, in consumer transactions. Volkswagen has violated, and continue to violate California Civil Code § 1770, subdivisions (a)(9), (a)(7), (a)(16), and (a)(5) by:

- Representing to consumers purchasing the Class Vehicles that these vehicles' emissions, fuel efficiency and high performance are as advertised and publicized.
- Representing in their advertising emissions, environmental, fuel efficiency and performance characteristics for the Class Vehicles that are false.

162. Plaintiffs Bourn, Watson, and Verner and the California Subclass members have suffered harm as a result of these violations.

163. Plaintiffs Bourn, Watson, and Verner and California Subclass members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Class Vehicles believing, based on Volkswagen's representations, that the Class Vehicles had certain characteristics that made them environmentally friendly, fuel efficient and high performance, when in fact these vehicles cannot have these fuel efficient and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Class Vehicles and the subsequent revelation

VW FOIA, EPA 06/20/2017 2017-FFP_031036

concerning the "defeat devices" will result in lower resale value.

164. Volkswagen concealed from Plaintiffs Bourn, Watson, and Verner accurate information concerning the emissions standards, fuel efficiency and performance of the California Subclass Vehicles.

165. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were intentional, or alternatively, made without the use of reasonable procedures adopted to avoid such errors.

166. Volkswagen, directly or indirectly, has engaged in substantially similar conduct with respect to Plaintiffs Bourn, Watson, and Verner and to each member of the California Subclass.

167. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, members of the consuming public will be further damaged by Volkswagen's conduct.

168. Plaintiffs Bourn, Watson, and Verner and the Class are entitled to equitable relief on behalf of the members of the California Subclass in the form of an order, pursuant to Civil Code §1780, subdivision (a)(2)-(5), prohibiting Volkswagen from continuing to engage in the above-described violations of the CLRA. Plaintiffs Bourn, Watson, and Verner and the California Subclass further seek reasonable attorneys' fees under Civil Code §1780(e).

SIXTH CLAIM

Violation of California Unfair Competition Law (Cal. Bus. & Prof. Code § 17200, *et seq.*)

169. Plaintiffs Bourn, Watson, and Verner incorporate by reference each preceding and succeeding paragraph.

170. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

171. California Business & Professions Code §17200, *et seq.* prohibits acts of "unfair competition" which is defined by California Business & Professions Code § 17200 as including

VW FOIA, EPA 06/20/2017 2017-FFP_031037

any "any unlawful, unfair or fraudulent business act or practice ...."

172. Volkswagen has violated and continues to violate California Business & Professions Code §17200's prohibition against engaging in "unlawful" business acts or practices, by, inter alia, the following:

- Violating the CAA and applicable regulations;
- Violating California's Air Pollution Control laws and applicable regulations;
- Violating the Sherman Act;
- Violating RICO;
- Violating the Magnuson-Moss Act;
- Violating the CLRA; and
- Violating California's False Advertising Law.

173. Volkswagen also acted fraudulently and unfairly for purposes of section 17200. Volkswagen's misrepresentations and omissions regarding the Class Vehicles' emissions, environmental standards, fuel efficiency, and performance in their advertising, public statements and marketing were a material factor in inducing Plaintiffs Bourn, Watson, and Verner to purchase their Class Vehicle. Plaintiffs Bourn, Watson, and Verner suffered injury in fact and lost money and/or property as a result of Volkswagen's unlawful business acts and practices and California Subclass members have suffered harm when each was required to pay a purchase price for their Class Vehicles which they never would have purchased if the true facts were known; or paid a price in excess of what a California Subclass member would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics and in the form of decreased resale value of the Vehicles.

174. As a result of Volkswagen's violations of the California Business & Professions Code §17200, *et seq.*, Plaintiffs Bourn, Watson, and Verner and California Subclass members are entitled to equitable relief in the form of full restitution for the inflated sale price of the Vehicles.

VW FOIA, EPA 06/20/2017 2017-FFP_031038

175. Plaintiffs Bourn, Watson, and Verner and California Subclass members also seek an order enjoining Volkswagen from continuing their unlawful business practices and from such future conduct.

SEVENTH CLAIM

Violation of the California False Advertising Law (Cal. Bus. & Prof. Code § 17500, *et seq.*)

176. Plaintiffs Bourn, Watson, and Verner incorporate by reference each preceding and succeeding paragraph.

177. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

178. Volkswagen violated California's False Advertising Law, Business & Professions Code §17500, *et seq.*by using false and misleading messages regarding the environmental friendliness, emissions, fuel efficiency and performance of the Class Vehicles in television, print, and Internet advertising.

179. These representations and/or omissions have deceived and are likely to deceive Plaintiffs Bourn, Watson, and Verner, the California Subclass, and consumers across the country in connection with their decision to purchase Class Vehicles. Volkswagen's representations and/or omissions were material and constituted a substantial and material factor in Plaintiffs Bourn and Watson's decision to purchase their Class Vehicle. Had Plaintiffs Bourn, Watson, and Verner known the actual facts, they would not have purchased the Class Vehicles and/or paid more than they would have had Volkswagen accurately disclosed the Class Vehicles' true characteristics.

180. Volkswagen directly and indirectly, has engaged in substantially similar conduct with respect to each Plaintiff and to each member of the California Subclass.

181. Plaintiffs Bourn, Watson, and Verner suffered injury in fact and lost money and/or property as a result of Volkswagen's false and misleading advertising and California Subclass members suffered harm when each was required to pay a purchase price in excess of what a

VW FOIA, EPA 06/20/2017 2017-FFP_031039

California Subclass member would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics and in the form of decreased resale value of the Class Vehicles.

182. As a result of Volkswagen's violations, Plaintiffs Bourn, Watson, and Verner and California Subclass members are entitled to equitable relief in the form of full restitution of all monies paid for the sales price of the Vehicles, diminished value of the Class Vehicles, and/or disgorgement of the profits derived from Volkswagen's false and misleading advertising.

183. Plaintiffs Bourn, Watson, and Verner also seek an order enjoining Volkswagen from such future conduct.

EIGHTH CLAIM

Violation of the Virginia Consumer Protection Act (Va. Code Ann. §§59.1-196, *et seq.*)

184. Plaintiff Schumacher incorporates by reference each preceding and succeeding paragraph.

185. Plaintiff Schumacher brings this Claim on behalf of the Virginia Subclass, which is cognizable in this Court pursuant to *Shady Grove Orthopedic Assocs., P.A. v. Allstate Ins. Co.*, 559 U.S. 393 (2010).

186. Defendants are "persons" within the meaning of Va. Code Ann. §59.1-200(A).

187. Volkswagen violated the Virginia Consumer Protection Act, which prohibits "...(5) misrepresenting that goods or services have certain quantities, characteristics, ingredients, uses, or benefits; (6) misrepresenting that goods or services are of a particular standard, quality, grade, style, or model; ... (8) advertising goods or services with intent not to sell them as advertised ...; [and] (14) using any other deception, fraud, false pretense, false promise, or misrepresentation in connection with a consumer transaction[.]" Va. Code Ann. §59.1-200(A).

188. These representations and/or omissions have deceived and are likely to deceive Plaintiff Schumacher, the Virginia Subclass, and consumers across the country in connection with their decision to purchase Class Vehicles. Volkswagen's representations and/or omissions were material and constituted a substantial and material factor in Plaintiff Schumacher's decision to

purchase their Class Vehicle. Had Plaintiff Schumacher and Virginia Subclass members known the actual facts, they would not have purchased the Class Vehicles and/or would have paid less for them.

189. Volkswagen, directly and indirectly, has engaged in substantially similar conduct with respect to each Plaintiff and to each member of the Virginia Subclass.

190. Plaintiff Schumacher and Virginia Subclass members suffered injury in fact and lost money and/or property as a result of Volkswagen's Violations of the Virginia Consumer Protection Act. Plaintiff Schumacher and Virginia Subclass members suffered harm when each was required to pay a purchase price in excess of what they would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics; they also suffered harm in the form of decreased resale value of the Class Vehicles.

191. As a result of Volkswagen's violations, Plaintiff Schumacher and Virginia Subclass members are entitled to three times the amount of actual damages or $1000, whichever is greater, as well as costs and attorneys' fees. Va. Code Ann. §§59.1-204(a), (b).

NINTH CLAIM
Unjust Enrichment

192. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

193. Plaintiffs bring this claim for unjust enrichment on behalf of the nationwide Class under the common law of unjust enrichment, as there are no true conflicts (case-dispositive differences) among various states' laws of unjust enrichment.

194. In the alternative, Plaintiffs bring this claim on behalf of the nationwide Class under Virginia law, because the Defendants' United States operations are headquartered in Virginia and Virginia has the most significant relationship to the issues and facts relevant to this claim.

195. Volkswagen received and retained a benefit from the Plaintiffs and inequity has resulted.

196. Volkswagen benefitted through its unjust conduct, by selling Class Vehicles subject

VW FOIA, EPA 06/20/2017 2017-FFP_031041

to the misrepresentation that they were EPA- and/or CARB-compliant and by failing to disclose its use of a defeat device in these vehicles.

197. Plaintiffs, were charged a premium based on this misrepresentation, overpaid for these vehicles as a result, and/or would not have purchased these vehicles at all had their noncompliance with federal and state emissions laws been disclosed.

198. It is inequitable for Volkswagen to retain these benefits.

199. Plaintiffs do not have an adequate remedy at law.

200. As a result of Volkswagen's conduct, the amount of its unjust enrichment should be disgorged, in an amount to be proven at trial.

TENTH CLAIM
Unjust Enrichment

201. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

202. Plaintiffs bring this claim for unjust enrichment on behalf of the nationwide Class under the common law of fraudulent concealment, as there are no true conflicts (case-dispositive differences) among various states' laws of fraudulent concealment.

203. In the alternative, Plaintiffs bring this claim on behalf of the nationwide Class under Virginia law, because the Defendants' United States operations are headquartered in Virginia and Virginia has the most significant relationship to the issues and facts relevant to this claim.

204. Volkswagen concealed and suppressed the material facts that the Class Vehicles did not comply with federal and state emissions laws and were spewing illegal amounts of NOx when they were represented to be EPA- and/or CARB-compliant. It also concealed and suppressed the material fact that the Class Vehicles were equipped with a defeat device that prevented their proper testing under laboratory conditions for compliance with federal and state emissions laws and regulations.

205. Volkswagen took the various steps described herein to effectuate that concealment, such as false advertising and in false statements of compliance with federal and state emissions

VW FOIA, EPA 06/20/2017 2017-FFP_031042

laws and regulations affixed to each of the Class Vehicles

206. Volkswagen took steps to ensure that its employees did not reveal these concealed facts to federal and state environmental regulators.

207. Volkswagen had a duty to disclose the concealed information because it:

- Had exclusive and/or far superior knowledge and access to the facts than Plaintiffs and Class Members, and it knew the facts were not known to or reasonably discoverable by Plaintiffs and the Class;
- Intentionally concealed the foregoing from Plaintiffs; and
- Made incomplete representations about the compliance of the Class Vehicles with federal and state emissions laws and regulations, while purposefully withholding material facts from Plaintiffs that contradicted these representations.

208. These omitted and concealed facts were material because they would be relied on by a reasonable person purchasing, leasing or retaining the Class Vehicles, and because they directly impact the price paid for the Class Vehicles and their resale value. Whether the Class Vehicles comply with federal and state emissions laws and regulations is a material concern to a consumer. Plaintiffs and Class Members trusted Volkswagen not to sell or lease them vehicles that were non-compliant.

209. Volkswagen concealed and suppressed these material facts to falsely assure purchasers and consumers that the Class Vehicles complied with federal and state emissions laws and regulations, as represented by Volkswagen and reasonably expected by consumers.

210. Volkswagen actively concealed and/or suppressed these material facts, in whole or in part, to protect its profits and to avoid recalls that would hurt the brand image of the Class Vehicles and cost Volkswagen money. Volkswagen concealed these facts at the expense of Plaintiffs and the Class.

211. Plaintiffs and the Class were unaware of these omitted material facts, and would not have acted as they did if they had known of the concealed and/or suppressed information.

VW FOIA, EPA 06/20/2017 2017-FFP_031043

212. Had they been aware of the non-compliance of the Class Vehicles with federal and state emissions laws and regulations and Volkswagen's callous disregard for those laws and regulations, Plaintiffs and the Class either would have paid less for their Class Vehicles or would not have purchased or leased them at all. Plaintiffs did not receive the benefit of their bargain as a result of Volkswagen's fraudulent concealment.

213. Because of the concealment and/or suppression of the facts, Plaintiffs and the Class sustained damage because they own vehicles that diminished in value as a result of Volkswagen's concealment of, and failure to timely disclose, the non-compliance of the Class Vehicles with federal and state emissions laws and regulations.

214. The value of all Class members' Class Vehicles has diminished as a result of Volkswagen's fraudulent concealment of the non-compliance of the Class Vehicles with federal and state emissions laws and regulations and has made any reasonable consumer reluctant to purchase any of the Class Vehicles, let alone pay what otherwise would have been fair market value for the vehicles.

215. Accordingly, Volkswagen is liable to the Class for their damages in an amount to be proven at trial.

216. Volkswagen's acts were done maliciously, oppressively, deliberately, with intent to defraud, and in reckless disregard of Plaintiffs' and the Class's rights and well-being, and with the aim of enriching Volkswagen. Volkswagen's conduct, which exhibits the highest degree of reprehensibility, being intentional, continuous, placing others at risk of death and injury, and affecting public safety, warrants an assessment of punitive damages in an amount sufficient to deter such conduct in the future, which amount is to be determined according to proof.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray that the Court enter judgment on their behalf and on behalf of the Class and the California and Virginia Subclasses, and:

A. Order the appointment of an independent External Compliance Monitor to monitor

VW FOIA, EPA 06/20/2017 2017-FFP_031044

Volkswagen's compliance with federal and state environmental laws;

B. Order Volkswagen to pay a portion of its annual net profits into an independent fund administered by third parties approved by the Court who can disburse the funds to non-profit organizations that seek to monitor, educate people about, and/or remediate the deleterious environmental effects of vehicular diesel fuel emissions;

C. Order that this action may proceed as a class action, with Plaintiffs as the designated Class representatives for the Class; Plaintiffs Bourn, Watson, and Verner as designated Class representatives for the California Subclass; Plaintiff Schumacher as designated Class representative for the Virginia Subclass, and Plaintiffs' counsel as Class and Subclass Counsel;

D. Adjudge and decree that Volkswagen has violated the CAA, California Pollution Control laws, the Sherman Act, RICO, the Magnuson-Moss Act, the CLRA, California's Unfair Competition Law, California's False Advertising Law; the Virginia Consumer Protection Act, and the common law of unjust enrichment and fraudulent concealment and that Plaintiffs and the members of the Class and the California and Virginia Subclasses have been injured in their business and property as a result of Volkswagen's violations;

E. Order that Plaintiffs and the members of the National Class and California Subclass recover damages sustained by them, to the extent provided by law, and that a judgment in favor of Plaintiffs and the Class and the California and Virginia Subclasses be entered against Volkswagen in an amount to be trebled in accordance with such laws;

F. To the extent provided by law, enjoin and restrain Volkswagen, its subsidiaries, affiliates, successors, transferees, assignees and the respective officers, directors, partners, agents, and employees thereof and all other persons acting or claiming to act on their behalf from continuing to violate the CAA, California Pollution Control laws, the Sherman Act, RICO, the Magnuson-Moss Act, CLRA, California's Unfair Competition Law, California's False Advertising Law, the Virginia Consumer Protection Act, and the common law of unjust enrichment and fraudulent concealment;

VW FOIA, EPA 06/20/2017 2017-FFP_031045

G. Order Volkswagen to pay restitution or damages to Plaintiffs and members of the Class and the California and Virginia Subclasses and to disgorge the profits unlawfully acquired and retained by Volkswagen;

H. Award Plaintiffs and members of the Class and the California and Virginia Subclasses pre-judgment and post-judgment interest, and order that such interest be awarded at the highest legal rate from and after the date of service of the initial complaint in this action;

I. Award Plaintiffs and members of the Class and the California and Virginia Subclasses their costs of this suit, including reasonable attorneys' fees as provided by law; and

J. Order such other or further relief as may be just and proper.

IX. JURY TRIAL DEMAND.

Pursuant to Federal Rule of Civil Procedure 38(b), Plaintiffs demand a trial by jury of all of the claims asserted in this Complaint so triable.

20151020 EB Meeting Agenda FINAL.pdf

Good Afternoon Executive Board Members,

The agenda for the upcoming Oct 20, 2015 EB meeting is now available on MR and is located here: http://cafcpmembers.org/membersonly/eb_meeting_20151020.

RSVP: If you have not already, please let me know you are attending this IN –PERSON EB Meeting by **Friday Oct 16th**, or sooner.

We look forward to seeing everyone Oct 20.

Thank you,

Linda Carrizosa | Administrative Assistant | CaFCP

D 916 371 2870 | F 916 375 8005 | lcarrizosa@cafcp.org

3300 Industrial Blvd., Ste. 1000, West Sacramento, CA 95691 | www.cafcp.com

AGENDA

CaFCP Executive Board

October 20, 2015 8:30am–5:30pm
Location: Sacramento Metropolitan Air Quality Management District
777 - 12th St. 3rd Floor, Sacramento, California 95814

8:30am – 8:40am CaFCP Chair, Justin Ward	**1. Welcome** Welcome and remarks from the CaFCP Chair Decision Item: Approve April 14, 2015 decisions & assignments
8:40am – 9:20am First Element Fuels HydrogeNXT H2 Logic Mercedes	**2. CaFCP Members** Information item: Presentations from new CaFCP members and current members.
9:20am – 10:00am Anticipated Speakers: EPA SunLine AC Transit CaFCP	**3. Medium/Heavy-Duty and FCEB** Information item: Progress and milestones with fuel cell bus roll-out, including AC Transit's 20,000 operating hour milestone and SunLine's acquisition of additional "All-American" buses. Decision item: Review M/HD Action Plan to approve or modify direction.
10:00am – 10:30am	**BREAK**
10:30am – 12:00pm Anticipated Speakers: GO-Biz CaFCP	**4. Hydrogen Stations: Aligning Progress** With the first new retail stations beginning to come online, members and staff have identified gaps in assessing and communicating progress and status. This item identifies gaps and recommends solutions for closing them. Information item: Status of California's stations, commissioning process, CaFCP website and maps. Decision items: • Confirm CaFCP's role of communicating status. • Approve consensus definition for a retail station. • Approve recommendation for station types in CaFCP outreach materials. • Agree on approach for counting stations.
12:00pm – 1:15pm	**LUNCH (on own)**

VW FOIA, EPA 06/20/2017 2017-FFP_031050

1:15pm – 3:10pm Invited Speakers: ARB CEC CAEATFA H2USA First Element CALSTART GM	**5. Hydrogen Stations: Expanding the Network** The AB8 report suggests that CEC will fund approximately seven stations in 2015, with additional funding for O&M support. Expanding the network to 100 stations in California may take additional approaches. Other states also need funding mechanisms, attracting investors and bringing players to the table. Discussion items: • Potential public and private funding and incentives for California hydrogen stations. • Methods that can be shared with other states. Decision item: • Action items for CaFCP in 2016
3:10pm – 3:30pm	**BREAK**
3:30pm – 4:15pm CaFCP	**6. Building the Bigger Tent** In 2014, executive board directed CaFCP's executive director and steering team to modify the organization's structure to include more organization that are instrumental to a commercial market. Decision items: • Proposed changes to CaFCP's membership tiers and structure • Proposed changes to decision-making process • Transition plan
4:15pm – 4:45pm CaFCP	**7. Business items** • Progress by 2015 program plan • Approve 2016 program plan and budget • Confirm 2016 vice-chair nomination • Confirm 2016 meeting dates
4:45pm – 5:15pm Chair, Justin Ward	**8. Public comment period***
5:15pm – 5:30pm Chair, Justin Ward	**9. Meeting wrap up**

A "no-host bar" reception will be held immediately following meeting at Blue Prynt – 815 11th St, Sacramento, CA 95814

*** Public comment period**
The public comment period provides an opportunity for members of the public to address the executive board on subject matters within the interest of CaFCP. Each person will be allowed a maximum of three minutes to ensure that everyone has a chance to speak.

Agenda items may be taken out of order and times may vary from those listed in the agenda. The board may choose to limit public comment at the chair's discretion.

This meeting is open to the public and will not be available by phone. This facility is accessible to persons with disabilities. Deadline for requesting ADA modification is October 14, 2015. Meeting materials will be posted at www.cafcp.org. This facility is accessible by public transit. For transit information, call (916) 321-BUSS for Sacramento Regional Transit. website: http://www.sacrt.com/schedulesfares.stm. And California Transit link: http://www.apta.com/resources/links/unitedstates/Pages/CaliforniaTransitLinks.aspx

20151021 ST Meeting Agenda FINAL.pdf

Good Afternoon Steering Team Members,

The agenda for the upcoming Oct 21, 2015 ST meeting is now available on MR and is located here: http://cafcpmembers.org/membersonly/st_meeting_20151021.

RSVP: Please let me know your attendance for this IN-PERSON ST Meeting by **Friday, Oct 16, 2015.**

We look forward to seeing everyone Oct 21!

Thank you,

Linda Carrizosa | Administrative Assistant | CaFCP

D 916 371 2870 | F 916 375 8005 | lcarrizosa@cafcp.org

3300 Industrial Blvd., Ste. 1000, West Sacramento, CA 95691 | www.cafcp.com

AGENDA

CaFCP Steering Team meeting

October 21, 2015, 8:30am – 12:00pm, PST
CaFCP Headquarters
3300 Industrial Blvd, Suite 1000
West Sacramento, CA 95691

Agenda

- Next steps in CaFCP reorg
  - Operating protocols and other documents
  - Prospective members
  - Method of invitation
  - Transition timeline and plan
- 2016 Program Plan and Budget
  - Project review
  - Deliverables
  - Quarterly reporting

Grab and Go lunch available at 11:30

CLERK US DISTRICT COURT
ALEXANDRIA, VIRGINIA

IN THE UNITED STATES DISTRICT COURT
FOR THE EASTERN DISTRICT OF VIRGINIA
Alexandria Division

MARIA BOURN, DAVID WATSON, STEPHEN VERNER, and MARK SCHUMACHER, on behalf of themselves and all others similarly situated,

Plaintiffs,

v.

VOLKSWAGEN AG, VOLKSWAGEN OF AMERICA GROUP, INC., VOLKSWAGEN OF AMERICA, INC., AUDI OF AMERICA, LLC, and AUDI AG,

Defendants.

Case No. 1:15cv1295

JURY TRIAL DEMANDED

LOG/MSN

CLASS ACTION COMPLAINT

Plaintiffs Maria Bourn, David Watson, Steven Verner, and Mark Schumacher bring this action on their own behalf and on behalf of a class of similarly situated persons against Volkswagen AG ("VWAG"), Volkswagen of America Group, Inc. and Volkswagen of America, Inc. (collectively, "VWoA"), and Audi of America, LLC and Audi AG (collectively, "Audi").[1] Plaintiffs seek injunctive relief and to recover damages caused by Volkswagen's violations of Section 2 of the Sherman Antitrust Act (15 U.S.C. § 2), the Racketeer Influenced and Corrupt Organizations Act ("RICO") (18 U.S.C. § 1961 *et seq.*), the Magnuson-Moss Warranty Act (15 U.S.C. § 2301 *et seq.*), the common law of fraud and unjust enrichment. and the statutory laws of California and Virginia. Plaintiffs make the following allegations upon information and belief,

[1] Unless otherwise indicated herein, all of these defendants will be referred to collectively as "Volkswagen."

VW FOIA, EPA 06/20/2017 2017-FFP_031059

except as to those allegations pertaining to the named plaintiffs, which are made on personal knowledge.

I. NATURE OF THE ACTION.

1. Four years ago, Martin Winterkorn ("Winterkorn"), Volkswagen's former Chief Executive Officer ("CEO"), announced Volkswagen's goal to become the world's largest automaker. "By 2018," he told U.S. politicians gathered for the opening of a Volkswagen plant in Chattanooga, Tennessee, "we want to take our group to the very top of the global car industry."[2] With only a relatively small share of the gigantic United States market, Winterkorn's ambitious plan required a dramatic increase in sales in that market. And the way to increase sales here, Volkswagen decided, was to convince American consumers that its diesel-powered cars were a superior alternative, with better fuel efficiency, lower emissions, and uncompromised performance.

2. Between 2009 and September 18, 2015, Volkswagen aggressively marketed its so-called Clean Diesel Turbocharged Direct Injection ("TDI") light passenger vehicles in the United States, spending millions of dollars on print, television, internet and point-of-sale advertising aimed at convincing American consumers that its cars were environmentally-friendly, fuel-efficient, powerful, and reasonably priced. In order to increase its market share, Volkswagen's cars needed all those attributes to win over a skeptical American public. Compared with Europe, with its higher fuel costs, expensive cars and less stringent tailpipe emission standards, the United States market was a tough sell for diesel-powered passenger cars.

3. Until September 18, 2015, it looked as if Winterkorn's ambitious plan had succeeded. In July of 2015, Volkswagen surpassed Toyota Corporation ("Toyota") as the world's largest automaker, selling 5.04 million vehicles in the first six months of this year, compared to

[2] http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

VW FOIA, EPA 06/20/2017 2017-FFP_031060

Toyota's 5.02 million.[3]

4. As noted above, the United States was a key part of this global strategy. As reported in *Automotive News*:

> Back in 2007, the automaker vowed to crank up U.S. sales of its VW brand to 800,000 vehicles a year by 2018. It was a dizzying sum, requiring more than a tripling of its volume at that time. Many in the industry scoffed.
>
> But with steady precision, VW got the skeptics to take a second look. It launched a lower-priced, Mexico-made Jetta and built a plant in Chattanooga that began churning out a new Passat that better fit American tastes and budgets. VW sales doubled between 2009 and 2012, to nearly 440,000, lifting hopes that 800,000 was doable.[4]

By October 1, 2015, VWoA had reported sales of 264, 215 passenger vehicles in the United States through September 15, indicating that before the scandal that is the subject of this Complaint surfaced, it was expecting another excellent sales year.[5]

5. Unfortunately for American consumers, Volkswagen's success in capturing market share was based on a lie. On September 18, 2015, the United States Environmental Protection Agency ("EPA") and the California Air Resources Board ("CARB") both notified Volkswagen that it had violated federal and state laws and regulations by using a "defeat device"--software specifically intended to circumvent emission test procedures established by the EPA and by CARB. Those notices are attached as Exhibits 1 and 2 to this complaint.

6. Volkswagen's "defeat device" is a "sophisticated software algorithm"[6] that detects

---

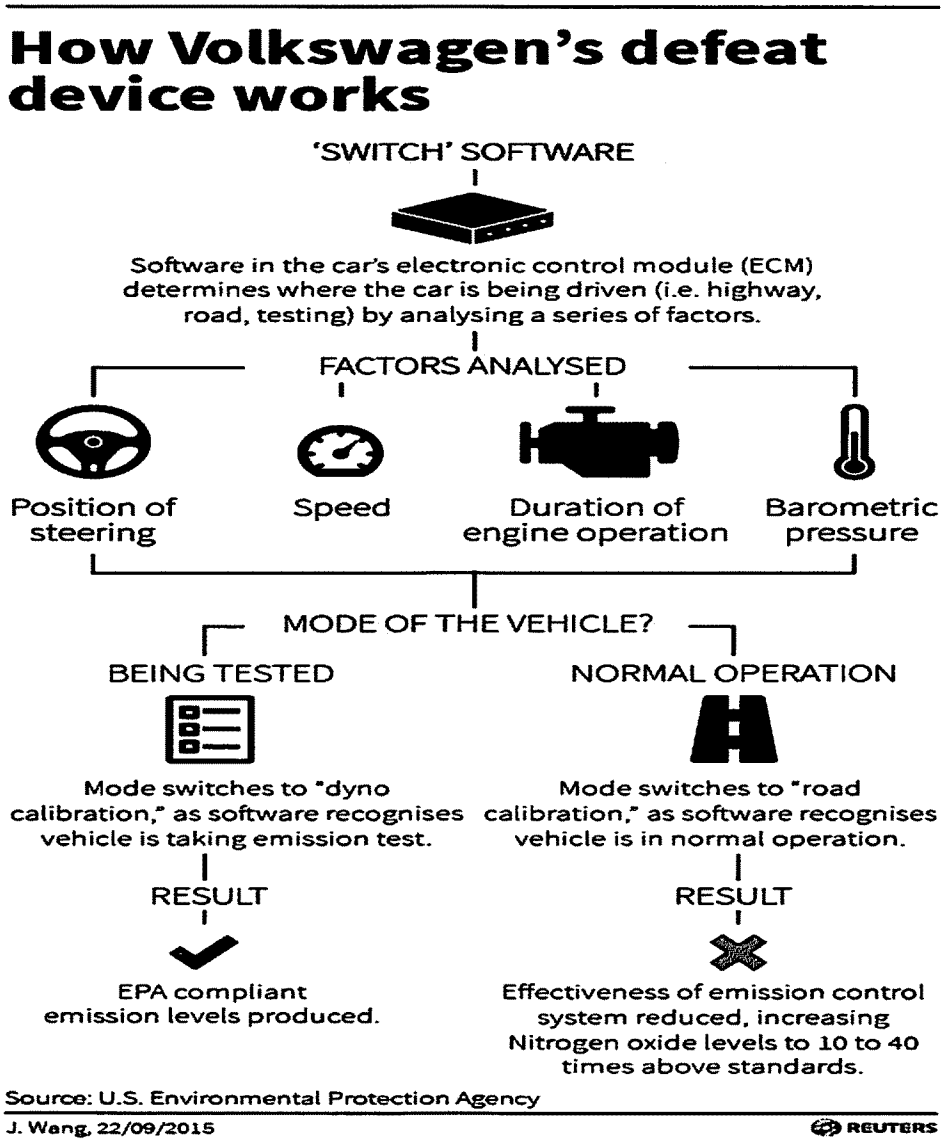
[4] http://www.autonews.com/article/20150126/RETAIL01/301269949/how-vw-veered--off-target.

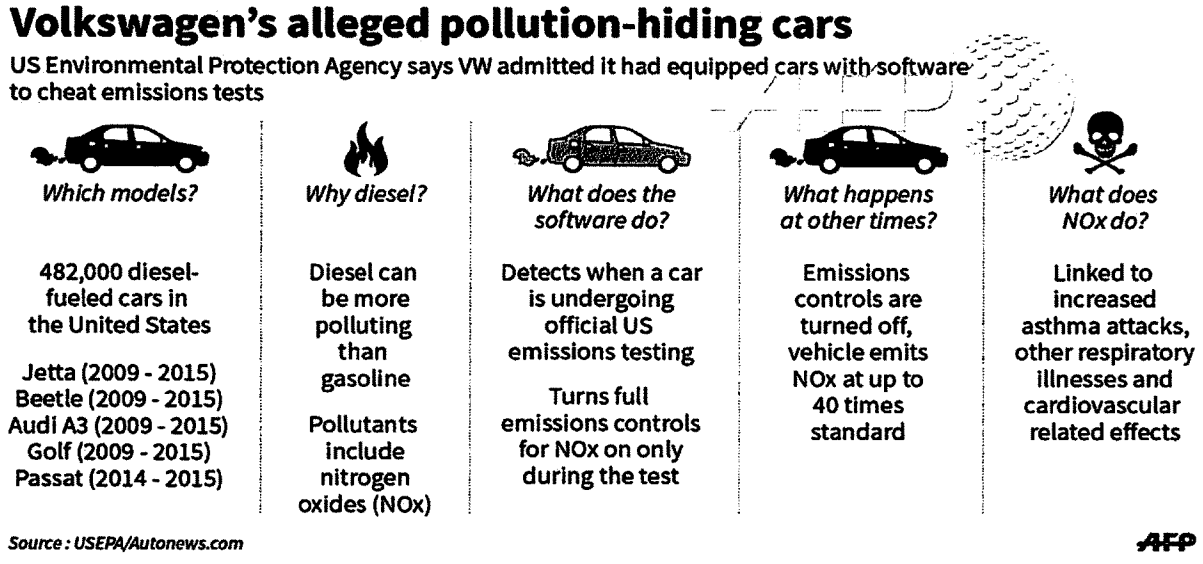
[5] http://media.vw.com/release/1080/.

[6] http://www.theguardian.com/business/2015/sep/18/epa-california-investigate-volkswagen-clean-air-violations.

when the car is undergoing emissions testing. Under such laboratory test conditions, Volkswagen's vehicles pass the EPA and CARB emissions tests with flying colors. Under normal driving situations, however, the software algorithm ***turns off*** the emissions control systems, allowing the cars to spew as much as 40 times the allowable amount of pollutants--specifically nitrogen oxides ("NOx")--into the air. Elevated NOx contributes to the creation of ozone and smog, and is linked to asthma attacks, other respiratory diseases such as emphysema and bronchitis, and causes premature death. A diagram published in Reuters depicts its operation:



7. The chart below, published by *Agence France Press*, provides a useful and concise primer on the known facts:



8. As noted below, dozens of fatalities in the United States over the last seven years have been attributed to the illegal use of this "defeat device." The scandal has been popularly referred to as "Dieselgate."

9. Volkswagen has admitted to installing these "defeat devices" in 11 million diesel vehicles that have been sold around the world, including the 482,000 in the United States. As Michael Horn ("Horn"), the President and CEO of VWoA, candidly admitted: "[l]et's be clear about this. **Our company was dishonest. With the EPA, and the California Air Resources Board, and with all of you. And in my German words, we have totally screwed up.**"[7] (Emphases added). Horn further stated in a video on VWAG's website that **"[o]ur company**

[7] http://www.roadandtrack.com/new-cars/car-technology/news/a26774/volkswagen-ceo-we-screwed-up/. A YouTube video of this extraordinary concession can be found here: www.youtube.com/watch?v=Q6z8uUJE-jE.

betrayed the trust of you, our customers, our employees, our dealers and the public."[8] (Emphases added). And as VWAG has posted on its website: "[g]overnment regulations limit the use of engine software that reduces the effectiveness of a vehicle's emissions control systems. **Those are the 'defeat device' regulations, and regrettably, VW violated those regulations. We take full responsibility** – and deeply regret that this happened."[9] (Emphases added). In a September 23, 2015 press release available on VWAG's website, the Executive Committee of VWAG's Supervisory Board ("Board") stated: "[t]he Executive Committee takes this matter extremely seriously. **The Executive Committee recognizes not only the economic damage caused, but also the loss of trust among many customers worldwide.**"[10] (Emphases added). Or, as Berthold Huber ("Huber"), Deputy Chairman of the Board, was quoted as saying in a September 25 press release, **"[t]he test manipulations are a moral and political disaster for Volkswagen. The unlawful behavior of engineers and technicians involved in engine development shocked Volkswagen just as much as it shocked the public."** [11] (Emphases added).

10. In light of the scandal, VWAG's Board forced Winterkorn to resign as CEO of VWAG on September 23.[12] In doing so, he stated that "**I accept responsibility for the irregularities that have been found in diesel engines.**" (Emphases added). [13] He further observed

[12] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html

[13] http://www.nytimes.com/2015/09/24/business/international/volkswagen-chief-martin-winterkorn-resigns-amid-emissions-scandal.html. Notably, however, Winterkorn plans to stay as the Chairman of the Board of Directors of Porsche Automobil Holding SE, which owns a 52% controlling stake in VWAG; he is also still demanding payment of the ten million Euros owed to him under his employment contract, which does not expire until 2016.

that "**[m]illions of people across the world trust our brands, our cars and our technologies. I am endlessly sorry that we have disappointed this trust. I apologize in every way to our customers, to authorities and the whole public for the wrongdoing.**"[14] (Emphases added). He professed surprise that "**misconduct on such a scale**" (emphases added) occurred within the Volkswagen group, suggesting that he had no knowledge of it.[15] It has been reported that Winterkorn was being investigated for fraud in connection with the conduct at issue here by prosecutors in Lower Saxony; however, more recently, those prosecutors have stated that any prosecution will await further factual information.[16]

11. Volkswagen has ordered its authorized dealers ("Volkswagen Authorized Dealers") to cease selling the vehicles in which the defeat devices are installed. These include at least the VW Jetta TDI (Model Years 2009-15), the VW Jetta SportWagen TDI (Model Years 2009-14), the VW Golf TDI (Model Years 2010-15), the VW Golf SportWagen TDI (Model Year 2015), the VW Beetle TDI and VW Beetle Convertible TDI (Model Years 2012-15), the VW Passat TDI (Model Years 2012-15) and the Audi A3 TDI (Model Years 2010-15).[17] These affected vehicles will be referred to in this Complaint as the "Class Vehicles."

12. Volkswagen's internal investigation has resulted so far in the suspension of three

VW FOIA, EPA 06/20/2017 2017-FFP_031065

executives: (a) Heinz-Jakob Neusser ("Neusser"); (b) Ulrich Hackenberg ("Hackenberg"); and (c) Wolfgang Hatz ("Hatz").[18] Spiegel Online described Hackenberg's departure, which was also typical of the others: "[h]e received news of his immediate suspension from the personnel department and was asked to turn in his company phone and leave his office. He has also been told not to set foot on company premises."[19]

13. None of these people are mere obscure midlevel engineers. Hackenberg is a VWAG Board member for Technical Development.[20] The same Spiegel Online article described Hackenberg as "a long-time confidant of Winterkorn and, up until just a few days ago, one of the most powerful men at VW." Hatz is a Porsche AG ("Porsche") Board of Management member in charge of Research and Development and is additionally Head of Engines and Transmissions Development for the Volkswagen Group.[21] Neusser was responsible for engine development at Porsche commencing in 1998 and drivetrain development commencing in 2011; in October of 2012, he succeeded Hatz as Head of Powertrain Development at the Volkswagen Group.[22]

14. The same Spiegel Online article notes that Hans-Dieter Pötsch ("Pötsch"), the VWAG Finance Chief and Board Chairman of VWAG, may also be under investigation by regulatory authorities. As discussed below, Volkswagen told the EPA about the use of a defeat device on September 3, but disclosed it publicly only on September 20. "[T]he finance chief

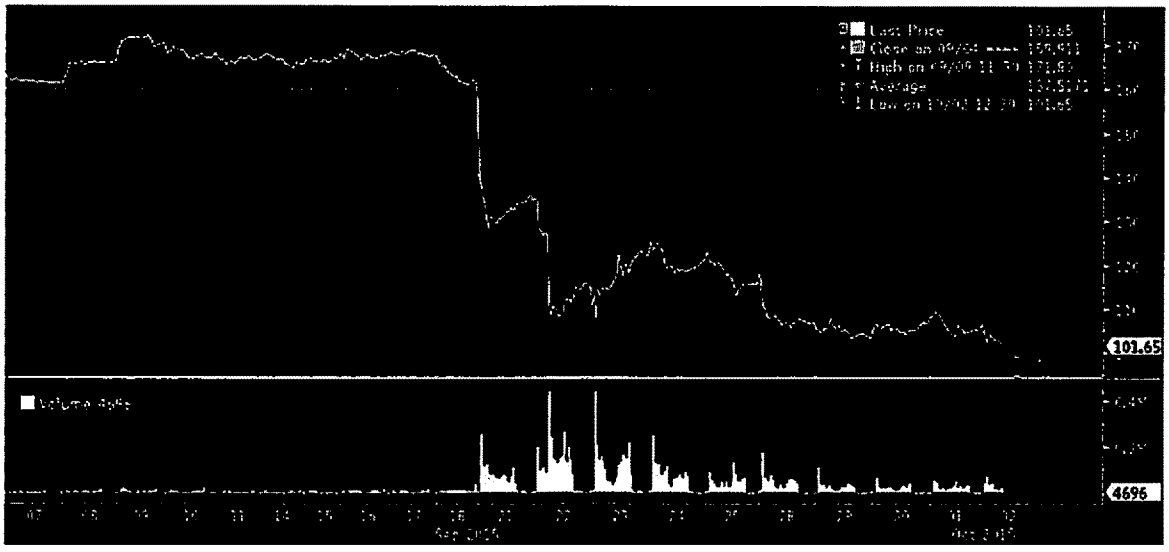
[20] http://www.audi.com/corporate/en/company/corporate-management/members-of-the-board/ulrich-hackenberg.html.

[21] http://press.porsche.com/more_about/executives/pag/hatz.php.

[22] http://www.volkswagenag.com/content/vwcorp/info_center/en/news/2012/09/Dr_Heinz_Jakob_Neusser.html.

remained silent for 17 days. During these 17 days, hundreds of thousands of investors bought VW stock. When the scandal was finally made public on Sept. 20, the price of VW shares plunged by 40 percent, costing stockholders €35 billion."[23] VWAG's shares have been on a steady decline ever since, as reflected in this graphic from the *Telegraph* in the United Kingdom:



15. According to an October 3 article from Reuters, "[a]t an internal company meeting this week at the VW headquarters in Wolfsburg, Pötsch described the situation as an 'existence-threatening crisis for the company', Germany's Welt am Sonntag reported in a release ahead of Sunday's publication."[24]

[23] http://www.spiegel.de/international/business/falsified-emissions-scandal-push-volkswagen-to-limits-a-1055897.html.

[24] http://mobile.reuters.com/article/idUSKCN0RX0GQ20151004. Pötsch's accession to the VWAG Board has been criticized. Hans-Christoph Hirt, a director of Hermes Equity Ownership Services, an adviser to pension fund investors in companies including Volkswagen, said the appointment created a "serious conflict of interest": "[Pötsch] was a key VW executive for more than a decade and under German law the management board has a collective responsibility . . . The lawyers will surely demand that he recuse himself from any supervisory board meetings when management's role is discussed."

16. As explained below, and contrary to the suggestions of some of Volkswagen's spokespersons, the unlawful conduct here was not the action of renegade lower-level employees. It was instead the product of a concerted scheme by top executives at Volkswagen to save costs through use of the TDI technology, break into the United States diesel passenger car market by concealing from regulators and the public the inability of cars using that technology to meet federal and state emissions standards, market the TDI cars through an elaborate seven-year long campaign of false advertising and lying to state and federal officials, and thereby obtain a monopoly share of the United States Clean Diesel passenger car market.

17. The German periodical *Bild am Sonntag* revealed that Robert Bosch GmbH ("Bosch"), the supplier of some components of the emissions control system, used by Volkswagen in TDI diesel vehicles, also supplied Volkswagen with diesel software for test purposes. Bosch reportedly told VWAG in 2007 that using that software in vehicles on the road would be illegal.[25] Similarly, *Süddeutsche Zeitung* has reported that Neusser had ignored least one Volkswagen engineer's warnings over "possibly illegal" practices in 2011.[26] Spiegel Online reported that groups within Volkswagen knew of potential issues as far back as 2005 or 2006.[27] Olaf Lies, a VWAG Board member, has stated publicly that **"[t]hose people who allowed this to happen, or who made the decision to install this software--they acted criminally. They must take personal responsibility**."[28] (Emphases added).

---

http://www.cnbc.com/2015/10/04/volkswagens-uniquely-awful-governance-at-fault-in-emissions-scandal.html.

[25] http://www.autonews.com/article/20150927/COPY01/309279989/bosch-warned-vw-about-illegal-software-use-in-diesel-cars-report-says.

[28] http://www.bbc.com/news/business-3439.7426.

18. As discussed in further detail below, Volkswagen has set aside the inadequate sum of 6.5 billion Euros (approximately $7.2 billion) to deal with the fallout from this fraud. Numerous countries across the world are investigating the matter and here, in the United States, probes are being conducted by the United States Department of Justice ("DOJ"), a coalition of state attorneys general ("AGs"), and members of the United States House of Representatives. The EPA has ordered a recall.

II. THE PARTIES.

A. Plaintiffs.

19. Plaintiffs Maria Bourn ("Bourn") and David Watson ("Watson") are residents of South San Francisco, California. Bourn is a lawyer in San Francisco. Watson is a teacher. In 2015, Bourn and Watson, who are married, purchased a certified, pre-owned 2010 Model Year Jetta SportsWagen from Stevens Creek Volkswagen in San Jose, California. Stevens Creek Volkswagen is a Volkswagen Authorized Dealer. Plaintiffs purchased the SportsWagen in reliance on Volkswagen's representations that the car was an environmentally-friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. They would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

20. Plaintiff Mark Schumacher ("Schumacher") resides in Gainesville, Virginia. In 2012, he purchased a 2012 Model Year Volkswagen Passat SE TDI. Schumacher purchased the Passat from Lindsay Volkswagen in Sterling, Virginia. That company is a Volkswagen Authorized Dealer.Plaintiff Schumacher purchased the Passat in reliance on Volkswagen's representations that the car was an environmentally-friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. He would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

21. Plaintiff Stephen Verner ("Verner") is an architect and resident of Oakland,

VW FOIA, EPA 06/20/2017 2017-FFP_031069

California. In 2013, he purchased a TDI Golf four door from Royal Motor Sales in San Francisco, California. Royal Motor Sales is an Authorized Volkswagen Dealer. Verner purchased the Golf in reliance on Volkswagen's representations that the car was an environmentally friendly "clean diesel" vehicle that was highly efficient, high-performance, and fun to drive. He would not have purchased the vehicle in the absence of Volkswagen's misrepresentations about the car's environmental impact, its fuel efficiency, and performance.

B. Defendants.

22. Defendant VWAG is a car corporation organized and existing under German law, with its principal place of business in Wolfsburg, Germany. VWAG is the parent company of Defendants VWoA and Audi.

23. Defendant Audi AG is a car corporation organized and existing under German law, with its principal place of business in Ingolstadt, Germany. Audi was created when VWAG merged two of its companies, Auto Union and NSU Motorenwerke AG. Audi is a 99.55%-owned subsidiary of the Volkswagen Group. Audi is now Volkswagen's luxury vehicle brand, and uses the slogan "Truth in Engineering".

24. Defendant the Volkswagen Group of America, Inc. is a corporation organized and existing under New Jersey law. Its headquarters are in Herndon, Virginia. The Volkswagen Group of America, Inc. is a wholly-owned subsidiary of VWAG. It is one of the world's largest producers of passenger cars. It sells the Beetle, Beetle Convertible, CC, Eos, e-Golf, Golf, Golf GTI, Golf SportWagen, Jetta, Passat, Tiguan, and Touareg vehicles through Volkswagen Authorized Dealers located in the United States. Volkswagen Group of America, Inc.'s operations in the United States include research and development; parts and vehicle processing; parts distribution; sales, marketing and service offices; financial service centers; and manufacturing.

25. Defendant Volkswagen of America, Inc. is owned and operated by the Volkswagen Group of America, Inc. and sells Volkswagen vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

26. Defendant Audi of America, LLC is a subsidiary of Audi AG that sells Audi vehicles in the United States. Its United States headquarters are at the same address as Volkswagen Group of America, Inc. in Herndon, Virginia.

III. JURISDICTION AND VENUE.

27. This Court has jurisdiction over this action pursuant to 28 U.S.C. §§ 1331, 1332(d), 1337(a) and 1367. This court also has supplemental jurisdiction pursuant to 28 U.S.C. §1367(a).

28. Venue is proper in this judicial district and in the Alexandria Division thereof pursuant to 15 U.S.C. §§ 15 and 22, and 28 U.S.C. § 1391(b) and (c), in that at least one of the Defendants resides in this judicial district, is licensed to do business or is doing business in this judicial district.

IV. TRADE AND COMMERCE.

29. Approximately 482,000 Class Vehicles have been sold or leased in the United States in a continuous and uninterrupted flow of interstate commerce and foreign commerce during the last seven years, including through and into this judicial district. The business activities of the Defendants substantially affected interstate trade and commerce in the United States and caused antitrust injury in the United States.

V. FACTUAL ALLEGATIONS.

A. Automobile Emissions Regulations in the United States.

30. Congress enacted the first major Clean Air Act ("CAA") and established the EPA in 1970. The CAA, amended in 1975 and 1990, requires vehicle manufacturers to certify to the EPA that their cars and trucks will meet applicable federal emission standards.[29] The EPA administers a certification program to ensure that every vehicle complies with its emission standards. EPA-issued certificates of conformity are required for every vehicle sold in the United States, and the EPA must approve every vehicle entering United States commerce. In these

[29] http://www2.epa.gov/laws-regulations/summary-clean-air-act.

VW FOIA, EPA 06/20/2017 2017-FFP_031071

certification efforts, the EPA relies on test data submitted by automobile manufacturers, which submit the vehicles to the agency's testing procedures in their own laboratories. The EPA audits a small fraction of the new vehicles each year to ensure compliance.[30]

31. The Class Vehicles, like any other car sold in the United States, were required to satisfy emission standards for certain air pollutants, including NOx. 40 C.F.R. §86.1811-4; Clean Air Act §101(b)(1) – (2), 42 U.S.C. §7401(b)(1)(2).

32. Section 203(a)(3)(b) of the CAA prohibits the manufacture, selling, or installation of any device that bypasses, defeats or renders inoperative a required element of a vehicle's emissions control system. 42 U.S.C. §7522(a)(3)(b). Section 203(a)(10 of the same statute also prohibits the sale of motor vehicles or engines that are not covered by valid certificates of conformity with applicable emissions standards. 42 U.S.C. §7522(a)(1). The regulatory requirements for defeat devices are set forth in 40 C.F.R. Part 86.

33. The EPA has been rigorous in punishing automobile manufacturers or engine makers that utilize defeat devices. For example, in late 1995, it entered into a $45 million dollar settlement with General Motors Corporation regarding the use of defeat devices on 470,000 Cadillac cars.[31] Likewise, in August of 1998, it fined Honda $267 million and Ford $7.8 million for selling vehicles equipped with defeat devices that prevented emission control systems from working properly.[32] Similarly, in October of that year, it and the DOJ fined seven truck and heavy duty equipment manufacturers $83.4 million for engaging in similar conduct.[33]

---

[30] http://www.autonews.com/article/20151004/OEM11/310059955/vw-emissions-violations-put-self-certification-under-new-scrutiny.

[31] http://www.autosafety.org/sites/default/files/imce_staff_uploads/Cadillac%20%2445%20Million%20Defeat%20Device%20Penalty%2011-31-95.pdf.

[33] http://www2.epa.gov/enforcement/cummins-engine-company-diesel-engine-clean-air-act-settlement.

VW FOIA, EPA 06/20/2017 2017-FFP_031072

34. Volkswagen was or should have been aware of these precedents. Indeed, the company itself is a recidivist violator of the CAA. In July of 1973, the EPA referred to DOJ for legal action a claim that defeat devices were installed on 1973 Volkswagens. A copy of that referral is attached as Exhibit 3 to this complaint. The matter was settled for $120,000 in March of 1974.[34] Similarly, in June of 2005, Volkswagen entered into a consent decree with DOJ whereby it paid a $1.1 million penalty concerning its failure to notify the EPA of emissions defects in certain vehicles manufactured at its facility in Mexico.[35] A copy of that decree is attached as Exhibit 4 to this Complaint.

35. CARB is a department of the California Environmental Protection Agency. It was created in 1967. California is the only state permitted to have such a regulatory agency, because it was created prior to the enactment of the CAA. CARB's mission is to "[t]o promote and protect public health, welfare and ecological resources through the effective and efficient reduction of air pollutants while recognizing and considering the effects on the economy of the state."[36]

36. The EPA introduced phased in Tier 2 emissions standards from 2004 to 2009. California has similar standards in its CA LEV II standard. The Tier 2 Bin rating system applied to all passenger vehicles regardless of fuel type. Tier 2 Bin 5 standards--the ones applicable to the Class Vehicles--imposed an emission rate for NOx of 0.07 grams per mile.[37]

37. New cars that are sold bear stickers indicating that they are EPA-and/or CARB compliant. Here is a photograph of such a sticker on the inside of the hood of a TDI Audi A3, one of the Class Vehicles.

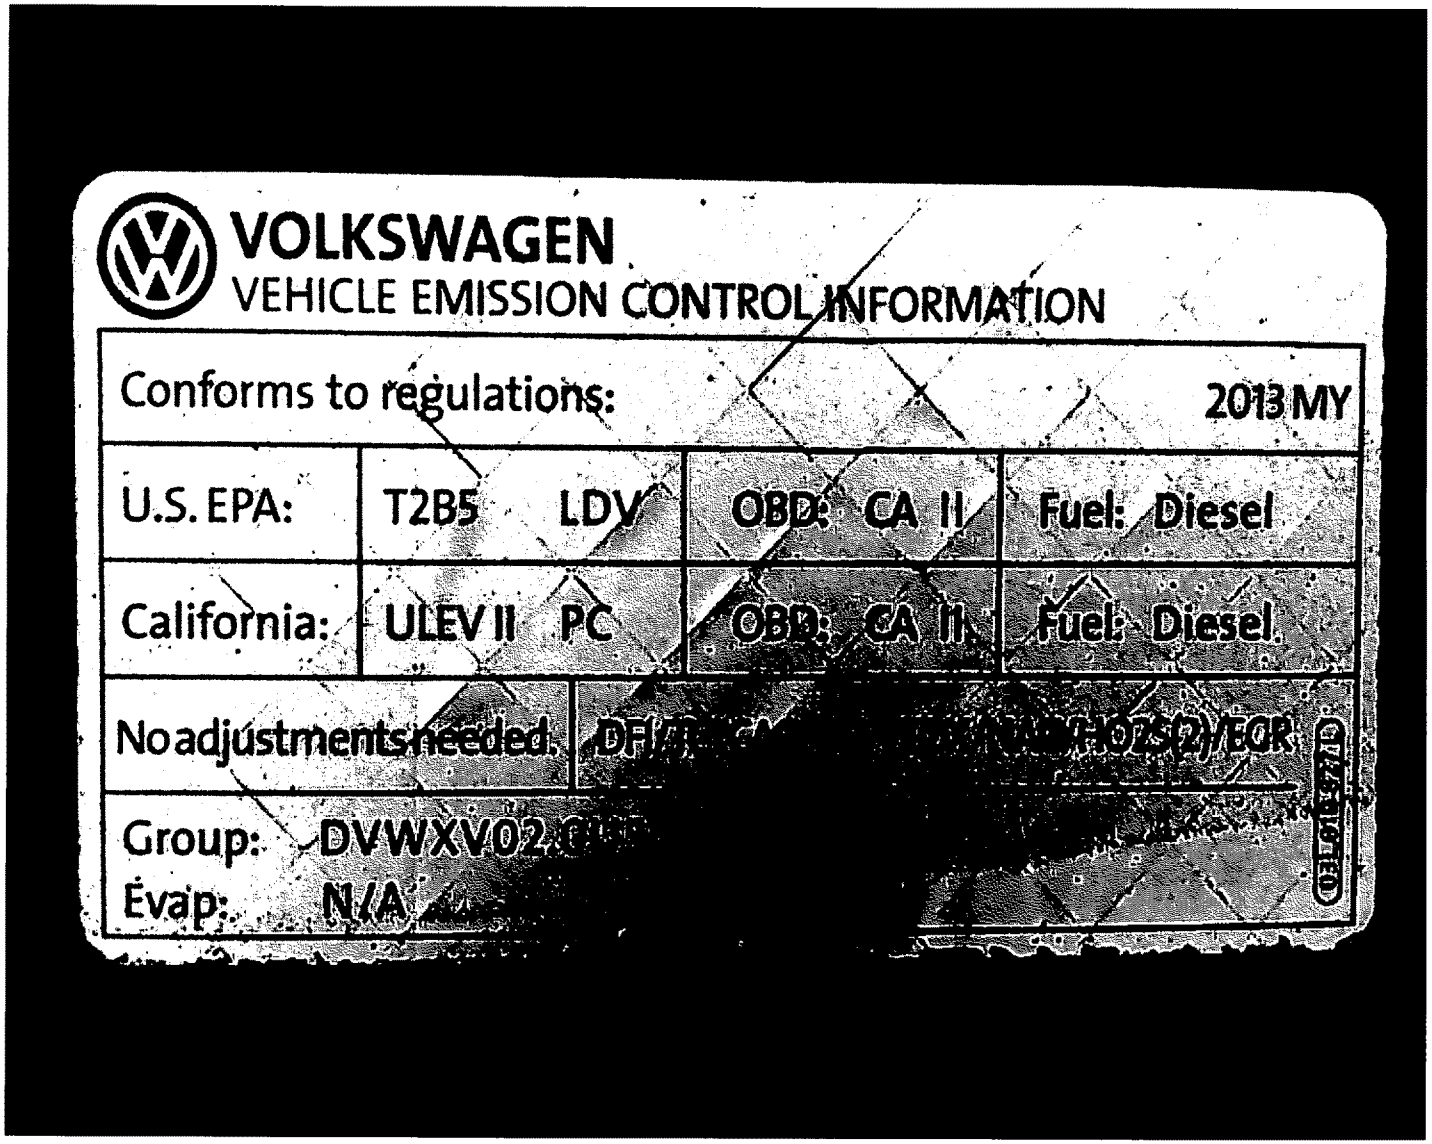
And here is a similar sticker for a 2013 TDI Volkswagen Golf:

//

//

//



VOLKSWAGEN
VEHICLE EMISSION CONTROL INFORMATION

Conforms to regulations:			2013 MY
U.S. EPA:	T2B5 LDV	OBD: CA II	Fuel: Diesel
California:	ULEV II PC	OBD: CA II	Fuel: Diesel
No adjustments needed.	DFI/TC/CAC/DOC/CPF/SCR/EGR		
Group: DVWXV02.0U4			
Evap: N/A			

Through these types of notice, Volkswagen was representing to customers that the Class Vehicles complied with federal and state emissions laws. This was an outright lie.

B. Diesel Cars And Control of NOx Emissions.

38. Diesel-powered cars, like gasoline-powered cars, must also meet the emissions standards established by the EPA and CARB. With diesel-powered engines, car manufacturers must use different--and more expensive--emission control systems than are used in gasoline-powered cars.

39. Diesel fuel has a greater energy density than gasoline. It converts heat into energy more efficiently than gasoline, sending less heat out of the tailpipe than gas-powered vehicles. Because it has greater energy density, diesel also is more efficient: diesel vehicles can get up to 30% more miles per gallon than similar gasoline-powered cars. In addition, because of their higher compression, diesel engines can generate a lot of torque, providing strong acceleration and additional power needed for towing.

40. While diesel vehicles have certain advantages over gasoline, they also have some disadvantages. Because diesel fuel is heavier and oilier than gasoline, it can generate more pollution. While diesel engines emit lower amounts of carbon monoxide than gasoline-powered engines, they emit more NOx.

41. Diesel fuel exhaust has been recognized by the World Health Organization to be a carcinogen for humans.[38]

42. Automakers have faced significant challenges in controlling NOx emissions sufficiently to meet environmental standards, particularly with smaller vehicles, and particularly in the United States, which has some of the strictest emission controls in the world. The website of greencongress.com explains the two types of approaches diesel automobile manufacturers have used to deal with NOx emissions:

[38] http://www.iarc.fr/en/media-centre/pr/2012/pdfs/pr213_E.pdf.

VW FOIA, EPA 06/20/2017 2017-FFP_031076

> Broadly, there have been two catalytic approaches used to reduce exhaust NO_x: urea-based selective catalytic reduction (SCR) and lean NO_x trap (LNT) catalysts.
>
> --The urea-SCR (urea=AdBlue) approach requires on-board storage of the reductant fluid which is introduced into the exhaust upstream of the SCR catalyst. It is then converted to ammonia which interacts with NO_x on the SCR catalyst to form water and nitrogen.
>
> --LNT technology utilizes fuel from the vehicle and advanced engine controls to enable periodic operation of the engine at rich air-to-fuel ratios to produce oxygen-depleted exhaust suitable for reducing NO_x stored on the LNT catalyst surface.[39]

43. The article indicates that Volkswagen had planned to use both technologies as of 2007, but elected to go with the LNT approach (which it referred to as TDI). As explained below, the deciding factor was apparently cost. Because of the extra equipment (including a urea tank) and technology required to clean the NOx emissions from the diesel exhaust, SCRs can add significantly to the cost of producing the engine. They also make diesel cars heavier than they otherwise would be, thus potentially decreasing fuel efficiency, torque and power.

44. Honda, which sells diesel cars in markets other than the United States, never tried to sell them here. That is because, according to Honda's research, "[t]he market would not bear the costs of doing diesel correctly." In order to meet the stringent United States emissions standards, Honda would have had to add costly emissions controls to every diesel model, which would make them more expensive than gasoline-powered competitors. "At such a high premium, customers simply wouldn't buy them."[40]

C. Volkswagen's Decision To Use TDI Technology.

45. Volkswagen has been selling cars in the United States since 1949, when it introduced the iconic Volkswagen Beetle. Although it was for many years the top-selling imported car in the United States, Japanese imports overtook Volkswagen and other European imports in

---

[39] http://www.greencarcongress.com/2015/09/20150921-vw2l.html.

[40] http://mashable.com/2015/09/27/vw-dieselgate/#2VosDbcL7iqT.

the 1990s.

46. The decisive factor in the decision to use TDI technology in 2007-08 was the appointment of Winterkorn as CEO of VWAG in January of 2007. Winterkorn was involved in overseeing research and development and had that responsibility at the time he resigned as CEO. In 1995, he took over as the head of Volkswagen Group Product management and a year later, he assumed the role of Member of the Board of Management for "Technical Development" at the Volkswagen brand. He assumed a similar role when he became Chairman of the Board of Management at Audi.[41]

47. Before Winterkorn took over as VWAG's CEO on January in 2007, Volkswagen had partnered with Bosch and Daimler to explore the use of a diesel emissions control system called BlueTec.[42] BlueTec was a technology developed by the latter two companies and championed by Wolfgang Bernhard ("Bernhard"), former head of the Volkswagen brand and a former Daimler executive. BlueTec was an SCR technology; it required the use of a liquid urea tank, so that urea could be sprayed onto the emissions in order to neutralize the NOx. The urea tank not only takes up space and adds weight (disadvantages that are especially acute in the market for small, fuel-efficient cars), but also requires the owner to refill the tank, making the diesel engine more inconvenient than a traditional gasoline-powered car. When Bernhard left the company after Winterkorn took control, the BlueTec technology was scrapped for smaller vehicles. Volkswagen only began using a form of SCR technology on a few of its smaller vehicles in 2012.

48. *Automotive News* describes the sequence of events:

> *Bild am Sonntag* said the roots of the crisis were planted in 2005 when then-VW brand Chief Wolfgang Bernhard wanted VW to

---

[41] *See* http://www.volkswagenag.com/content/vwcorp/content/en/the_group/senior_management/winterkorn.html.

[42] For the source of this information, *see* http://www.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?_r=0.

VW FOIA, EPA 06/20/2017 2017-FFP_031078

> develop a new diesel engine for the U.S. market. Bernhard recruited Audi engineer Rudolf Krebs who developed a prototype that performed well in tests in South Africa in 2006, the paper said.
>
> Bernhard and Krebs argued that the only way to make the engine meet U.S. emission standards was to employ in the engine system an AdBlue urea solution used on larger diesel models such as the Passat and Touareg, according to the report.
>
> This would have added a cost of 300 euros ($335 in today's U.S. dollars) per vehicle -- a sum that VW finance officials said was too much at a time when a companywide cost-cutting exercise was under way.
>
> Bernhard left VW in January 2007 before the diesel engine went into production. Krebs was moved to another role when Martin Winterkorn became VW Group and brand CEO in 2007.
>
> Winterkorn, Audi's former CEO, asked Audi development boss Ulrich Hackenberg and Audi engine boss Wolfgang Hatz to move to VW's Wolfsburg headquarters and continue development work on the engine, *Bild am Sonntag* said.
>
> The engine then ended up in VW Group diesels with its engine software manipulated to fool diesel emissions tests in the U.S.[43]

Hatz and Hackenberg, as noted above, were two of the executives whom VWAG recently suspended.

49. Engineers at Volkswagen had been looking at an alternative to BlueTec technology, an alternative that ultimately evolved into the TDI "Common Rail" system. In 2006, Richard Dorenkamp, head of Volkswagen's diesel engine development, gave a presentation in Detroit. He described the TDI system Volkswagen engineers developed and how it could be used in small cars and meet increasing US demands for fewer emissions.[44] Volkswagen's TDI Clean Diesel pollution

---

[43] http://www.autonews.com/article/20150927/COPY01/309279989/bosch-warned-vw-about-illegal-software-use-in-diesel-cars-report-says. Winterkorn was generally very concerned about the costs associated with developing eco-friendly automotive engines. As he said at the 2014 Paris auto show, "[c]limate protection is not available free of charge. Every gram of reduction in [tailpipe] C02 costs us 100 million euros. Every gram!" http://blog.caranddriver.com/vws-winterkorn-to-greens-so-get-off-our-backs-already/.

[44] http://www1.eere.energy.gov/vehiclesandfuels/pdfs/deer_2006/session7/2006_deer_dorenkamp.pdf.

control technology differed from the SCR technology used by other manufacturers to control NOx emissions. The greencarcongress.com article cited earlier describes it in detail. Instead of having a urea tank, the TDI Clean Diesel cars technology used a trap to collect NOx. While saving the space, weight and cost required by the urea tank in the SCRs, Volkswagen's TDI Clean Diesel technology--when it was operational--required additional use of fuel, thus degrading both gas mileage and performance. The trap was controlled by a computer module that could save fuel by allowing more pollutants to pass through the exhaust system.

50. In June of 2007, six months after Winterkorn took over as CEO of VWAG, Volkswagen issued a report entitled "Power Train and Fuel Strategy--The Path To The Future."[45] It stated:

> In the first stage on the path to this independence, it will be important to utilize existing fossil fuels as efficiently as technically possible. Volkswagen is putting its stamp on this phase with vehicles such as the BlueMotion models, a universally fuel-efficient fleet of TDI engines, highly efficient and unique TSI engines, successful natural gas vehicles (EcoFuel) and a lineup of models that still leaves room for automotive dreams. Very soon these fundamental technologies will be further refined. **New powertrains, including an engine concept developed for use in the USA, under the working title "BlueTDI", are already in the prototype stage. These engines will fulfill the toughest emissions laws in the world – even the so-called "Tier2 Bin5" in California, one of the most stringent emissions standards in the world.** (Emphases added).[46]

51. Volkswagen had planned to introduce the Jetta TDI Clean Diesel in the United States earlier than it eventually did. In November of 2007, it was reported as follows:

---

[45] It can be found at http://www.volkswagenag.com/content/vwcorp/info_center/en/themes/2007/06/powertrain_and_fuel_strategy.html.

[46] In 2008, five VWAG engineers published a two-part article in the May and June issues of *MTZ* magazine saying they had resolved the issue of how to best control emissions and could now meet California standards through the use in part of a new on-board diagnostics system. Similarly, Achim Freitag, a testing engineer in Volkswagen's diesel development department, touted the new engine in a speech given later that year. *See* http://www.pbs.org/wgbh/nova/next/tech/volkswagen-diesel-emissions/.

VW FOIA, EPA 06/20/2017 2017-FFP_031080

> A problem with the emissions system in Volkswagen's new Jetta TDI will delay the launch of the diesel sedan for about six months. The car is critical to VW's plans to get back on track in the United States.
>
> VW spokesman Keith Price confirmed that the delay will be announced this week at the Los Angeles auto show. Price would not give specifics about the technical problem, but he said it has been fixed.
>
> The technical changes engineers made to solve the problem mean the car must go through emissions testing and validation again, Price said.
>
> VW dealers have been without a new diesel car to sell since last spring. Production of the new model, which will be sold in all 50 states, was scheduled to start in January. The car will be built in Puebla, Mexico.
>
> U.S. sales originally were expected to begin in early spring, Price said. Now sales won't start until later in the summer."
>
> "Sure, they're disappointed," Price said of dealers who have learned of the delay.
>
> Price said there is a lot of pent-up demand from loyal VW diesel buyers for the next- generation Jetta, which has a new engine built in Germany and a new diesel fuel injection system.
>
> "They're disappointed, but they see the point that this car has to be perfect," Price said of the dealers, adding, "They recognize the importance of this not only for their stores, but for the VW brand."
>
> A fleet of about 40 Jetta TDIs is undergoing testing as part of the validation procedure.[47]

52. What apparently happened is that the TDI technology failed initially to withstand United States emissions testing. The decision was made to delay the launch of the vehicle and activate the algorithm that functioned as a defeat device in the software management system. This is consistent with the timing of the letter from Bosch described above that raised the illegality of such a tactic. It is also consistent with recent revelations that appeared in the October 4 issue of *Bild am Sonntag*:

---

[47] http://www.cleanmpg.com/forums/showthread.php?t=7254.

> An internal review at Volkswagen AG shows the decision to install software that reduces diesel emissions in testing was made just before serial production of the company's EA 189 engine [used in many of the Class Vehicles], German tabloid Bild am Sonntag said.
>
> Bild said the software was first installed in its diesel engines in 2008, shortly before the EA 189 was mass produced. The move was taken because there was no way at the time to reconcile meeting emission standards within the targeted cost of the engine, the tabloid said in an advance release of the article to be published Sunday. Otherwise the company would have had to abandon the introduction of the engine, development of which was begun in 2005, the newspaper said.[48]

53. The 2009 Model Year TDI Jetta was introduced and passed the Tier 2 Bin 5 emissions test with flying colors. A Reuters article describes its successful launch:

> Volkswagen had heavily marketed what it called "clean diesel" engines starting in 2008 with the 2009-model Jetta TDI. It appeared to have found a sweet spot between high-performance and fuel-efficiency with a zippy, fun-to-drive car that topped 40 miles per gallon in highway driving. Named "Green Car of the Year" at the Los Angeles auto show in 2008, the Jetta TDI was seen as a breakthrough in a country where diesel passenger cars occupy a tiny niche compared with Europe, where they are about half of the market.
>
> "It's not your grandfather's diesel," Krause said in a September 2008 presentation to U.S. regulators, according to a video of the remarks.
>
> [Norbert] Krause [head of VWoA's environmental office until 2009] and other VW officials promised a diesel that would meet pollution laws in all states, including California where diesel engines had long been associated with smog and cancer-causing soot.
>
> By that point, VW and other automakers had lobbied for almost a decade for regulators to give diesel another chance. In 2000, VW and other companies with an interest in promoting diesel, including Mazda, formed the Diesel Technology Forum to lobby for increased use in the United States as a way to reduce reliance on imported oil. In 2005, an energy bill signed by President George W. Bush offered tax credits for diesel buyers. That gave the first wave of diesel Jetta buyers an income tax credit of $1,300 each.

[48] http://www.marketwatch.com/story/vw-began-using-emissions-software-in-2008-report-2015-10-04.

> In 2009, after the new Jetta went on sale, VW dealers initially sold out, including in California where regulations had effectively shut the market to diesels earlier in the decade.[49]

54. As noted in the article, *Green Car Journal* gave it the 2009 Green Car of the Year award and gave the TDI Audi A3 the 2010 Green Car of the Year Award.[50] Those awards have been rescinded in light of the present scandal.[51] The TDI Clean Diesels were a resounding success and VWoA sold many units.[52] As recently as its 2014 sustainability report, VWAG crowed about how "[t]he Volkswagen Group has a long tradition of resolute commitment to environmental protection" and how it intended to "put our creative powers to good use for the benefit of the people and the environment."[53]

55. At conferences and in published papers, Volkswagen extolled the efficiency and low emissions of its Clean Diesel technology.[54] And commentators agreed. One stated that Volkswagen was "the only company to have mastered the new emissions regulations using a compact, inexpensive treatment system. It allowed them to roll out diesel engines in one small car after another at relatively low prices."[55] Volkswagen's competitors had long wondered how Volkswagen could produce a clean diesel engine at such an affordable price. As Robert Lutz,

former vice chairman of General Motors Corporation, recounted: "I kept asking our engineers: 'What's wrong with you guys? VW seems able to do it.' I said, 'Are they magicians or something?' The engineers said they couldn't answer that question."[56] Now, they have their answer. Volkswagen cheated.

56. The competitive advantages of cheating on emissions have now become clear. "Manipulating emissions results allowed Volkswagen to keep down engine costs in a 'clean diesel' strategy that was popular in Europe and at the heart of a drive to improve U.S. results."[57] As an article in the *New York Times* put it, "[d]isabling the emissions controls brought major advantages, including much better mileage--a big selling point in Volkswagen's push to dominate in America."[58] These sales were part of the reason VWAG was able to surpass Toyota as the world's biggest automaker in 2015, as noted above. And they were sales built upon lies.

57. This systemic attitude of winning at all costs in spite of noncompliance with national environmental regulations is part of the corporate culture of Volkswagen, as explained at length in a September 24, 2015 *New York Times* article:[59]

> There is a long tradition of scandal and skulduggery in the auto industry, but few schemes appear as premeditated as Volkswagen's brazen move to use sophisticated software to circumvent United States emissions standards.
>
> That such a thing could happen at Volkswagen, Germany's largest company and the world's largest automaker by sales — 202.5 billion euros last year — has mystified consumers and regulators around the world. But given Volkswagen's history, culture and

[59] http://www.nytimes.com/2015/09/25/business/international/problems-at-volkswagen-start-in-the-boardroom.html?_r=1.

corporate structure, the real mystery may be why something like this didn't happen sooner.

"The governance of Volkswagen was a breeding ground for scandal," said Charles M. Elson, professor of finance and director of the John L. Weinberg Center for Corporate Governance at the University of Delaware. "It was an accident waiting to happen." The company, founded by the Nazis before World War II, is governed through an unusual hybrid of family control, government ownership and labor influence. Even by German standards, "Volkswagen stands apart," said Markus Roth, a professor at Philipps-University Marburg and an expert in European corporate governance. "It's been a soap opera ever since it started."

****

I spoke this week to a longtime former senior Volkswagen executive, who agreed that a scandal, especially one involving emissions, was all but inevitable at Volkswagen. He cited the company's isolation, its clannish board and a deep-rooted hostility to environmental regulations among its engineers.

The former executive, who spoke on the condition of anonymity because he now works at a competing global automaker, said that Wolfsburg, where Volkswagen is based in Lower Saxony and the city with the highest per capita income in Germany, is even more remote and isolated than Detroit was in its heyday. "The entire economy is automotive," he said. "People have a completely uncritical view of cars and their impact on the environment because they all make a living from the industry."

****

The Volkswagen board has been especially slow to move on environmental issues, investing less in electric and hybrid engine technology than industry leaders.

"There's an attitude among the German public that it's very unfair for the U.S. to target the auto industry over emissions," Professor Roth said. "If you have electric cars and a coal-fired plant producing the electricity, you gain nothing."

The former Volkswagen executive said Volkswagen's engineer-driven culture takes the notion even further. He said the engineers felt that the politicians were guilty of rank hypocrisy, especially in the United States, also grumbling that electric cars make no sense as long as power plants are burning fossil fuels.

"There's an attitude of moral superiority there," he said. "The engineers think they know best."

That Volkswagen is nonetheless obliged to obey applicable

> environmental laws, he said, is a notion likely to fall on deaf ears in Wolfsburg, especially compared to demands to be No. 1 in sales. (The motive for the software evasion is widely believed to have been to increase sales of diesel-powered cars in the United States.)

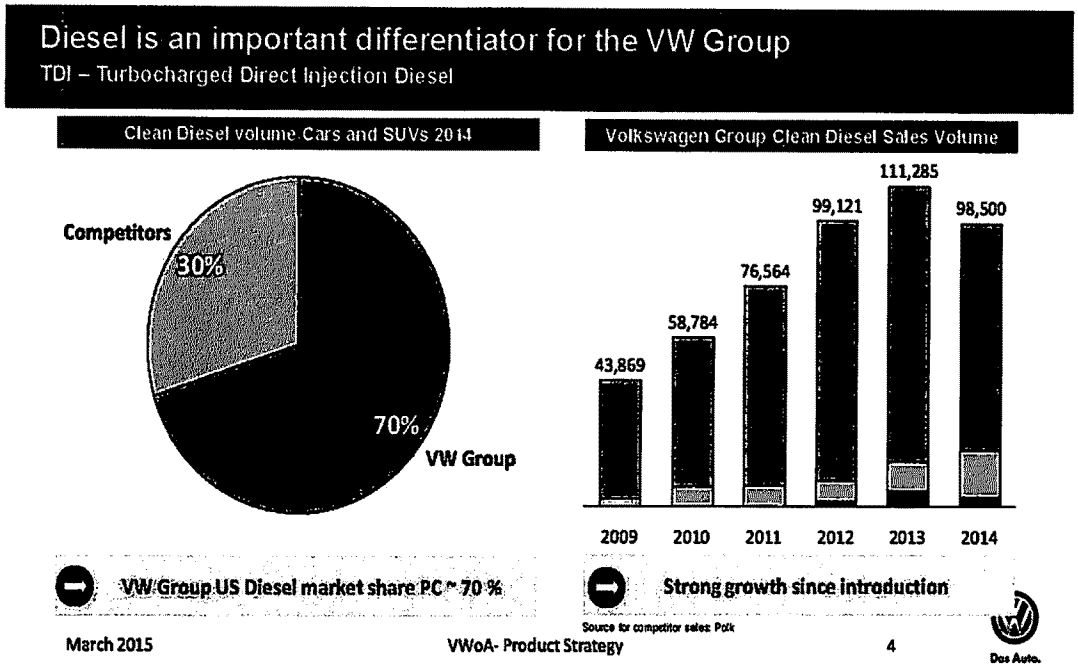
Thus, executives and engineers at Volkswagen were clearly unhappy with United States automotive emissions standards and were all too willing to sacrifice those standards (and their obligations under United States antitrust laws) in order to ensure that their company became the number one automaker in the world. The current scandal involving Volkswagen Clean Diesel TDI vehicles is a direct result of that arrogant intention to flout United States environmental laws. It is also a direct result of what has been described by one German executive as Volkswagen's "uniquely awful" corporate governance.[60]

D. The Clean Diesel Car Market.

58. Volkswagen's illegal conduct in this country occurred in the Clean Diesel passenger car market in the United States (the "Clean Diesel Car Market"), which can be viewed as a market of its own or as a submarket of passenger cars sold in this country. This fact was confirmed in a presentation by Douglas Skorupski ("Skorupski"), Manager of Power Train Strategy for VWoA, given to the Diesel Technology Forum ("DTF") in March of 2015:

[60] http://www.cnbc.com/2015/10/04/volkswagens-uniquely-awful-governance-at-fault-in-emissions-scandal.html.

VW FOIA, EPA 06/20/2017 2017-FFP_031086



59. Thus, VWoA clearly views clean diesel cars as a distinct market and Volkswagen's TDI technology as a factor that allowed it to obtain a monopoly share of that market.[61] It distinguished Clean Diesel cars from gasoline/electric hybrid cars based on superior performance:

[61] The presentation can be found at http://cleandieseldelivers.com/media/Douglas-Skorupski-VWoA_DTF_March2015.pdf. Bosch has similarly identified a distinct Clean Diesel car category: http://www.low-carbonfuels.com/pdfs/acte2011presentations/Day1/Breakout1/LightDuty/ACT2011-Breakout1-FreitagAlexPresentation150.pdf. And the EPA has noted that "Clean diesel" refers to a three-part emissions control system that combines cleaner diesel fuel, advanced engines and effective emissions control technology.

"[o]ne way Volkswagen aimed to achieve its lofty goal was by betting on diesel-powered cars — instead of hybrid-electric vehicles like the Toyota Prius--promising high mileage and low emissions without sacrificing performance."[62] Similarly, a survey conducted by Strategic Vision for Volkswagen found that customers of diesel and hybrid vehicles are very different and there is "very little crossover from one to the other." [63] The same article noted that Clean Diesel TDI and hybrid buyers differed demographically; the latter were "were just 51 percent male, 78 percent of them were married, 89 percent had no kids in the household, and their average age was 61", while the former "included far more men than women[,] [f]ewer of them were married, but more of them had children in the house, and they were fully 17 years younger, with an average age of 44." Likewise, a Volkswagen Clean Diesel IQ survey found that diesel car customers are highly aware of the benefits of clean diesel technology in contrast to hybrid and gasoline car customers. Furthermore, 94% of diesel customers will purchase clean diesel cars again while only 26% of hybrid and gasoline car customers will consider clean diesel cars for their next purchase.[64] All of this indicates little cross-elasticity of demand between hybrid vehicles and Clean Diesel vehicles.

60. Indeed, the major European competitors of Volkswagen in the Clean Diesel Car Market belong, along with Volkswagen, to an organization that is devoted to extolling the benefits of Clean Diesel cars.[65]

61. BloombergBusiness noted that consumers are willing to pay a substantial premium

---

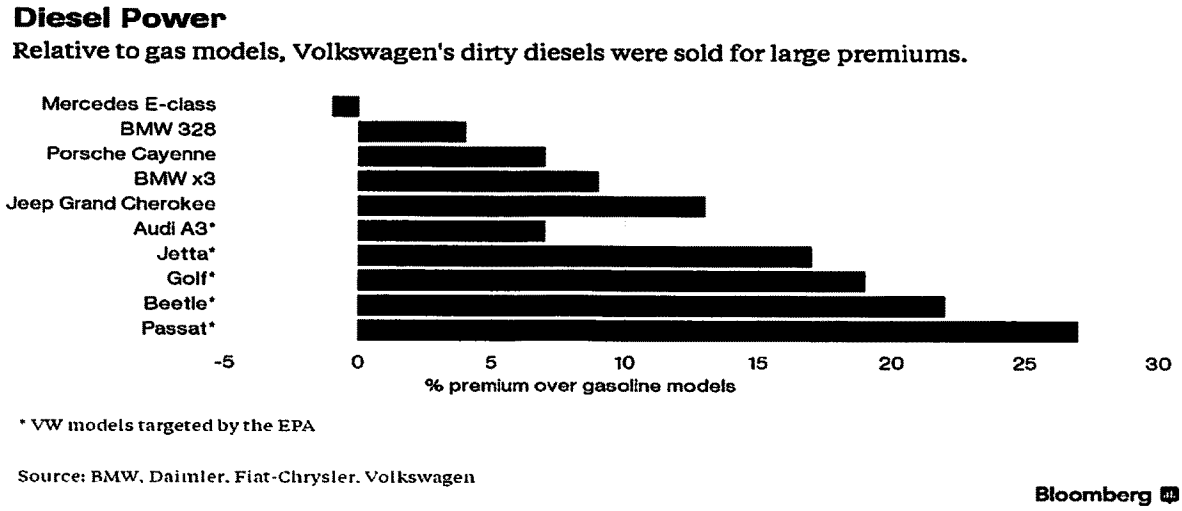
[62] http://mobile.nytimes.com/2015/09/27/business/as-vw-pushed-to-be-no-1-ambitions-fueled-a-scandal.html?referer.

[63] http://www.greencarreports.com/news/1080201_vw-diesel-buyers-hybrid-buyers-both-want-fuel-economy-but-beyond-that.

[64] http://www.autosphere.ca/fleetdigest/2013/04/01/volkswagen-surveys-diesel-drivers/. *See also* http://www.cmu.edu/gdi/docs/diesel-and.pdf (noting many key differences between diesel and hybrid car customers).

[65] http://www.clearlybetterdiesel.org/index.html#cleanDiesel.

for Clean Diesel vehicles over those of its competitors.[66]



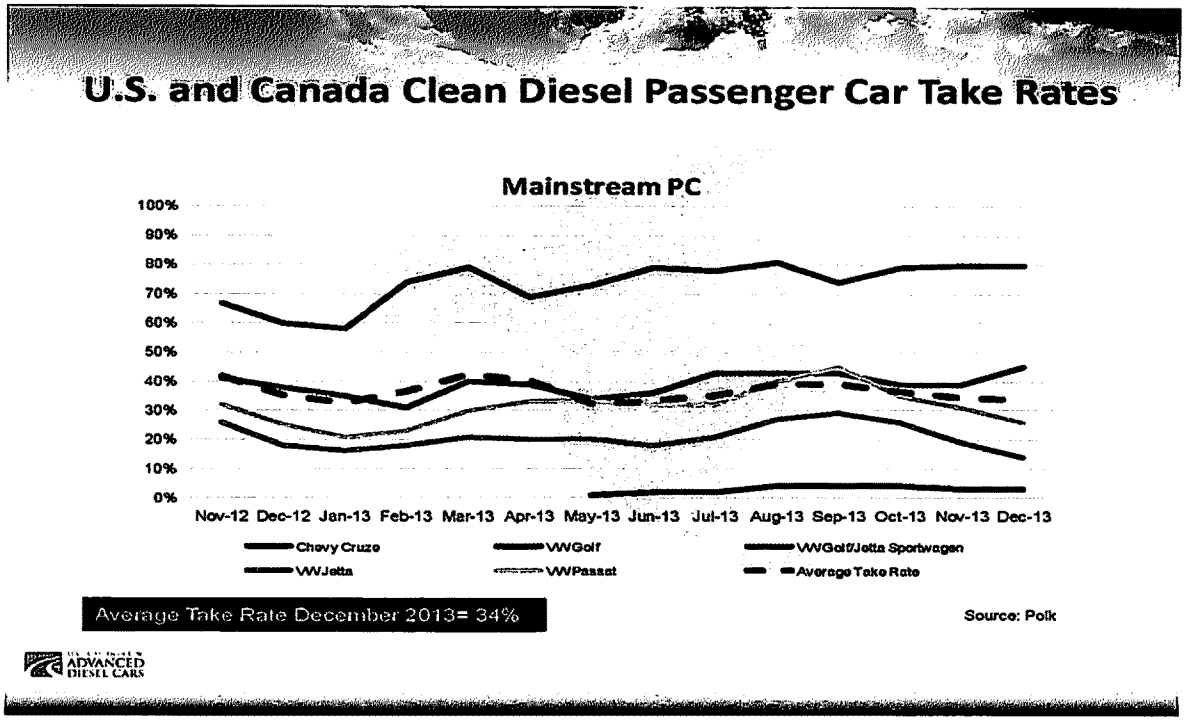
62. As the BloombergBusiness article goes on to explain:

> The math on diesel has never been tidy. The additional mileage is great, but unless one drives a lot, it doesn't really cover the added expense for the engine and for the fuel itself. At current gas prices, the diesel premium on the Passat—some $5,755—would buy enough gas to drive the gas-burning model for about 88,000 miles. **For the majority of diesel drivers, the factor that probably swung the decision was the apparent environmental benefit. The green aspect was the fulcrum.** (Emphases added).

Thus, Volkswagen's false claims about its TDI technology were a driving factor in the premium prices it charged consumers for such technology. As noted above, VWAG has taken full responsibility for the "economic damage" caused by its illegal conduct.

[66] http://www.bloomberg.com/news/articles/2015-09-23/volkswagen-s-other-diesel-ruse-premium-pricing.

63. A chart contained in a presentation made by CMW Research at the March 2015 DTF conference[67] underscores the differences in take rates between Volkswagen Clean Diesel cars and those made by its competitors:



64. The price premium for Clean Diesel vehicles is also reflected in this chart showing the price differentials between gasoline-powered models and Clean Diesel models of Volkswagen's own cars:

Clean Diesel Price Premium				
Mode	**Base**	**Mid-Level**	**Top-Level**	**Average**
VW Jetta	$2,860.00	$1,570.00	$1,030.00	$1,820.00
VW SportWagen	$5,570.00	$1,680.00	$0.00	$2,416.67
VW Golf	$2,400.00	$1,000.00	$1,000.00	$1,466.67
VW Golf	$2,950.00	$1,000.00	$1,000.00	$1,650.00
VW Beetle	$4,635.00	$4,920.00	$0.00	$3,185.00
VW Beetle	$4,080.00	$530.00	$700.00	$1,770.00
VW Passat	$5,755.00	$2,845.00	$2,135.00	$3,578.33

[67] http://cleandieseldelivers.com/media/Take-Rate-Slides-March-2014.pdf.

Audi A3	$2,300.00	$2,300.00	$2,300.00	$2,300.00
Average	$3,818.75	$1,980.63	$1,020.63	$2,273.33

E. Volkswagen's False Advertising.

65. Volkswagen, as part of its plan to increases sales and market share in the United States, increased its emphasis on diesel-powered cars and began marketing these cars heavily to the United States public beginning in 2008. It emphasized the TDI Clean Diesel cars' environment-friendly engine, excellent gas mileage, and high-quality performance. In one advertisement (which, as of this writing, was available on Audi's website after the scandal surfaced and is attached as Exhibit 5 to the Complaint),[68] for example, Volkswagen claimed:

> Getting more from less. Audi pioneered TDI® clean diesel engines to deliver more torque, lower fuel consumption and reduce CO2 emissions, compared to equivalent gasoline engines. The result of this revolutionary engineering delivers remarkable performance, while achieving increased fuel economy.

66. Another advertisement by VWAG for Clean Diesel cars asserts that

> This ain't your daddy's diesel. Stinky, smoky, and sluggish. These old diesel realities no longer apply. Enter TDI Clean diesel. Ultra-low-sulfur fuel, direct injection technology, and extreme efficiency. We've ushered in a new era of diesel.[69]

This internet advertisement is attached as Exhibit 6 to the Complaint.

67. Volkswagen's advertising relentlessly touted the supposed fuel efficiency and environmental features of its Clean Diesel TDI vehicles. In 2009, Volkswagen introduced its "Meet the Volkswagens" campaign, which promoted "fuel efficiency, green credentials, cost of ownership and safety," and compared Volkswagen's diesel passenger cars to its competitors. According to Tim Ellis, Volkswagen's marketing chief, the goal of this advertising campaign was to "grow the brand in the U.S."[70] This campaign, among other things, included social media links

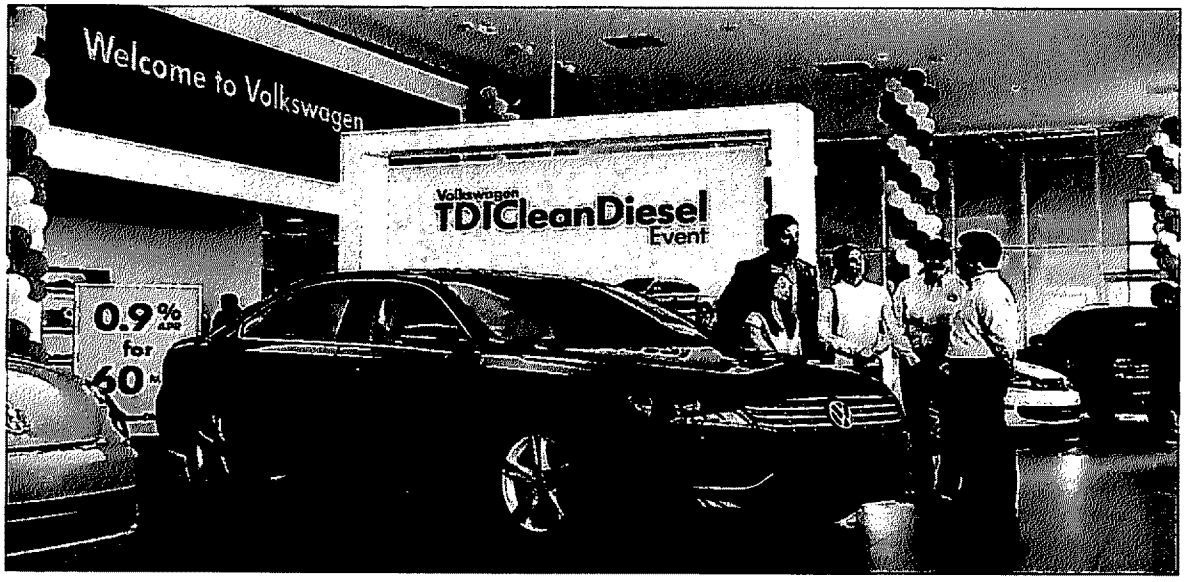
69 https://web.archive.org/web/20150330110301/http://www.vw.com/features/clean-diesel/.

70 http://abcnews.go.com/Business/story?id=7493781.

to a blog (tdi.vw.com/tdi), which focused on Volkswagen's TDI clean diesel model.

68. Between 2011 and 2013, Volkswagen spent more than $2.9 billion annually on advertising world-wide; many of those advertising dollars were directed at the United States public. Volkswagen issued hugely popular videos featuring the Golden Sisters, who purported to debunk the myths about polluting diesel cars.[71] Other videos that were highly successful included a "Truth or Dare" effort started in 2009 that was about "debunking the myths on clean diesel and fueling the passion of existing diesel owners"; a 2009 Audi video that proclaimed "diesel, no longer a dirty word"; and a Passat "being a Mom" video, all of which can be viewed on the *New York* magazine website.[72] Another well-known video showed German engineers of TDI Clean Diesel vehicles earning their "angel's wings."[73]

69. Volkswagen also used point-of-purchase displays at the showrooms of Volkswagen Authorized Dealers such as the one depicted below:



[71] http://blog.caranddriver.com/vws-hilarious-new-tdi-diesel-ads-return-excellent-viral-mileage/.

[72] http://nymag.com/daily/intelligencer/2015/09/vws-clean-diesel-ads-now-make-us-feel-dirty.html.

[73] https://www.youtube.com/watch?v=fwkPEza9FPw.

70. As VWoA's Mark Barnes put it, the TDI Clean Diesel cars were "fantastic power train[s]" with "very good fuel economy." Yet "[i]t's also good for the environment because it puts out 25% less greenhouse gas emission than what a gasoline engine would. And thanks to the uniqueness of the TDI motor, it cuts out the particulate emissions by 90% and the emissions of nitrous oxide are cut by 95%. So a very very clean running engine. Clean enough to be certified in all 50 states."[74]

71. In television and print advertisements and in social media, Volkswagen strived to present its Clean Diesel TDIs as the environmentally-friendly, fuel-efficient, fun-to-drive and reasonably priced passenger car. As noted above, Volkswagen's sham advertising campaign was a success. Unfortunately, all of these accolades were based on a sham perpetrated by Volkswagen for seven years.

F. Volkswagen's Defeat Device.

72. As noted above, Volkswagen's defeat device is described as a "sophisticated software algorithm" that detects when the car is undergoing emissions testing. The algorithm used information about how the car was being steered, how long the engine ran and atmospheric pressure to "precisely track" the conditions that corresponded to a federal emissions test, according to the EPA. During emissions testing, the software "turns on" the car's full emissions control system in order to pass the test. Under normal driving situations, however, these emissions control systems are ***turned off***, allowing the cars to spew as much as 40 times the allowable amount of NOx into the air. As an EPA spokesman noted, the defeat device was "particularly difficult for us to detect."[75] This ruse went undetected for seven years, although as noted above, Bosch and one

[74] http://www.businessinsider.com/volkswagen-preps-for-a-diesel-revolution-2009-10.

[75] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagons-deception-the-recall-that-never-fixed-any-cars/. A useful timeline of how the scandal came to light is provided on the website of Cars.com: https://www.cars.com/articles/vw-diesel-crisis-timeline-of-events-1420681251993/.

of VWAG's own engineers complained about it to the company.

73. One technology blog has described Volkswagen's defeat device as follows:

> The method by which Volkswagen diesel cars were able to thwart emissions tests and spew up to 40X the nitrogen oxide levels set by the Environmental Protection Agency was relatively simple. It was more likely no more than a single line of code used to detect when an emissions test was being performed and place the emissions system in an alternate mode — something as simple as a software "on/off" switch. Volkswagen AG CEO Martin Winterkorn, who stepping down as the result of his company's scandal, has said he had no knowledge of the emissions cheat, but software dev/test audit trails are almost certain to pinpoint who embedded the code and who authorized it. You can actually see who asked the developer to write that code," said Nikhil Kaul, a product manager at test/dev software maker SmartBear Software. "Then if you go upstream you can see who that person's boss was...and see if testing happened...and, if testing didn't happen. So you can go from the bottom up to nail everyone."[76]

74. As also noted above, 482,000 vehicles were described as affected, with over 50,000 in the state of California.[77]

75. In 2013 and again in 2014, the International Council for Clean Transportation ("ICCT") published studies showing serious discrepancies between laboratory and in-use emissions of certain cars, including VW TDI Diesel cars used in Europe.[78] A decision was made to test American Clean Diesel cars to show that they were success stories; the opposite turned out to be the case. The ICCT, in conjunction with researchers at and West Virginia University's Center for Alternative Fuels, Engines and Emissions ("CAFEE") conducted on-road emissions tests on three vehicles sold in the United States: a 2013 TDI Passat, a 2012 TDI Jetta, and a BMW X5

---

[76] http://developers.slashdot.org/story/15/09/24/1423225/how-did-volkswagen-cheat-emissions-tests-and-who-authorized-it.

[77] http://www.latimes.com/business/autos/la-fi-hy-california-dmv-vw-diesel-20150921-story.html. This number excludes unregistered vehicles.

[78] http://theicct.org/sites/default/files/publications/ICCT_LabToRoad_20130527.pdf; http://www.theicct.org/sites/default/files/publications/ICCT_LaboratoryToRoad_2014_Report_English.pdf)

SUV. These researchers found that for the Passat and Jetta, emissions were far higher than the emissions generated in the laboratory by CARB. The Jetta exceeded United States NOx emissions standard by 15 to 35 times, and the Passat by five to 20 times. In laboratory testing by CARB, in contrast, these same vehicles complied with United States NOx emissions standards. The CAFEE report is attached as Exhibit 7 to the Complaint. ICCT brought the information to the attention of CARB and the EPA, who commenced their own investigations and contacted Volkswagen. Volkswagen chalked the discrepancies up to "various technical issues and unexpected in-use conditions", but agreed in December of 2014 to recall approximately 500,000 vehicles in order to apply a "software patch."[79]

76. After the remediation, CARB in May of 2015 tested a 2012 TDI Passat on the road and in the laboratory. It found some improvement in in-use NOx emissions, but not enough. An article in the *Philly Voice* describes what happened next.

> On July 8, CARB shared its results with VW, but there was no change in Volkswagen's position. Some officials privately questioned whether Volkswagen was deliberately violating the federal Clean Air Act by installing defeat devices -- software programmed to switch engines to a cleaner mode during official emissions testing, according to a person involved in the process.
>
> During normal driving, the software then shuts off, enabling cars to emit as much as 40 times the legal limit of pollutants.
>
> In early August, Oliver Schmidt, who followed [Norbert] Krause and preceded [Stuart] Johnson in VW's U.S. engineering and environmental office, attended a conference in Traverse City, Michigan and told regulators Volkswagen stood by its conclusions that the problem was technical, people involved said.[80]

77. Then, on August 21, there was a complete reversal. The *Philly Voice* article goes on to describe what happened:

> After more than a year of stonewalling investigators, Volkswagen stunned two senior officials with the U.S. Environmental Protective Agency and California's environmental watchdog by admitting the automaker hacked its own cars to deceive U.S.

[79] http://www.cnbc.com/2015/09/24/.

[80] http://www.phillyvoice.com/year-stonewalling-volkswagen-stunned-regulators/.

> regulators about how much their diesel engines pollute.
>
> That disclosure on Aug. 21, confirmed by two people with knowledge of the exchange, shows Volkswagen buckled to pressure from environmental regulators almost a month earlier than the scandal was made public. The admission to regulators came after a year during which VW officials insisted to regulators that tests on its diesel cars showing a spike in pollution levels on the road were in error.
>
> ****
>
> At first, regulators were surprised that Volkswagen would make its confession at the conference, held in Pacific Grove, California. Minutes before Christopher Grundler, director of the EPA's transportation and air quality office, was to deliver a 9 a.m. speech to the conference, a Volkswagen representative told him about the deception. At the same meeting, representatives of the California Air Resources Board, a state agency that had been pushing VW hard, were also given a verbal notice of the deception, people with knowledge of the events said.
>
> Volkswagen declined to comment on the sequence of events described to Reuters. It isn't clear which VW representative delivered the news of the deception to Grundler and the CARB. Stuart Johnson, head of VW's engineering and environmental office in the United States, was registered to attend the Aug. 21 conference, which was organized by the University of California, Davis. Johnson, who still works for VW in Auburn Hills, Michigan, did not respond immediately to a request for comment.

78. Volkswagen was faced with the threat that the EPA it would not certify any of its 2016 models for sale in the United States until the questions surrounding the emissions discrepancies were answered. Volkswagen admitted that it relied upon a "second calibration" in the vehicles that was intended to run only during certification testing. This second calibration was triggered when a highly sophisticated software algorithm determined – after measuring factors like the position of the steering wheel, the vehicle's speed, pedal movement, and even barometric pressure – that the car was being tested. Then it would configure the engine to reduce emissions of NOx. As David Clegern of CARB explained, "[w]e met with VW on several occasions and they continued to dispute our data, so we'd return to the lab. Over time, VW had no other explanations left, and it was our lab staff who actually got VW to admit that there was, in fact, a defeat device."[81]

[81] http://www.foxnews.com/leisure/2015/09/22/for-7-years-vw-software-thwarted-pollution-regulations/.

As another CARB spokesperson told the *Washington Post*, "[t]hey basically ran out of excuses."[82]

79. The scandal surfaced on September 18, 2015, when CARB and the EPA announced that VWAG, Audi and VWoA had illegally installed emissions testing "defeat devices" in the aforementioned vehicles. *See* Appendices 1 and 2. The EPA found violations of 42 U.S.C. §§7522(a), 7522(a)(1) and 7522(a)(3)(B), as well as 40 C.F.R. §§86.1854-12(a)(3)(ii) and 86.1854-12(a). The EPA identified the following affected vehicles:

Model Year	EPA Test Group	Make and Model(s)
2009	9VWXV02.035N	VW Jetta, VW Jetta Sportwagen
2009	9VWXV02.0U5N	VW Jetta, VW Jetta Sportwagen
2010	AVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2011	BVWXV02.0U5N	VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2012	CVWXV02.0U4S	VW Passat
2013	DVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2013	DVWXV02.0U4S	VW Passat
2014	EVWXV02.0U5N	VW Beetle, VW Beetle Convertible, VW Golf, VW Jetta, VW Jetta Sportwagen, Audi A3
2014	EVWXV02.0U4S	VW Passat
2015	FVGAV02.0VAL	VW Beetle, VW Beetle Convertible, VW Golf, VW Golf Sportwagen, VW Jetta, VW Passat, Audi A3

80. As noted above, Horn of VWoA admitted that Volkswagen was dishonest with both customers and regulators and Huber of VWAG called the matter a "moral and political disaster."

[82] http://www.washingtonpost.com/news/wonkblog/wp/2015/09/22/anatomy-of-volkswagonsdeception-the-recall-that-never-fixed-any-cars/.

81. Volkswagen has ordered its dealers to cease selling the Class Vehicles[83] and has set aside a minimum of 6.5 billion Euros ($7.2 billion) to deal with the fallout from this catastrophe, which it now concedes involved 11 million vehicles worldwide. An internal memorandum issued on September 22 details this:

Wolfsburg, 22 September 2015

Volkswagen AG has issued the following information:

Volkswagen is working at full speed to clarify irregularities concerning a particular software used in diesel engines. New vehicles from the Volkswagen Group with EU 6 diesel engines currently available in the European Union comply with legal requirements and environmental standards. The software in question does not affect handling, consumption or emissions. This gives clarity to customers and dealers.

Further internal investigations conducted to date have established that the relevant engine management software is also installed in other Volkswagen Group vehicles with diesel engines. For the majority of these engines the software does not have any effect.

Discrepancies relate to vehicles with Type EA 189 engines, involving some eleven million vehicles worldwide. A noticeable deviation between bench test results and actual road use was established solely for this type of engine. Volkswagen is working intensely to eliminate these deviations through technical measures. The company is therefore in contact with the relevant authorities and the German Federal Motor Transport Authority (KBA – Kraftfahrtbundesamt).

To cover the necessary service measures and other efforts to win back the trust of our customers, Volkswagen plans to set aside a provision of some 6.5 billion EUR recognized in the profit and loss statement in the third quarter of the current fiscal year. **Due to the ongoing investigations the amounts estimated may be subject to revaluation.**
Earnings targets for the Group for 2015 will be adjusted accordingly.

Volkswagen does not tolerate any kind of violation of laws whatsoever. It is and remains the top priority of the Board of Management to win back lost trust and to avert damage to our customers. The Group will inform the public on the further progress of the investigations constantly and transparently.

82. Volkswagen has indicated it will initiate a recall and remediation of the Class Vehicles, but there is no "fix" that can be achieved that would not result in lesser mileage per gallon or degraded performance, two of the key attributes on which TDI Clean Diesel cars were sold.

---

[83] *See* http://pics3.tdiclub.com/data/3209/stop-sale-note3.pdf.

> Experts Reuters spoke to indicate that two potential fixes could be needed for the two types of emissions control systems featured on 482,000 cars in the U.S., complicating the recall and refit process. Some experts opined that just a software solution could make the affected vehicles compliant with EPA regulations, reducing the performance characteristics of the engines in the process, while others suspect that a hardware solution may be needed for older vehicles without the urea injection system.
>
> A couple of experts warned that the potential solution could involve significantly increased consumption of urea, necessitating fill-ups at more frequent intervals such as every 5,000 miles, in addition to reducing the performance of the engines.[84]

The same point was made by the West Virginia AG in a complaint filed on October 2 against Volkswagen for civil penalties. It is attached as Exhibit 8. In that complaint, the West Virginia AG notes that "Volkswagen will not be able to comply with the EPA [recall] order to make the Affected Vehicles comply with emissions standards without substantially degrading their performance and fuel efficiency to a level below that advertised by Volkswagen, and below that experienced by consumers prior to, or when they purchased their vehicles." Thus, there is no valid "cure" for Volkswagen's conduct.

83. Nor can any recall cure the tarnished reputation of Volkswagen's TDI Clean Diesel vehicles and the substantial diminution of their resale value. The Kelley Bluebook has reported that prices for used Volkswagen diesel cars have declined by 21% in the last few weeks, reflecting the aftermath of Dieselgate.[85] Thus, customers not only overpaid when they bought the Class Vehicles, but have suffered a significant diminution of the resale value of their vehicles. Indeed, a survey of 460 fleet buyers in the United Kingdom revealed that 49% of them were reconsidering their contracts with Volkswagen in the aftermath of the Dieselgate revelations.[86]

84. As noted above, the Executive Committee of the Board that accepted his retirement

---

[84] http://autoweek.com/article/car-news/vw-diesel-emissions-fix-may-require-2-solutions.

[85] http://www.latimes.com/business/autos/la-fi-hy-auto-sales-20151001-story.html.

[86] http://www.dailymail.co.uk/money/news/article-3258793/VW-scandal-deepens-revealed-half-company-car-buyers-ditch-embattled-firm.html.

said that it "recognizes the economic damage caused" as well as the "loss of trust" among customers. No recall and supposed remediation can correct that.

85. A survey of vehicle owners conducted by AutoPacific[87] further reveals consumer disgust with Volkswagen. Only one in four have a positive opinion of Volkswagen, compared to three in four before the scandal. The corresponding figures for Audi were 29%, as opposed to 69%. Sixty-four percent of the survey respondents say they do not trust Volkswagen.

86. But the illegal conduct by Volkswagen has not just resulted in economic damage and loss of consumer trust. It has caused **the death of dozens of people in the United States over the last seven years and degraded the health of many more**. On October 3, Associated Press ("AP") laid out the facts.[88] AP calculated exhaust pollution year by year, starting with the ten to 40 times emissions level estimate by the EPA and then factored in mileage and car number totals from the Kelley Blue Book. It came up with a range of NOx pollution caused by the Class Vehicles and then took it to scientists who modeled mortality rates, which were confirmed by a dozen experts in emissions, risk and public health, none of whom were environmental advocates or representatives of automobile manufacturers. The results are depicted in the chart that follows.

//

//

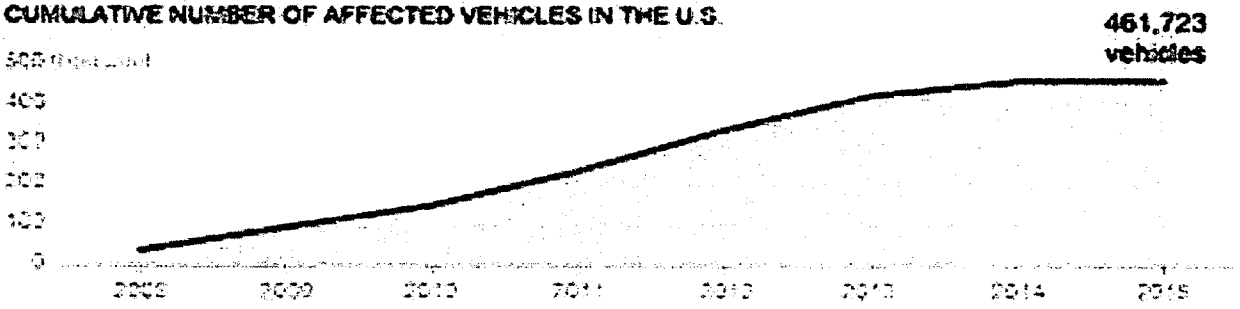
[87] http://www.autopacific.com/news-app/story.248/title.volkswagen-s-reputation-takes-big-hit-with-vehicle-owners-autopacific-predicts-tough-road-ahead.

[88] http://bigstory.ap.org/article/a6925f0af82e44aaa1a1ed4b55d030f6/ap-analysis-dozens-deaths-likely-vw-pollution-dodge.

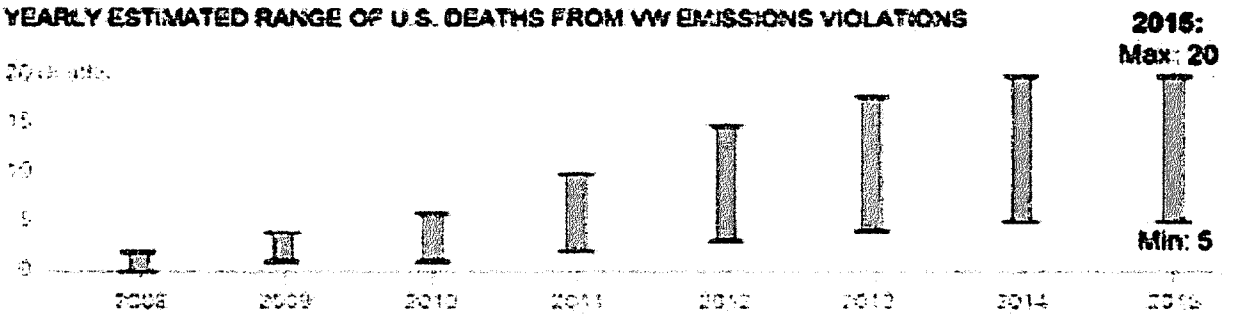
Calculating human toll of VW emissions problems

U.S. pollution resulting from Volkswagen's dodging of emissions tests is enough to have caused dozens of deaths since 2008. An AP analysis calculated upper and lower limits of pollution using the number of affected vehicles each year and average mileage. Scientists used that data in epidemiological computer models to estimate a range of deaths.

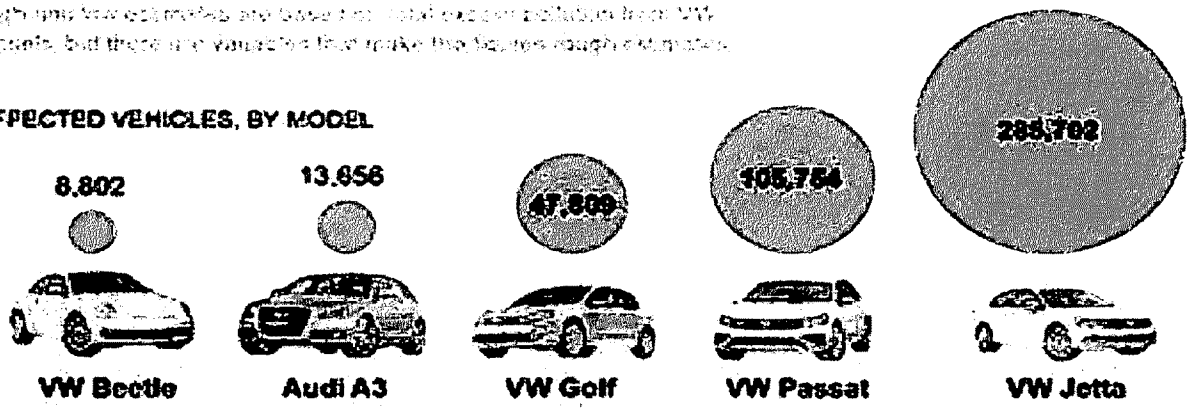
CUMULATIVE NUMBER OF AFFECTED VEHICLES IN THE U.S.



YEARLY ESTIMATED RANGE OF U.S. DEATHS FROM VW EMISSIONS VIOLATIONS



AFFECTED VEHICLES, BY MODEL



87. As the AP article notes, the Class Vehicles spewed enough NOx over the course of seven years to significantly degrade the environment in urban areas. Eric Schneiderman, the New York AG has said that "[t]he stakes could not be higher for the health and safety of our communities who, if Volkswagen's own admissions are true, have for years been breathing air containing excess pollution from their vehicles."[89] Harris County Texas (where the City of Houston is located) has already sued Volkswagen for $100 million in harm to air quality.[90]

88. As noted in the *Minneapolis Star-Tribune* in a follow-up piece on the AP story:

> Computer software allowed VW diesel cars to spew between 10 to 40 times more nitrogen oxides (NOx) than allowed by regulation, making this "clearly a concern for air quality and public health," said Janet McCabe, acting air quality chief for the U.S. Environmental Protection Agency.
>
> Nitrogen oxides mostly form smog — that murky, dirty air that makes it hard to see and for some people to breathe — but also amplify a deadlier, larger problem: tiny particles of soot. Numerous medical studies show those tiny particles cause about 50,000 deaths a year in the United States, mostly from heart problems.
>
> Nitrogen oxides can travel hundreds of miles, so pollution spewed in Pittsburgh can be felt on the East Coast, [Carnegie Mellon environmental engineer Professor Peter] Adams said.
>
> Experts calculate how much pollution costs society by looking at the value of lost lives. In this case, Adams and other said the lost lives — valued at $8.6 million apiece — overwhelm other costs such as lost work days or hospital costs. The overall annual cost of the extra pollutants from the VW diesels ranged from $40 million to $170 million, environmental engineering professors calculated. "Even the small increase in NOx from VW diesel emissions is likely to have worsened pollution along the roadways where they have traveled, and affected the lives of hundreds of thousands of people," said Dan Greenbaum, president of the Health Effects Institute in Boston.

---

[89] http://mobile.nytimes.com/2015/10/03/business/us-states-jumping-into-investigation-of-vw-emissions-deception.html?_r=0&referer=https://www.google.com/.

[90] http://www.wsj.com/articles/u-s-justice-department-conducts-criminal-probe-of-volkswagen-sources-say-1442869059.

> "To say millions of people of people are breathing poor air as the result of that is not off the mark," said Greenbaum, who runs the institute that is funded by both the EPA and the auto industry to serve as an independent arbiter of the science.[91]

89. The revelation of the scandal has led to numerous consequences in the United States. The DOJ is conducting a criminal probe of Volkswagen.[92] AGs in 30 states have initiated their own investigation.[93] A Texas judge has issued a temporary restraining order preventing the Class Vehicles from being sold within the state. *See* Exhibit 9 to the Complaint. The Subcommittee of Oversight & Investigations of the Energy & Commerce Committee of the United States House of Representatives has initiated an investigation and sent letters to Volkswagen and the EPA.[94] Horn has said he will testify before the committee on October 8.[95] Fred Upton, the chairman of the full committee, has stated that "[t]he very notion of a carmaker intentionally violating our environmental laws is beyond belief....[R]eports of Volkswagen selling cars with devices aimed at skirting the law cannot, and will not be tolerated. Attempting to deceive regulators and customers is a double whammy of betrayal."[96] Nearly 200 private lawsuits have been filed, many of them class actions. Among those class actions, most involve class claims for individual statewide classes, as opposed to federal claims for nationwide classes.

90. Outside the United States, several countries are investigating Volkswagen's

[96] http://energycommerce.house.gov/press-release/suboversight-schedules-volkswagen-hearing-october-8.

conduct.[97] Switzerland has banned the sale within its borders of certain Volkswagen TDI Diesel cars sold in Europe.[98] Prosecutors in Paris have launched an investigation for suspected "aggravated" deception of affected vehicles sold in France; French Environment Minister Segolene Royal called Volkswagen's conduct "a form of theft from the taxpayer and the state."[99] The Italian antitrust authority has also commenced an investigation, saying "Volkswagen's claims about emissions and certifications in advertising campaigns and information brochures distributed by dealers might have induced consumers to make an error in their choice."[100]

91. As noted above, Volkswagen has set aside $7.2 billion to deal with the costs of the scandal. That will not be nearly enough. James E. Tierney, a former AG in Maine, has been quoted as saying that the costs to Volkswagen might be "'incalculable,' with each false advertisement to consumers, for example, carrying a potential penalty. 'This product was designed to operate illegally, and that is very serious.'"[101]

//

//

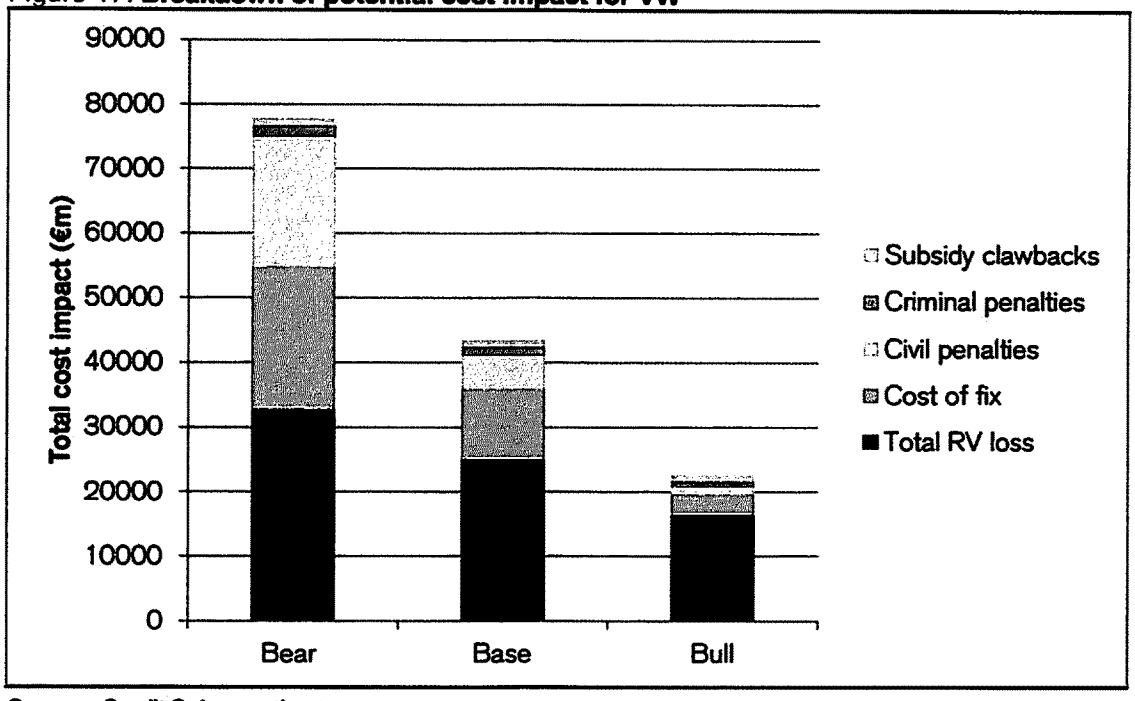
92. Nonetheless, some attempts at calculation have been made. On October 2, Credit Suisse disseminated an analysis showing Volkswagen's anticipated costs in a "bull" scenario (where events turned out favorably to it), a "base" scenario, and a "bear" scenario (where events turned out unfavorably).[102] The "bull" scenario was $25.6 billion in costs, while the "bear" scenario was $87.1 billion. The analysis is summarized in the following chart:

Figure 17: **Breakdown of potential cost impact for VW**



Source: Credit Suisse estimates

As can be seen, costs associated with criminal and civil penalties make up a significant portion of the differing amounts. Credit Suisse also predicts that Volkswagen's stock may decline another 20%.

VI. CLASS ACTION ALLEGATIONS.

93. Plaintiffs bring this action both on behalf of themselves, and as a class action pursuant to Federal Rules of Civil Procedure 23(a) and (b)(3), on behalf of the following class (the

[102] http://www.businessinsider.com/credit-suisse-volkswagen-shares-could-fall-another-20-2015-10?r=UK&IR=T.

VW FOIA, EPA 06/20/2017 2017-FFP_031105

"Class").

> All persons and entities who purchased or leased a Class Vehicle from a Volkswagen Authorized Dealer in the United States. Excluded from the Class are Defendants, their parent companies, subsidiaries and affiliates, any co-conspirators, all governmental entities, and any judges or justices assigned to hear any aspect of this action.

The Class includes subclasses of persons located in California and Virginia. These will be referred to herein as the "California Subclass" and the "Virginia Subclass."

94. Plaintiffs do not know the exact number of Class and Subclass members but believe based on published reports that there are more than 482,000 Class members, geographically dispersed throughout the United States such that joinder of all class members is impracticable. The identity of Class members can be determined from the internal records of Volkswagen.

95. Plaintiffs' claims are typical of the claims of the Class and Subclasses in that Plaintiffs purchased or leased a Class Vehicle from a Volkswagen Authorized Dealer in the United States. All Class and Subclass members were damaged by the same wrongful conduct of Defendants and their co-conspirators as alleged herein, and the relief sought is common to the class.

96. Common questions of law and fact predominate over any individual questions. These questions include, but are not limited to:

- Whether Volkswagen unlawfully acquired a monopoly in the Clean Diesel Car Market;
- Whether the Clean Diesel Car Market is a properly defined product market for purposes of Section 2 of the Sherman Act;
- Whether Volkswagen's acquisition and/or maintenance of a monopoly in the Clean Diesel Car Market had the effect of increasing to supracompetitive levels the retail prices of Class Vehicles;
- Whether Volkswagen violated the CAA and applicable regulations;
- Whether Volkswagen violated California Pollution Control laws and applicable

regulations;

- Whether Volkswagen's conduct violated RICO;
- Whether the Volkswagen RICO Enterprise as defined herein is a cognizable RICO enterprise;
- Whether Volkswagen committed federal mail and wire fraud, thus establishing predicate acts under RICO:
- Whether Volkswagen engaged in a pattern of racketeering activity;
- Whether Plaintiffs and Class members were injured in their business or property, and, if so, what is the appropriate measure of their damages;
- Whether Volkswagen misrepresented the environmental impact of its Class Vehicles;
- Whether Volkswagen misrepresented the Class Vehicles' emission standards compliance, fuel efficiency or performance;
- Whether Volkswagen violated the Magnuson-Moss Warranty Act;
- Whether Volkswagen violated California's Consumer Legal Remedies Act;
- Whether Volkswagen violated California's Unfair Competition Law;
- Whether Volkswagen violated California's False Advertising Law;
- Whether Volkswagen violated Virginia's Consumer Protection Law;
- Whether Volkswagen committed fraudulent concealment;
- Whether Volkswagen was unjustly enriched;
- Whether Plaintiffs and the other members of the Class and Subclasses were injured by Defendants' conduct, and, if so, the appropriate classwide measure of damages for Class members; and
- The scope of any injunctive and other equitable relief to which Plaintiffs and the other members of the Class and Subclasses are entitled.

97. These and other questions of law and fact are common to the Class and Subclasses

VW FOIA, EPA 06/20/2017 2017-FFP_031107

predominate over any questions affecting only individual Class members.

98. Plaintiffs' claims are typical of the claims of the Class and Subclasses because Plaintiffs purchased a Class Vehicle from a Volkswagen Authorized Dealer in the United States.

99. Plaintiffs will fairly and adequately represent the interests of the Class and Subclasses in that they have no conflict with any other members of the Class and Subclasses. Furthermore, Plaintiffs have retained competent counsel experienced in antitrust, class action, and other complex litigation.

100. Defendants have acted on grounds generally applicable to the Class, thereby making final injunctive relief appropriate with respect to the Class and Subclasses as a whole.

101. This class action is superior to the alternatives, if any, for the fair and efficient adjudication of this controversy. Prosecution as a class action will eliminate the possibility of repetitive litigation. There will be no material difficulty in the management of this action as a class action. The prosecution of separate actions by individual Class and Subclass members would create the risk of inconsistent or varying adjudications, establishing incompatible standards of conduct for Defendants.

CAUSES OF ACTION

FIRST CLAIM

Violation of the Section 2 of the Sherman Antitrust Act (Monopolization) (15 U.S.C. § 2).

102. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

103. The relevant product market for purposes of Plaintiffs' claims under Section 2 of the Sherman Act is the Clean Diesel Car Market, which, as noted above, consists of: (a) the product market of Clean Diesel passenger cars and (b) a geographic market consisting of the United States. All diesel fuel sold in the United States during the relevant period is "clean diesel fuel", with 97% less sulfur than the diesel sold in the 1970s. Similarly, all diesel cars sold in the United States since 2007 (which have had to meet the same emission standards as gasoline engines) have advanced engines and emissions control technology that make the diesel engines cleaner than in

VW FOIA, EPA 06/20/2017 2017-FFP_031108

the past, are able to take advantage of the clean diesel fuel, and use exhaust systems that further reduce diesel engine emissions.

104. As Volkswagen's own market research and market research by others described above have demonstrated, clean diesel cars are not in the same relevant market as gasoline or even hybrid cars of similar size and class. Diesel engines require the use of a different and more expensive fuel than gasoline-powered engines, can travel much greater distances on a single tank of fuel, and are more expensive. Unlike hybrid or electric vehicles, diesel-powered vehicles do not have to be plugged in, can travel greater distances without refueling or plugging in, and -- particularly with more recent compression technology like the Volkswagen's TDI engines -- have greater torque, acceleration, and towing power. In addition, the demographics of the clean diesel buyers are distinct from those of hybrid buyers; they are more likely to be male, younger, and less likely to have children.

105. At all relevant times, Volkswagen has been a competitor in the Clean Diesel Car Market, and has maintained significant market share. As the chart presented by Skorupski of VWoA depicted above demonstrates, Volkswagen's share of the Clean Diesel Car Market has been 70% or more during the entire relevant period.

106. Barriers to entry in the Clean Diesel Car Market are high. In addition to the barriers to entry and expansion posed by Volkswagen's anticompetitive conduct, as described in this Complaint, other barriers to entry include: high research and development costs, high costs of making diesel engines that are EPA- and CARB-compliant, and high capital costs.

107. Consumers, experts and commentators in the automotive industry, and the automobile manufacturers themselves, including Volkswagen, all recognize the Clean Diesel Car market as distinct from markets including gasoline, hybrid, or electric cars.

108. Volkswagen has monopoly power in the Clean Diesel Car Market.

109. Through the anticompetitive use of the defeat device and its deception of the EPA, CARB, Plaintiffs, and the Class, Volkswagen has willfully acquired and/or maintained its

VW FOIA, EPA 06/20/2017 2017-FFP_031109

monopoly of the Clean Diesel Car Market. This conduct has harmed competition in that market, and has caused injury to every person that purchased or leased a Class Vehicle. The purchase or lease price was higher than it would have been in a competitive market; the supply and selection of products was lower than it would have been in a competitive market; innovation has been stifled; and the number and effectiveness of competitors in that Market has been diminished by unlawful means.

110. As a result of this violation of law, the price of Class Vehicles was higher than it otherwise would have been.

111. There is no legitimate business justification for the conduct described in this Complaint which has facilitated Volkswagen's monopolization of the Clean Diesel Car Market.

112. The anticompetitive conduct described in this Complaint has caused injury to the business or property of Plaintiffs and members of the Class and is in violation of section two the Sherman Act (15 U.S.C. § 2).

113. Plaintiffs are buyers of Class Vehicles in the Clean Diesel Car Market; they are thus direct participants in the monopolized market. Volkswagen issues warranties directly to Class Vehicle buyers. The Volkswagen Authorized Dealers[103] obtain Class Vehicles from Volkswagen (through its American subsidiaries) that are certified to be EPA- and/or CARB-compliant and, as noted above, have visible stickers to that effect. The emissions testing that is used to justify those certifications is undertaken by VWoA in the United States.[104] Class Vehicles so labeled are

[103] In a recent recall notice unrelated to Dieselgate, Volkswagen has indicated that it has 652 authorized dealers in the United States. https://media.vw.com/doc/1456/volkswagen_issues_voluntary_recall-tiguan_label_recall_release-17883691505565f01ccc4bb.pdf. Their names and addresses can be identified through Volkswagen's records. The Volkswagen Authorized Dealers have a 12-person National Dealer Advisory Council that interacts closely with VWoA on such issues as company management.

[104] http://www.manufacturing.net/news/2015/10/vw-pollution-test-site-under-scrutiny-amid-emissions-cheating-scandal.

displayed on the showroom floors of Volkswagen Authorized Dealers. The false certifications by Volkswagen were one of the critical elements of its unlawful scheme of monopolization. The Volkswagen Authorized Dealers were agents of Volkswagen for the purpose of disseminating these false certifications and representations by Volkswagen to customers in order to induce them to purchase TDI Clean Diesel vehicles. In addition, Volkswagen (through its American subsidiaries) sets the Manufacturer's Suggested Retail Price ("MSRP") for Class Vehicles, which includes the premium for the TDI Clean Diesel technology described herein. While Volkswagen Authorized Dealers could charge customers a price less than the MSRP (such as when Volkswagen provides rebates or short-term retail promotions), that lesser price is nonetheless keyed off the MSRP and still contains a portion of the premium for the sham TDI Clean Diesel technology. This case involves retail prices for Class Vehicles paid by consumers like plaintiffs, who are participants in the relevant market and who pay more for those vehicles because of Volkswagen's illegal monopolistic practices.

SECOND CLAIM

Violation of Section 2 of the Sherman Antitrust Act (Attempted Monopolization) (15 U.S.C. § 2).

114. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

115. Volkswagen has acted with specific intent to monopolize the Clean Diesel Car Market as described above through the anticompetitive use of the defeat device and its deception of the EPA, CARB, Plaintiffs, and the Class.

116. There was and is a dangerous probability that Volkswagen will succeed in its attempt to monopolize the Clean Diesel Car Market because Volkswagen controls a large percentage of that market and has the ability to and actually did exclude competitors through the anticompetitive conduct described in this Complaint.

117. Volkswagen's conduct has harmed competition in the Clean Diesel Car Market, making the supply and selection of available Clean Diesel Cars lower than it would be in a competitive market.

VW FOIA, EPA 06/20/2017 2017-FFP_031111

118. There is no legitimate business justification for the conduct described in this Complaint which has facilitated Volkswagen's monopolization of the Clean Diesel Car Market.

119. The anticompetitive conduct described in this Complaint has caused injury to the business or property of Plaintiffs and members of the Class and is in violation of the Sherman Act (15 U.S.C. § 2).

THIRD CLAIM

Violation of the Racketeer Influenced and Corrupt Organizations Act ("RICO") (18 U.S.C. §§ 1962(c), 1964).

120. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

121. Each Plaintiff is a "person" within the meaning of 18 U.S.C. § 1964(c), and each has sustained injury to his or her business or property as a result of Volkswagen's conduct described in this Complaint.

122. Each Defendant is a "person" within the meaning of 18 U.S.C. § 1961(3).

123. Defendants violated 18 U.S.C. §1962(c) by participating in or conducting the affairs of the Volkswagen RICO Enterprise through a pattern of racketeering activity.

124. For the past seven years, Volkswagen has engaged in a deliberate, pre-meditated and continuous effort to deceive Plaintiffs, members of the Class, and federal and state regulators into believing that the Class Vehicles are environmentally-friendly, fuel-efficient, and EPA- and CARB-compliant. Unknown to Plaintiffs, Class members and federal and state regulators, Volkswagen installed pollution control defeat devices into the Class vehicles that turned off the pollution controls when the cars were in normal operating mode.

125. Plaintiffs and Class members had no way of knowing that these systems were disabled by Volkswagen. Pursuant to the CAA, Volkswagen was required to equip its cars with on-board diagnostic systems that trigger a dashboard "check engine" light that alerts the driver of a possible pollution control device malfunction. The Class Vehicles' diagnostic systems did not trigger this "check engine light," because the defeat device was designed to evade EPA and CARB pollution controls.

VW FOIA, EPA 06/20/2017 2017-FFP_031112

126. In dozens of advertising campaigns and statements and in certifications of EPA and CARB compliance Volkswagen has falsely represented the Class Vehicles' "green credentials" and performance.

127. Volkswagen engaged in a common course of conduct and conspiracy with the common purpose of defrauding Plaintiffs and members of the Class into purchasing Class Vehicles at artificially inflated prices.

The Volkswagen RICO Enterprise.

128. Volkswagen conducted the affairs of an association-in-fact enterprise (the "Volkswagen RICO Enterprise") through a pattern of racketeering activity, in violation of 18 U.S.C. § 1962(c).

129. The enterprise engaged in and continues to engage in interstate commerce, and its activities affect interstate commerce.

130. The Volkswagen RICO Enterprise is an association-in-fact enterprise comprised of the Defendants and Volkswagen Authorized Dealers in the United States. Each participant in the Enterprise played a designated, well-defined role in the affairs of the Volkswagen RICO Enterprise.

131. Volkswagen designed, manufactured, and sold to Volkswagen Authorized Dealers the Class Vehicles containing the defeat devices that are the subject of this Complaint. Volkswagen developed the advertising campaigns that misrepresented to Plaintiffs and Class members the true nature of the Class Vehicles, which were not, contrary to Defendants' misrepresentations, environmentally-friendly, fuel-efficient, or EPA- or CARB-compliant. Volkswagen deceptively certified the Class Vehicles as EPA- and CARB-compliant. And Volkswagen lied to CARB and EPA officials about the full nature and extent of the problem.

132. The Volkswagen Authorized Dealers that sold and leased the Class Vehicles to Plaintiffs and members of the Class were a critical element of the Volkswagen RICO Enterprise. Volkswagen sold the Class Vehicles to Volkswagen Authorized Dealers, who then sold or leased

VW FOIA, EPA 06/20/2017 2017-FFP_031113

them to Plaintiffs and members of the Class. Whether or not the Volkswagen Authorized Dealers knew that the Class Vehicles contained defeat devices that made Volkswagen's advertisements and representations false, the Volkswagen Authorized Dealers displayed those advertisements and repeated those misrepresentations. Indeed, Volkswagen required Volkswagen Authorized Dealers to display and repeat those misrepresentations in the Volkswagen and Audi Standard Dealer Agreements.

133. The Volkswagen RICO Enterprise has an ascertainable structure and purpose beyond the scope and commission of Volkswagens' predicate acts and conspiracy to commit such acts. The Enterprise is separate and distinct from Defendants, and functions as a continuing unit. The members of the Enterprise have distinct and separate roles and responsibilities.

134. At all relevant times, Volkswagen operated, controlled or managed the Volkswagen RICO Enterprise. Volkswagen's participation was critical for the success of the scheme to defraud because Volkswagen manufactured the Class Vehicles, designed and installed the defeat devices, and concealed those devices from Plaintiffs, Class members and regulatory authorities.

135. Section 1961(1)(B) of RICO defines "racketeering activity" as any act indictable under 18 U.S.C. §§1341 (mail fraud) and 1343 (wire fraud), among other statutes. As described in this Complaint, Volkswagen's conduct violated both of these laws.

136. Volkswagen conducted the affairs of the Volkswagen RICO Enterprise through a "pattern of racketeering activity," as defined by 18 U.S.C. §1961(5) by committing at least two acts of racketeering activity, *i.e.*, indictable violations of 18 U.S.C. §§1341 and 1343, within the past ten years. In fact, Volkswagen has committed dozens of acts of racketeering activity. Each racketeering act was related, had a similar purpose, involved the same or similar participants and method of commission, had similar results and impacted similar victims, including the Plaintiffs and members of the Class.

137. Defendants' multiple acts of racketeering activity were related to each other and amount to continued racketeering activity, and therefore constitute a "pattern of racketeering

VW FOIA, EPA 06/20/2017 2017-FFP_031114

activity" as defined in 18 U.S.C. §1961(5).

Predicate Act Violations of 18 U.S.C. §§1341 and 1343.

138. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §1341 (mail fraud), placed in post offices and/or in authorized repositories, matter and things to be sent or delivered by the U.S. Postal Service, caused matter and things to be delivered by commercial interstate carriers, and received matter and things from the U.S. Postal Service and/or commercial interstate carriers, including, but not limited to, advertising materials, marketing and sales materials, correspondence, contracts, sales and leasing documents, Certificates of Compliance, communications with the EPA, CARB and other regulatory officials, and other materials relating to the Class Vehicles sold and leased to Plaintiffs and Class members.

139. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §1343 (wire fraud), transmitted and received by wire, matter and things, which include, but are not limited to, advertising materials, marketing and sales materials, correspondence, contracts, sales and leasing documents, Certificates of Compliance, communications with the EPA, CARB, and other regulatory officials, and other materials relating to the Class Vehicles sold and leased to Plaintiffs and Class members.

140. For the purpose of executing the fraudulent scheme described in this Complaint, Volkswagen, in violation of 18 U.S.C. §§1341 and 1343, made numerous material misrepresentations about the Class Vehicles' environmental impact, fuel efficiency, and EPA- and CARB-compliance, and made many material omissions of fact, including concealing that the cars contained defeat devices that rendered them non-compliant with applicable emissions standards. Volkswagen made these misrepresentations and omissions with the intent and effect of inducing Plaintiffs to rely on such misrepresentations and omissions.

141. Defendants' misrepresentations, omissions of material facts, acts of concealment, and failures to disclose, were knowing and intentional, and made for the purpose of deceiving

VW FOIA, EPA 06/20/2017 2017-FFP_031115

Plaintiffs and Members of the Class into purchasing and leasing Class Vehicles.

142. Defendants either knew or recklessly disregarded the fact that the misrepresentations and omissions described above and incorporated herein were material, and Plaintiffs and Class members relied on the misrepresentations and omissions as set forth above.

143. Volkswagen's affirmative and deliberate misrepresentations regarding the Class Vehicles' environmental friendliness, fuel efficiency and performance, and omission of the true facts, were material factors in inducing Plaintiffs and Class members to purchase and lease the Class Vehicles. Plaintiffs and Class members relied on those misrepresentations and omissions and would have not purchased or leased the vehicles in their absence, or, at a minimum, would have paid significantly less than they did.

144. Each act of deception, as described in this Complaint, constitutes a violation of 18 U.S.C. §§1341 (mail fraud) or 1343 (wire fraud), and constitutes an act of "racketeering activity" as defined in 18 U.S.C. §1961(5).

145. As a result, Plaintiffs and Class members have been injured in their business and property within the meaning of 18 U.S.C. §1964(c). Plaintiffs' and Class members' damages include, but are not limited to: purchasing or leasing Class Vehicles that they would not otherwise have purchased or leased; paying more for Class Vehicles than they would have otherwise paid if they had known the true facts concerning the defeat devices; and purchasing Class Vehicles, the value of which has been severely diminished, thus reducing their residual and/or resale value.

146. Volkswagen's RICO violations directly and proximately caused injury to the business and property of Plaintiffs and Class members, and Plaintiffs and Class members are entitled to three times their actual damages, as well as injunctive and other equitable relief, plus their costs and reasonable attorneys' fees.

FOURTH CLAIM

Violation of the Magnuson-Moss Warranty Act (15 U.S.C.§ 2301 *et seq.*)

147. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

148. Plaintiffs and the Class bring this claim under the Magnuson-Moss Warranty Act, 15 U.S.C. § 2301 *et seq.*

149. The Class Vehicles are consumer products as defined in 15 U.S.C. §2301(1).

150. Volkswagen is a supplier and warrantor as defined in 15 U.S.C. §2301(4), (5).

151. Plaintiffs and the Class received written warranties as defined in 15 U.S.C. §2301(6)(A) and/or (B), which Volkswagen has breached.

152. Plaintiffs and the Class are "consumers" as defined in 15 U.S.C. §2301(3). They are consumers because they bought a Class Vehicle and are entitled to enforce both written and implied warranties.

153. Pursuant to 15 U.S.C. § 2310(e), Plaintiffs and the Class are not required to provide Defendants notice of this class action and an opportunity to cure until the time the Court determines the representative capacity of Plaintiffs pursuant to Fed.R.Civ.P. 23.

154. Volkswagen is liable to Plaintiffs and the Class pursuant to 15 U.S.C. § 2310(d)(l) because it breached its written warranties.

155. Further, in connection with the sale of the Class Vehicles, Volkswagen gave an implied warranty under the Act. As part of that implied warranty, Volkswagen warranted that the Class Vehicle complied with all applicable federal and state regulations, including emission regulations. Volkswagen breached the implied warranty of merchantability.

156. Plaintiffs and the Class are entitled to damages caused by Volkswagen's breaches of the warranties, including economic damages based upon either a return of Plaintiffs' and Class Members purchase price; and/or the difference between the price paid for the Class Vehicle as warranted and the actual value of the Class Vehicle as delivered, and consequential damages.

157. In addition, Plaintiffs and the Class are entitled to reasonable attorneys' fees and costs as determined by the Court.

VW FOIA, EPA 06/20/2017 2017-FFP_031117

FIFTH CLAIM

Violations of the Consumers Legal Remedies Act (California Civil Code § 1750 *et seq.*)

158. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

159. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

160. This cause of action is brought pursuant to the California Consumers Legal Remedies Act ("CLRA"), Civil Code §1750, *et seq*. Plaintiffs bring this action on their own behalf and on behalf of the California Subclass, all of whom are similarly situated consumers within the meaning of Civil Code §1781.

161. The acts and practices described in this Complaint were intended to result in the sale of goods, specifically a motor vehicle, in consumer transactions. Volkswagen has violated, and continue to violate California Civil Code § 1770, subdivisions (a)(9), (a)(7), (a)(16), and (a)(5) by:

- Representing to consumers purchasing the Class Vehicles that these vehicles' emissions, fuel efficiency and high performance are as advertised and publicized.
- Representing in their advertising emissions, environmental, fuel efficiency and performance characteristics for the Class Vehicles that are false.

162. Plaintiffs Bourn, Watson, and Verner and the California Subclass members have suffered harm as a result of these violations.

163. Plaintiffs Bourn, Watson, and Verner and California Subclass members have suffered harm as a result of Volkswagen's unlawful conduct because they purchased the Class Vehicles believing, based on Volkswagen's representations, that the Class Vehicles had certain characteristics that made them environmentally friendly, fuel efficient and high performance, when in fact these vehicles cannot have these fuel efficient and performance standards because their emissions do not comply with federal and state laws and regulations. These misrepresentations also resulted in higher purchase prices for the Class Vehicles and the subsequent revelation

VW FOIA, EPA 06/20/2017 2017-FFP_031118

concerning the "defeat devices" will result in lower resale value.

164. Volkswagen concealed from Plaintiffs Bourn, Watson, and Verner accurate information concerning the emissions standards, fuel efficiency and performance of the California Subclass Vehicles.

165. Volkswagen's misrepresentations and omissions described in the preceding paragraphs were intentional, or alternatively, made without the use of reasonable procedures adopted to avoid such errors.

166. Volkswagen, directly or indirectly, has engaged in substantially similar conduct with respect to Plaintiffs Bourn, Watson, and Verner and to each member of the California Subclass.

167. Unless Volkswagen is enjoined from engaging in such wrongful actions and conduct in the future, members of the consuming public will be further damaged by Volkswagen's conduct.

168. Plaintiffs Bourn, Watson, and Verner and the Class are entitled to equitable relief on behalf of the members of the California Subclass in the form of an order, pursuant to Civil Code §1780, subdivision (a)(2)-(5), prohibiting Volkswagen from continuing to engage in the above-described violations of the CLRA. Plaintiffs Bourn, Watson, and Verner and the California Subclass further seek reasonable attorneys' fees under Civil Code §1780(e).

SIXTH CLAIM

Violation of California Unfair Competition Law (Cal. Bus. & Prof. Code § 17200, *et seq.*)

169. Plaintiffs Bourn, Watson, and Verner incorporate by reference each preceding and succeeding paragraph.

170. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

171. California Business & Professions Code §17200, *et seq.* prohibits acts of "unfair competition" which is defined by California Business & Professions Code § 17200 as including

VW FOIA, EPA 06/20/2017 2017-FFP_031119

any "any unlawful, unfair or fraudulent business act or practice ...."

172. Volkswagen has violated and continues to violate California Business & Professions Code §17200's prohibition against engaging in "unlawful" business acts or practices, by, inter alia, the following:

- Violating the CAA and applicable regulations;
- Violating California's Air Pollution Control laws and applicable regulations;
- Violating the Sherman Act;
- Violating RICO;
- Violating the Magnuson-Moss Act;
- Violating the CLRA; and
- Violating California's False Advertising Law.

173. Volkswagen also acted fraudulently and unfairly for purposes of section 17200. Volkswagen's misrepresentations and omissions regarding the Class Vehicles' emissions, environmental standards, fuel efficiency, and performance in their advertising, public statements and marketing were a material factor in inducing Plaintiffs Bourn, Watson, and Verner to purchase their Class Vehicle. Plaintiffs Bourn, Watson, and Verner suffered injury in fact and lost money and/or property as a result of Volkswagen's unlawful business acts and practices and California Subclass members have suffered harm when each was required to pay a purchase price for their Class Vehicles which they never would have purchased if the true facts were known; or paid a price in excess of what a California Subclass member would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics and in the form of decreased resale value of the Vehicles.

174. As a result of Volkswagen's violations of the California Business & Professions Code §17200, *et seq.*, Plaintiffs Bourn, Watson, and Verner and California Subclass members are entitled to equitable relief in the form of full restitution for the inflated sale price of the Vehicles.

VW FOIA, EPA 06/20/2017 2017-FFP_031120

175. Plaintiffs Bourn, Watson, and Verner and California Subclass members also seek an order enjoining Volkswagen from continuing their unlawful business practices and from such future conduct.

SEVENTH CLAIM

Violation of the California False Advertising Law (Cal. Bus. & Prof. Code § 17500, *et seq.*)

176. Plaintiffs Bourn, Watson, and Verner incorporate by reference each preceding and succeeding paragraph.

177. Plaintiffs Bourn, Watson, and Verner bring this Claim on behalf of the California Subclass.

178. Volkswagen violated California's False Advertising Law, Business & Professions Code §17500, *et seq.*by using false and misleading messages regarding the environmental friendliness, emissions, fuel efficiency and performance of the Class Vehicles in television, print, and Internet advertising.

179. These representations and/or omissions have deceived and are likely to deceive Plaintiffs Bourn, Watson, and Verner, the California Subclass, and consumers across the country in connection with their decision to purchase Class Vehicles. Volkswagen's representations and/or omissions were material and constituted a substantial and material factor in Plaintiffs Bourn and Watson's decision to purchase their Class Vehicle. Had Plaintiffs Bourn, Watson, and Verner known the actual facts, they would not have purchased the Class Vehicles and/or paid more than they would have had Volkswagen accurately disclosed the Class Vehicles' true characteristics.

180. Volkswagen directly and indirectly, has engaged in substantially similar conduct with respect to each Plaintiff and to each member of the California Subclass.

181. Plaintiffs Bourn, Watson, and Verner suffered injury in fact and lost money and/or property as a result of Volkswagen's false and misleading advertising and California Subclass members suffered harm when each was required to pay a purchase price in excess of what a

VW FOIA, EPA 06/20/2017 2017-FFP_031121

California Subclass member would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics and in the form of decreased resale value of the Class Vehicles.

182. As a result of Volkswagen's violations, Plaintiffs Bourn, Watson, and Verner and California Subclass members are entitled to equitable relief in the form of full restitution of all monies paid for the sales price of the Vehicles, diminished value of the Class Vehicles, and/or disgorgement of the profits derived from Volkswagen's false and misleading advertising.

183. Plaintiffs Bourn, Watson, and Verner also seek an order enjoining Volkswagen from such future conduct.

EIGHTH CLAIM

Violation of the Virginia Consumer Protection Act (Va. Code Ann. §§59.1-196, *et seq.*)

184. Plaintiff Schumacher incorporates by reference each preceding and succeeding paragraph.

185. Plaintiff Schumacher brings this Claim on behalf of the Virginia Subclass, which is cognizable in this Court pursuant to *Shady Grove Orthopedic Assocs., P.A. v. Allstate Ins. Co.*, 559 U.S. 393 (2010).

186. Defendants are "persons" within the meaning of Va. Code Ann. §59.1-200(A).

187. Volkswagen violated the Virginia Consumer Protection Act, which prohibits "...(5) misrepresenting that goods or services have certain quantities, characteristics, ingredients, uses, or benefits; (6) misrepresenting that goods or services are of a particular standard, quality, grade, style, or model; ... (8) advertising goods or services with intent not to sell them as advertised ...; [and] (14) using any other deception, fraud, false pretense, false promise, or misrepresentation in connection with a consumer transaction[.]" Va. Code Ann. §59.1-200(A).

188. These representations and/or omissions have deceived and are likely to deceive Plaintiff Schumacher, the Virginia Subclass, and consumers across the country in connection with their decision to purchase Class Vehicles. Volkswagen's representations and/or omissions were material and constituted a substantial and material factor in Plaintiff Schumacher's decision to

VW FOIA, EPA 06/20/2017 2017-FFP_031122

purchase their Class Vehicle. Had Plaintiff Schumacher and Virginia Subclass members known the actual facts, they would not have purchased the Class Vehicles and/or would have paid less for them.

189. Volkswagen, directly and indirectly, has engaged in substantially similar conduct with respect to each Plaintiff and to each member of the Virginia Subclass.

190. Plaintiff Schumacher and Virginia Subclass members suffered injury in fact and lost money and/or property as a result of Volkswagen's Violations of the Virginia Consumer Protection Act. Plaintiff Schumacher and Virginia Subclass members suffered harm when each was required to pay a purchase price in excess of what they would have paid if Volkswagen had accurately disclosed the Class Vehicles' characteristics; they also suffered harm in the form of decreased resale value of the Class Vehicles.

191. As a result of Volkswagen's violations, Plaintiff Schumacher and Virginia Subclass members are entitled to three times the amount of actual damages or $1000, whichever is greater, as well as costs and attorneys' fees. Va. Code Ann. §§59.1-204(a), (b).

NINTH CLAIM
Unjust Enrichment

192. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

193. Plaintiffs bring this claim for unjust enrichment on behalf of the nationwide Class under the common law of unjust enrichment, as there are no true conflicts (case-dispositive differences) among various states' laws of unjust enrichment.

194. In the alternative, Plaintiffs bring this claim on behalf of the nationwide Class under Virginia law, because the Defendants' United States operations are headquartered in Virginia and Virginia has the most significant relationship to the issues and facts relevant to this claim.

195. Volkswagen received and retained a benefit from the Plaintiffs and inequity has resulted.

196. Volkswagen benefitted through its unjust conduct, by selling Class Vehicles subject

VW FOIA, EPA 06/20/2017 2017-FFP_031123

to the misrepresentation that they were EPA- and/or CARB-compliant and by failing to disclose its use of a defeat device in these vehicles.

197. Plaintiffs, were charged a premium based on this misrepresentation, overpaid for these vehicles as a result, and/or would not have purchased these vehicles at all had their noncompliance with federal and state emissions laws been disclosed.

198. It is inequitable for Volkswagen to retain these benefits.

199. Plaintiffs do not have an adequate remedy at law.

200. As a result of Volkswagen's conduct, the amount of its unjust enrichment should be disgorged, in an amount to be proven at trial.

TENTH CLAIM
Unjust Enrichment

201. Plaintiffs incorporate by reference each preceding and succeeding paragraph.

202. Plaintiffs bring this claim for unjust enrichment on behalf of the nationwide Class under the common law of fraudulent concealment, as there are no true conflicts (case-dispositive differences) among various states' laws of fraudulent concealment.

203. In the alternative, Plaintiffs bring this claim on behalf of the nationwide Class under Virginia law, because the Defendants' United States operations are headquartered in Virginia and Virginia has the most significant relationship to the issues and facts relevant to this claim.

204. Volkswagen concealed and suppressed the material facts that the Class Vehicles did not comply with federal and state emissions laws and were spewing illegal amounts of NOx when they were represented to be EPA- and/or CARB-compliant. It also concealed and suppressed the material fact that the Class Vehicles were equipped with a defeat device that prevented their proper testing under laboratory conditions for compliance with federal and state emissions laws and regulations.

205. Volkswagen took the various steps described herein to effectuate that concealment, such as false advertising and in false statements of compliance with federal and state emissions

VW FOIA, EPA 06/20/2017 2017-FFP_031124

laws and regulations affixed to each of the Class Vehicles

206. Volkswagen took steps to ensure that its employees did not reveal these concealed facts to federal and state environmental regulators.

207. Volkswagen had a duty to disclose the concealed information because it:

- Had exclusive and/or far superior knowledge and access to the facts than Plaintiffs and Class Members, and it knew the facts were not known to or reasonably discoverable by Plaintiffs and the Class;
- Intentionally concealed the foregoing from Plaintiffs; and
- Made incomplete representations about the compliance of the Class Vehicles with federal and state emissions laws and regulations, while purposefully withholding material facts from Plaintiffs that contradicted these representations.

208. These omitted and concealed facts were material because they would be relied on by a reasonable person purchasing, leasing or retaining the Class Vehicles, and because they directly impact the price paid for the Class Vehicles and their resale value. Whether the Class Vehicles comply with federal and state emissions laws and regulations is a material concern to a consumer. Plaintiffs and Class Members trusted Volkswagen not to sell or lease them vehicles that were non-compliant.

209. Volkswagen concealed and suppressed these material facts to falsely assure purchasers and consumers that the Class Vehicles complied with federal and state emissions laws and regulations, as represented by Volkswagen and reasonably expected by consumers.

210. Volkswagen actively concealed and/or suppressed these material facts, in whole or in part, to protect its profits and to avoid recalls that would hurt the brand image of the Class Vehicles and cost Volkswagen money. Volkswagen concealed these facts at the expense of Plaintiffs and the Class.

211. Plaintiffs and the Class were unaware of these omitted material facts, and would not have acted as they did if they had known of the concealed and/or suppressed information.

VW FOIA, EPA 06/20/2017 2017-FFP_031125

212. Had they been aware of the non-compliance of the Class Vehicles with federal and state emissions laws and regulations and Volkswagen's callous disregard for those laws and regulations, Plaintiffs and the Class either would have paid less for their Class Vehicles or would not have purchased or leased them at all. Plaintiffs did not receive the benefit of their bargain as a result of Volkswagen's fraudulent concealment.

213. Because of the concealment and/or suppression of the facts, Plaintiffs and the Class sustained damage because they own vehicles that diminished in value as a result of Volkswagen's concealment of, and failure to timely disclose, the non-compliance of the Class Vehicles with federal and state emissions laws and regulations.

214. The value of all Class members' Class Vehicles has diminished as a result of Volkswagen's fraudulent concealment of the non-compliance of the Class Vehicles with federal and state emissions laws and regulations and has made any reasonable consumer reluctant to purchase any of the Class Vehicles, let alone pay what otherwise would have been fair market value for the vehicles.

215. Accordingly, Volkswagen is liable to the Class for their damages in an amount to be proven at trial.

216. Volkswagen's acts were done maliciously, oppressively, deliberately, with intent to defraud, and in reckless disregard of Plaintiffs' and the Class's rights and well-being, and with the aim of enriching Volkswagen. Volkswagen's conduct, which exhibits the highest degree of reprehensibility, being intentional, continuous, placing others at risk of death and injury, and affecting public safety, warrants an assessment of punitive damages in an amount sufficient to deter such conduct in the future, which amount is to be determined according to proof.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs pray that the Court enter judgment on their behalf and on behalf of the Class and the California and Virginia Subclasses, and:

A. Order the appointment of an independent External Compliance Monitor to monitor

VW FOIA, EPA 06/20/2017 2017-FFP_031126

Volkswagen's compliance with federal and state environmental laws;

B. Order Volkswagen to pay a portion of its annual net profits into an independent fund administered by third parties approved by the Court who can disburse the funds to non-profit organizations that seek to monitor, educate people about, and/or remediate the deleterious environmental effects of vehicular diesel fuel emissions;

C. Order that this action may proceed as a class action, with Plaintiffs as the designated Class representatives for the Class; Plaintiffs Bourn, Watson, and Verner as designated Class representatives for the California Subclass; Plaintiff Schumacher as designated Class representative for the Virginia Subclass, and Plaintiffs' counsel as Class and Subclass Counsel;

D. Adjudge and decree that Volkswagen has violated the CAA, California Pollution Control laws, the Sherman Act, RICO, the Magnuson-Moss Act, the CLRA, California's Unfair Competition Law, California's False Advertising Law; the Virginia Consumer Protection Act, and the common law of unjust enrichment and fraudulent concealment and that Plaintiffs and the members of the Class and the California and Virginia Subclasses have been injured in their business and property as a result of Volkswagen's violations;

E. Order that Plaintiffs and the members of the National Class and California Subclass recover damages sustained by them, to the extent provided by law, and that a judgment in favor of Plaintiffs and the Class and the California and Virginia Subclasses be entered against Volkswagen in an amount to be trebled in accordance with such laws;

F. To the extent provided by law, enjoin and restrain Volkswagen, its subsidiaries, affiliates, successors, transferees, assignees and the respective officers, directors, partners, agents, and employees thereof and all other persons acting or claiming to act on their behalf from continuing to violate the CAA, California Pollution Control laws, the Sherman Act, RICO, the Magnuson-Moss Act, CLRA, California's Unfair Competition Law, California's False Advertising Law, the Virginia Consumer Protection Act, and the common law of unjust enrichment and fraudulent concealment;

VW FOIA, EPA 06/20/2017 2017-FFP_031127

G. Order Volkswagen to pay restitution or damages to Plaintiffs and members of the Class and the California and Virginia Subclasses and to disgorge the profits unlawfully acquired and retained by Volkswagen;

H. Award Plaintiffs and members of the Class and the California and Virginia Subclasses pre-judgment and post-judgment interest, and order that such interest be awarded at the highest legal rate from and after the date of service of the initial complaint in this action;

I. Award Plaintiffs and members of the Class and the California and Virginia Subclasses their costs of this suit, including reasonable attorneys' fees as provided by law; and

J. Order such other or further relief as may be just and proper.

IX. JURY TRIAL DEMAND.

Pursuant to Federal Rule of Civil Procedure 38(b), Plaintiffs demand a trial by jury of all of the claims asserted in this Complaint so triable.

DATED: October 6, 2015

Subject: call monday

Would sometime in the 12-1:30 timeframe work for us to talk on monday? Another alternative is early (ie 8 AM). If you'll be up and about by then anyway and that works better, it's fine for me. But I don't want you to forgo a leisurely morning on a holiday...

Several items on my list--

--RFS matters (upcoming WH, USDA discussions, my latest conversation with Gina)

--VW: is someone following up to set up another meeting with Rosekind et al on recalls and VW? And Cynthia raised an issue with me friday night I need to talk to you about.

--your SES ratings for your ODs. As I said in my prior note, I concurred with your recommendations, but you had indicated a desire to talk about them, and I'd like that too.

Others?

Subject: Morning Consult Energy: Week in Review & What's Ahead

By Deirdra O'Regan

Week in Review

Lifting the oil export ban

The House passed a bill that would lift the 40-year-old ban on U.S. crude oil exports. The 261-159 vote was widely welcomed by Republicans, who have increased their push for repealing the 1975 law. However, the White House threatened to veto any legislation that would repeal the ban. The House vote occurred during a week that saw surging oil prices, with front-month West Texas Intermediate futures breaking above $50 per barrel on Thursday for the first time since July.

Toxic Substance Control Act

Senate efforts to update the Toxic Substance Control Act, which is widely viewed as weak and outdated, hit some roadblocks. The pending measure, which has 60 cosponsors, is considered a landmark piece of legislation that would bolster the Environmental Protection Agency's ability to review and regulate toxic chemicals. The bill was set to pass by voice vote until Sen. Richard Burr (R-N.C) and Sen. Kelly Ayotte (R-N.H.) said they would not let the bill move forward without an amendment to reauthorize the Land and Water Conservation Fund.

VW scandal

Volkswagen's top U.S. executive faced a grilling from the House Energy and Commerce Committee, where he apologized for the installation of so-called "defeat devices" to cheat emissions tests. Michael Horn denied it was a "corporate decision" and blamed the actions of a few rogue employees. He also told committee members it is likely to take at least two years to rectify the damage and repair the almost 500,00 vehicles affected in the United States.

Elsewhere, the House passed a bill that would expedite the review of energy projects on Native American lands. In the Senate, a procedural vote failed to advance the fiscal year 2016 energy and water appropriations bill.

What's Ahead

Both the House and Senate are in recess this week.

Efforts to repeal the crude oil export ban are likely to continue to dominate the energy agenda in Congress. Senate Republicans have expressed interest in coming up with incentives to win more Democratic support now that the House has already passed its bill, H.R. 702.

When the Senate passes its TSCA bill, a version of the legislation is expected to make its way quickly to President Obama's desk since the House overwhelmingly passed a related measure in April.

The fallout and recriminations from Volkswagen's emissions-cheating scandal will continue to play out publicly. The Senate Finance Committee is opening an investigation into Volkswagen's clean-car tax breaks, and the company is already under investigation by the Environmental Protection Agency and the Justice Department.

Mark Your Calendars (All Times Eastern)

Monday
Federal holiday – no events scheduled.

Tuesday
Association for Demand Response and Smart Grid conference @ 8:00 a.m.
Wilson Center discussion on climate change opinions in the U.S. and Canada @ 9 a.m.
Environmental and Energy Study Institute briefing on the PREPARE Act @ 10:30 a.m.

Wednesday
Association for Demand Response and Smart Grid conference @ 8:00 a.m.
AWEA Wind Energy Finance & Investment seminar @ 12 p.m.
Environmental Law Institute seminar and webinar on the Clean Power Plan @ 12:30 p.m.

Energy Department report highlights regional energy sector climate risks

By Kevin Rogers

A new Energy Department report concludes that climate change -- and the worsening droughts, intense storms and rising temperatures that come with it -- poses a threat to energy production and infrastructure across the U.S., and calls for proactive action to identify risks and boost resilience.

The report released Friday by the department assessed climate risks to the energy sector

across nine regions and examined power generation, electricity transmission, biofuel manufacturing and oil and gas development.

It expands on a 2013 report from the agency, with updates to reflect the findings of the department's Quadrennial Energy Review, which outlined policy proposals to improve energy sector reliability.

"To address the harsh impacts of climate change and extreme weather, we need innovative solutions that will make our energy sector more resilient, more flexible, and more efficient, as we build a cleaner, more climate-friendly energy system," Energy Secretary Ernest Moniz said in a statement.

Specifically, the report concluded that oil and gas operations in the Southeast, Southern Great Plains and Alaska were the most at risk for climate impacts from stronger storm systems and sea level rise.

Nationwide, flooding, storm surges and rising temperatures could threaten the transport of a number of fuels, including oil, natural gas, coal and bioenergy. The report surmised that flooding could damage pipelines, while heat waves could damage rail lines.

"Some energy infrastructure assets have already suffered damage or disruption in services from a variety of climate-related impacts, such as higher temperatures, rising sea levels, and more severe weather events," the report said.

In regard to electric generation and supply, the report concluded that western states reliant on hydropower are increasingly vulnerable to shifts in snowpack and melting patterns due to increased temperature. Thermoelectric power may also prove vulnerable to rising temperatures and reduced water availability nationwide, the report said.

The grid is also vulnerable to a number of climate-related impacts nationwide, including wildfires, flooding and storms that could damage or disrupt electric transmission. Across the nation, the report projected that electric capacity could be stretched as warmer temperatures would drive a surge in electricity demand.

Drought and wildfire could also hurt the bioenergy and biofuels sector in the Midwest and Plains regions, as rising temperatures would decrease crop yields for ethanol and advanced and cellulosic fuels.

The department did acknowledge some potential benefits to the energy sector, including new opportunities for Arctic drilling, longer growing seasons, expanded shipping opportunities and reductions in energy use for winter heating.

The report touted the administration's efforts to slash greenhouse gas emissions, as well as the Energy Department's efforts designed to improve energy infrastructure reliability, but concluded that much of the work would lie with local governments and the private sector to make the necessary upgrades.

Specifically, the report called for stronger investment in low-carbon power generation, improving operation efficiency and reliability, siting new infrastructure in less vulnerable areas and improving technology to make infrastructure more resilient.

"Efforts to improve climate resilience are underway in every region, but the severe challenges posed by climate change could overwhelm current resilience efforts unless more comprehensive and accelerated approaches are adopted," the report said. "Smart decisions today will help to provide a robust and resilient energy system for tomorrow."

US gasoline prices dip half a cent over past 2 weeks: Survey

By The Associated Press

CAMARILLO, Calif. (AP) — The average price of gasoline has dropped half a cent over the past two weeks, to $2.34 a gallon.

Industry analyst Trilby Lundberg reported Sunday that prices have fallen 52 cents in the past 17 weeks, but the latest cut is the smallest so far.

She said a moderate hike in the cost of crude oil has nudged up wholesale prices, so retailers have stopped cutting their street prices.

Lundberg said consumers could start to see higher gas prices if crude prices continue to jump.

More

Qatar energy minister says oil prices have bottomed out

By The Associated Press

DOHA, Qatar (AP) — Qatar's energy minister says he believes that oil prices have bottomed

out ahead of an expected meeting of OPEC members and other oil producers later this month.

Energy and Industry Minister Mohammed bin Saleh al-Sada said in a statement Sunday that rising global demand and a lack of new supplies coming to market would help put a floor under prices.

Al-Sada also says that low prices have prompted oil companies to cut their spending on capital investments by nearly 20 percent this year, and that the cuts could lead to production shortfalls down the road.

Oil prices have plunged by more than half since the summer of 2014, with U.S. benchmark oil prices sending Friday at $49.63 a barrel.

Series of small earthquakes recorded in northern Oklahoma

By The Associated Press

CUSHING, Okla. (AP) — A series of small earthquakes have been recorded across northern Oklahoma following two moderate earthquakes in the area on Saturday.

The U.S. Geological Survey reported that nine quakes ranging in magnitude from 2.5 to 3.7 were recorded between 5:07 p.m. Saturday and 5:27 a.m. Sunday. No injuries or damage were reported. Geologists say damage is not likely in quakes below magnitude 4.0.

The latest seismic activity comes after a 4.5 magnitude temblor Saturday afternoon near Cushing and a 4.4 magnitude quake Saturday morning southwest of Medford.

Cushing is where the world's most important crude oil storage hub is located and it is used to settle futures contracts traded on the New York Mercantile Exchange. Cushing Emergency Management Director Bob Noltensmeyer said Sunday that no significant damage was found, only "shattered nerves."

Prosecutors play back ex-coal CEO's phone calls at trial

By Jonathan Matisse

CHARLESTON, W.Va. (AP) — Former Massey Energy CEO Don Blankenship lamented a push by his board to cap his salary at $12 million, called the group "so unappreciative," and said at least a quarter of his wealth was tied up in his company's stock, according to phone calls he secretly recorded in his office.

On Friday in Charleston federal court, prosecutors played back four calls and a memo from 2009 — the first round of several they'll present to a jury in Blankenship's criminal trial.

Blankenship faces charges of conspiring to break mine safety laws and lying to financial regulators about safety practices at Upper Big Branch Mine, in southern West Virginia. A 2010 explosion killed 29 miners there in the worst mine disaster in four decades.

Prosecutors have hand-picked recordings to make a case that the wealthy coal baron prioritized profits over safety at his mines, had huge windfalls when Massey did well, and lost millions after the mine explosion. They are also looking to paint Blankenship as a micromanager who was closely involved with Upper Big Branch's day-to-day operations.

VW diesel cars recalled in China, sales halted in Singapore

By Joe McDonald

BEIJING (AP) — Singapore has suspended sales of Volkswagen diesel vehicles, adding to the German automaker's woes in the wake of an emissions cheating scandal.

Earlier Monday, Volkswagen said it was recalling 1,950 diesel vehicles in China to correct engine software that the company admits cheated on emissions tests.

Data from the company's Singapore office said that cheating software was found on 650 Singapore-registered vehicles.

The recall in China applies to 1,946 Tiguan sport utility vehicles and four Passat B6 sedans, all of them imported, the company said Monday. It said technical solutions are being developed and have yet to be submitted to Chinese authorities for approval.

County says partial settlement reached in West,

Texas blast

By The Associated Press

WACO, Texas (AP) — A settlement was reached with families of some victims of a massive West, Texas fertilizer explosion that killed 15 people and leveled part of the town two years ago, according to a post on the website of McLennan County, where a trial over their claims was set to begin.

Jury selection for the trial had been scheduled to start Monday but a county website told potential jurors they were excused because "a settlement has been reached." No other details were provided.

The blast on April 17, 2013 also injured hundreds, flattened a whole section of town and left a crater 90 feet wide and ten feet deep. Most of the victims were first responders who arrived to fight a fire at the facility but some nearby residents also were killed.

District Court Judge Jim Meyer divided a host of lawsuits into three groups. The trial Monday was for the first group representing relatives of three men killed in the blast. They had sued local owners of the facility and companies that either manufactured or sold fertilizer to it.

Plan to shift power to natural gas clears Puerto Rico hurdle

By The Associated Press

SAN JUAN, Puerto Rico (AP) — Puerto Rico's power company says a project to cut the cost of electricity and reduce pollution has cleared a key hurdle.

The Puerto Rico Electric Power Authority says officials of the U.S. territory on Friday certified that the Aguirre Gasport project complies with environmental policies and regulations.

The $484 million project is critical to plans to convert oil-fired power generation to cheaper, cleaner natural gas.

The project still awaits approval from the U.S. Army Corps of Engineers, as well as resolution of financing. The financially troubled utility is seeking a federal government loan guarantee for the project and is talking with creditors.

Development banks boost funding to fight climate

change

By Frank Bajak

LIMA, Peru (AP) — The world's top development banks pledged Friday to boost their funding to lessen climate change's impact, aiming for the goal of $100 billion a year that rich countries have pledged to transfer to developing countries by 2020.

The pledges were made as finance ministers met in Lima less than two months ahead of a climate conference in Paris considered pivotal if the brakes are to be put on global warming.

"This is a positive outcome and I think we can say with some certainty that we will reach the $100 billion commitment" made at 2009 climate talks in Copenhagen, French Foreign Minister Laurent Fabius told reporters.

"It is the beginning of what you need, because if the international community doesn't roll up it sleeves and get to work this thing is just too big for us," said Rachel Kyte, the World Bank vice president for climate change.

Glencore puts copper mines in Australia, Chile on sale

By The Associated Press

BERLIN (AP) — Commodities group Glencore is putting two copper mines, in Australia and Chile, on sale.

The company said Monday it is initiating the sale process for the Cobar mine in Australia and the Lomas Bayas mine in Chile in response to "a number of unsolicited expressions of interest for these mines from various potential buyers."

It invited bids for one or both mines and the process "may or may not result in a sale."

On Friday, Glencore said it is slashing its zinc production by a third in response to a sharp fall in the price of that metal. The company's shares have been under pressure as investors worry about the impact of falling commodity prices on earnings and its ability to meet its debt repayments.

Shell: Militants attack Nigerian flow station, kill guard

By The Associated Press

WARRI, Nigeria (AP) — Shell Nigeria says armed militants attacked an oil flow station in the southern Delta and killed a guard, amid fears of a renewed crisis as the country grapples with halved petroleum prices.

Militant demands have been increasing and range from regional autonomy to a bigger share of the oil wealth that has polluted the Niger Delta region and destroyed the livelihoods of hundreds of thousands of farmers and fishermen.

President Muhammad Buhari has said he will terminate in December a $500 million-a-year amnesty program negotiated in 2009 for 30,000 militants that curbed an insurgency that was killing 1,000 people a year and halved the oil production of Africa's biggest producer.

Shell Nigeria spokesman Joseph Obari said Sunday that an investigation has been launched into Friday's attack at Kolo Creek.

Former Chinese state oil boss convicted of corruption

By The Associated Press

BEIJING (AP) — Two senior Chinese officials — one who earlier led the country's biggest petroleum company and the other a deputy party chief in populous Sichuan province— were convicted of corruption Monday and sentenced to 16 and 13 years in prison, respectively, Chinese authorities said.

Hanjiang Intermediate People's Court in central China said Jiang Jiemin, former chairman of the state-run China National Petroleum Corp., accepted 14 million yuan ($2.3 million) in bribes and failed to explain the source of another 15 million yuan. Jiang also violated regulations by providing assistance to others, resulting in losses to the state, the court said. It sentenced him to 16 years in prison.

Also on Monday, Xianning Intermediate People's Court, also in central China, said it convicted Li Chuncheng, a former deputy party chief for the southwestern province of Sichuan, of corruption and sentenced him to 13 years in jail. The court said Li received nearly 40 million yuan ($6.45 million) in bribes.

Both Jiang and Li are considered associates of Zhou Yongkang, a former member of the all-powerful standing committee of the ruling Communist Party's Politburo. Zhou has been convicted of corruption and is serving a life sentence in jail.

Russia resumes gas supply to Ukraine

MOSCOW (AP) — Russia's gas monopoly Gazprom says it has resumed supplies to Ukraine that will help the country meet its energy needs through the harsh winter months.

Gazprom CEO Alexei Miller said supplies, which were suspended in the spring, recommenced earlier Monday after the company received $234 million in prepayments from Kiev.

The deal, which was signed last month with the help of the European Union, will ensure that Ukraine will receive Russian gas for six months through March 2016.

Past gas disputes between Russia and Ukraine have led to cut-offs of supply. One standoff in 2009 caused serious disruptions in shipments EU countries in the dead of winter.

Energy Department report highlights regional energy sector climate risks

By Kevin Rogers

A new Energy Department report concludes that climate change -- and the worsening droughts, intense storms and rising temperatures that come with it -- poses a threat to energy production and infrastructure across the U.S., and calls for proactive action to identify risks and boost resilience.

The report released Friday by the department assessed climate risks to the energy sector

across nine regions and examined power generation, electricity transmission, biofuel manufacturing and oil and gas development.

It expands on a 2013 report from the agency, with updates to reflect the findings of the department's Quadrennial Energy Review, which outlined policy proposals to improve energy sector reliability.

"To address the harsh impacts of climate change and extreme weather, we need innovative solutions that will make our energy sector more resilient, more flexible, and more efficient, as we build a cleaner, more climate-friendly energy system," Energy Secretary Ernest Moniz said in a statement.

Specifically, the report concluded that oil and gas operations in the Southeast, Southern Great Plains and Alaska were the most at risk for climate impacts from stronger storm systems and sea level rise.

Nationwide, flooding, storm surges and rising temperatures could threaten the transport of a number of fuels, including oil, natural gas, coal and bioenergy. The report surmised that flooding could damage pipelines, while heat waves could damage rail lines.

"Some energy infrastructure assets have already suffered damage or disruption in services from a variety of climate-related impacts, such as higher temperatures, rising sea levels, and more severe weather events," the report said.

In regard to electric generation and supply, the report concluded that western states reliant on hydropower are increasingly vulnerable to shifts in snowpack and melting patterns due to increased temperature. Thermoelectric power may also prove vulnerable to rising temperatures and reduced water availability nationwide, the report said.

The grid is also vulnerable to a number of climate-related impacts nationwide, including wildfires, flooding and storms that could damage or disrupt electric transmission. Across the nation, the report projected that electric capacity could be stretched as warmer temperatures would drive a surge in electricity demand.

Drought and wildfire could also hurt the bioenergy and biofuels sector in the Midwest and Plains regions, as rising temperatures would decrease crop yields for ethanol and advanced and cellulosic fuels.

The department did acknowledge some potential benefits to the energy sector, including new opportunities for Arctic drilling, longer growing seasons, expanded shipping opportunities and reductions in energy use for winter heating.

The report touted the administration's efforts to slash greenhouse gas emissions, as well as the Energy Department's efforts designed to improve energy infrastructure reliability, but concluded that much of the work would lie with local governments and the private sector to make the necessary upgrades.

Specifically, the report called for stronger investment in low-carbon power generation, improving operation efficiency and reliability, siting new infrastructure in less vulnerable areas and improving technology to make infrastructure more resilient.

"Efforts to improve climate resilience are underway in every region, but the severe challenges posed by climate change could overwhelm current resilience efforts unless more comprehensive and accelerated approaches are adopted," the report said. "Smart decisions today will help to provide a robust and resilient energy system for tomorrow."

US gasoline prices dip half a cent over past 2 weeks: Survey

By The Associated Press

CAMARILLO, Calif. (AP) — The average price of gasoline has dropped half a cent over the past two weeks, to $2.34 a gallon.

Industry analyst Trilby Lundberg reported Sunday that prices have fallen 52 cents in the past 17 weeks, but the latest cut is the smallest so far.

She said a moderate hike in the cost of crude oil has nudged up wholesale prices, so retailers have stopped cutting their street prices.

Lundberg said consumers could start to see higher gas prices if crude prices continue to jump.

More

Qatar energy minister says oil prices have bottomed out

By The Associated Press

DOHA, Qatar (AP) — Qatar's energy minister says he believes that oil prices have bottomed

out ahead of an expected meeting of OPEC members and other oil producers later this month.

Energy and Industry Minister Mohammed bin Saleh al-Sada said in a statement Sunday that rising global demand and a lack of new supplies coming to market would help put a floor under prices.

Al-Sada also says that low prices have prompted oil companies to cut their spending on capital investments by nearly 20 percent this year, and that the cuts could lead to production shortfalls down the road.

Oil prices have plunged by more than half since the summer of 2014, with U.S. benchmark oil prices sending Friday at $49.63 a barrel.

Series of small earthquakes recorded in northern Oklahoma

By The Associated Press

CUSHING, Okla. (AP) — A series of small earthquakes have been recorded across northern Oklahoma following two moderate earthquakes in the area on Saturday.

The U.S. Geological Survey reported that nine quakes ranging in magnitude from 2.5 to 3.7 were recorded between 5:07 p.m. Saturday and 5:27 a.m. Sunday. No injuries or damage were reported. Geologists say damage is not likely in quakes below magnitude 4.0.

The latest seismic activity comes after a 4.5 magnitude temblor Saturday afternoon near Cushing and a 4.4 magnitude quake Saturday morning southwest of Medford.

Cushing is where the world's most important crude oil storage hub is located and it is used to settle futures contracts traded on the New York Mercantile Exchange. Cushing Emergency Management Director Bob Noltensmeyer said Sunday that no significant damage was found, only "shattered nerves."

Prosecutors play back ex-coal CEO's phone calls at trial

By Jonathan Matisse

CHARLESTON, W.Va. (AP) — Former Massey Energy CEO Don Blankenship lamented a push by his board to cap his salary at $12 million, called the group "so unappreciative," and said at least a quarter of his wealth was tied up in his company's stock, according to phone calls he secretly recorded in his office.

On Friday in Charleston federal court, prosecutors played back four calls and a memo from 2009 — the first round of several they'll present to a jury in Blankenship's criminal trial.

Blankenship faces charges of conspiring to break mine safety laws and lying to financial regulators about safety practices at Upper Big Branch Mine, in southern West Virginia. A 2010 explosion killed 29 miners there in the worst mine disaster in four decades.

Prosecutors have hand-picked recordings to make a case that the wealthy coal baron prioritized profits over safety at his mines, had huge windfalls when Massey did well, and lost millions after the mine explosion. They are also looking to paint Blankenship as a micromanager who was closely involved with Upper Big Branch's day-to-day operations.

More

VW diesel cars recalled in China, sales halted in Singapore

By Joe McDonald

BEIJING (AP) — Singapore has suspended sales of Volkswagen diesel vehicles, adding to the German automaker's woes in the wake of an emissions cheating scandal.

Earlier Monday, Volkswagen said it was recalling 1,950 diesel vehicles in China to correct engine software that the company admits cheated on emissions tests.

Data from the company's Singapore office said that cheating software was found on 650 Singapore-registered vehicles.

The recall in China applies to 1,946 Tiguan sport utility vehicles and four Passat B6 sedans, all of them imported, the company said Monday. It said technical solutions are being developed and have yet to be submitted to Chinese authorities for approval.

County says partial settlement reached in West,

Texas blast

By The Associated Press

WACO, Texas (AP) — A settlement was reached with families of some victims of a massive West, Texas fertilizer explosion that killed 15 people and leveled part of the town two years ago, according to a post on the website of McLennan County, where a trial over their claims was set to begin.

Jury selection for the trial had been scheduled to start Monday but a county website told potential jurors they were excused because "a settlement has been reached." No other details were provided.

The blast on April 17, 2013 also injured hundreds, flattened a whole section of town and left a crater 90 feet wide and ten feet deep. Most of the victims were first responders who arrived to fight a fire at the facility but some nearby residents also were killed.

District Court Judge Jim Meyer divided a host of lawsuits into three groups. The trial Monday was for the first group representing relatives of three men killed in the blast. They had sued local owners of the facility and companies that either manufactured or sold fertilizer to it.

Plan to shift power to natural gas clears Puerto Rico hurdle

By The Associated Press

SAN JUAN, Puerto Rico (AP) — Puerto Rico's power company says a project to cut the cost of electricity and reduce pollution has cleared a key hurdle.

The Puerto Rico Electric Power Authority says officials of the U.S. territory on Friday certified that the Aguirre Gasport project complies with environmental policies and regulations.

The $484 million project is critical to plans to convert oil-fired power generation to cheaper, cleaner natural gas.

The project still awaits approval from the U.S. Army Corps of Engineers, as well as resolution of financing. The financially troubled utility is seeking a federal government loan guarantee for the project and is talking with creditors.

Development banks boost funding to fight climate

change

By Frank Bajak

LIMA, Peru (AP) — The world's top development banks pledged Friday to boost their funding to lessen climate change's impact, aiming for the goal of $100 billion a year that rich countries have pledged to transfer to developing countries by 2020.

The pledges were made as finance ministers met in Lima less than two months ahead of a climate conference in Paris considered pivotal if the brakes are to be put on global warming.

"This is a positive outcome and I think we can say with some certainty that we will reach the $100 billion commitment" made at 2009 climate talks in Copenhagen, French Foreign Minister Laurent Fabius told reporters.

"It is the beginning of what you need, because if the international community doesn't roll up it sleeves and get to work this thing is just too big for us," said Rachel Kyte, the World Bank vice president for climate change.

Glencore puts copper mines in Australia, Chile on sale

By The Associated Press

BERLIN (AP) — Commodities group Glencore is putting two copper mines, in Australia and Chile, on sale.

The company said Monday it is initiating the sale process for the Cobar mine in Australia and the Lomas Bayas mine in Chile in response to "a number of unsolicited expressions of interest for these mines from various potential buyers."

It invited bids for one or both mines and the process "may or may not result in a sale."

On Friday, Glencore said it is slashing its zinc production by a third in response to a sharp fall in the price of that metal. The company's shares have been under pressure as investors worry about the impact of falling commodity prices on earnings and its ability to meet its debt repayments.

Shell: Militants attack Nigerian flow station, kill guard

By The Associated Press

WARRI, Nigeria (AP) — Shell Nigeria says armed militants attacked an oil flow station in the southern Delta and killed a guard, amid fears of a renewed crisis as the country grapples with halved petroleum prices.

Militant demands have been increasing and range from regional autonomy to a bigger share of the oil wealth that has polluted the Niger Delta region and destroyed the livelihoods of hundreds of thousands of farmers and fishermen.

President Muhammad Buhari has said he will terminate in December a $500 million-a-year amnesty program negotiated in 2009 for 30,000 militants that curbed an insurgency that was killing 1,000 people a year and halved the oil production of Africa's biggest producer.

Shell Nigeria spokesman Joseph Obari said Sunday that an investigation has been launched into Friday's attack at Kolo Creek.

Former Chinese state oil boss convicted of corruption

By The Associated Press

BEIJING (AP) — Two senior Chinese officials — one who earlier led the country's biggest petroleum company and the other a deputy party chief in populous Sichuan province— were convicted of corruption Monday and sentenced to 16 and 13 years in prison, respectively, Chinese authorities said.

Hanjiang Intermediate People's Court in central China said Jiang Jiemin, former chairman of the state-run China National Petroleum Corp., accepted 14 million yuan ($2.3 million) in bribes and failed to explain the source of another 15 million yuan. Jiang also violated regulations by providing assistance to others, resulting in losses to the state, the court said. It sentenced him to 16 years in prison.

Also on Monday, Xianning Intermediate People's Court, also in central China, said it convicted Li Chuncheng, a former deputy party chief for the southwestern province of Sichuan, of corruption and sentenced him to 13 years in jail. The court said Li received nearly 40 million yuan ($6.45 million) in bribes.

Both Jiang and Li are considered associates of Zhou Yongkang, a former member of the all-powerful standing committee of the ruling Communist Party's Politburo. Zhou has been convicted of corruption and is serving a life sentence in jail.

California air quality regulators have given Volkswagen a Nov. 20 deadline to submit a proposed timeline and technical solution for fixing the diesel cars it fitted with software to cheat emissions standards, a state agency spokesman announced Friday.

Calif. Law Requires Public Pensions To Divest Coal Stakes

California Gov. Jerry Brown on Thursday signed into law a bill requiring the state's two massive public pension funds to sell off their stakes in thermal coal, the first law of its kind in the country.

LITIGATION

Maine Says EPA Illegally Giving Tribes Special Water Rights

Maine on Thursday amended its lawsuit aiming to compel the U.S. Environmental Protection Agency to recognize the state's authority over tribal waters, saying the federal agency made unlawful determinations about the state's jurisdiction after its original complaint last year.

US Judge OKs Ch. 11 Plan For Railway In Quebec Train Blast

A Maine bankruptcy judge on Friday confirmed the bankruptcy plan of Montreal Maine & Atlantic Railway Ltd., whose fortunes plummeted after a fiery 2013 oil train derailment that killed 47 people in the town of Lac-Megantic, Quebec.

Bosch Enabled Volkswagen Exhaust Fraud, Drivers Claim

U.S. drivers disgruntled over Volkswagen AG's diesel fraud are now bringing claims against Robert Bosch GmbH Inc., alleging that the German auto parts maker knowingly supplied the manufacturer with software that skirted clean air regulations and that the scheme violated the Racketeer Influenced and Corrupt Organizations Act.

Fish And Wildlife Appeals Eagle Permit Ruling To 9th Circ.

The U.S. Fish and Wildlife Service on Thursday filed an intent to appeal to the Ninth Circuit an August decision striking down its rule lengthening the duration of permits to "take" bald and golden eagles from five years to 30 years.

NJ Judge Again Blocks Intervenors In $225M ExxonMobil Deal

A New Jersey judge who approved a controversial $225 million payout from ExxonMobil Corp. to settle contamination claims denied the second attempt Friday by the deal's detractors to join the litigation in order to stop a deal they say undervalues natural resource damages.

The Texas Supreme Court said Friday it will not take up the Sierra Club's case challenging rulings that it was not entitled to a trial-like hearing before the Texas Commission on Environmental Quality over its grant of a radioactive waste disposal permit.

Blackfeet Members Demand Water Rights From DOI

Members of the Blackfeet Nation hit the U.S. Department of the Interior with a complaint Friday in Montana federal court seeking legal title to the natural resources on the tribe's reservation in the state and alleging that the federal government allowed illegal use of the tribe's water.

DOT Seeks More Time In Suit Over $1.2B Ill.-Ind. Toll Road

The U.S. Department of Transportation urged an Illinois federal court Friday to impose a nine-month stay of litigation in a case challenging a proposed $1.2 billion toll road linking two interstates between Illinois and Indiana to give the agency adequate time and money to address the issues.

PEOPLE

Hogan Lovells Scores NHTSA Atty For Enviro Group

Hogan Lovells has bolstered the firm's environmental practice group with a hire from the National Highway Traffic Safety Administration, bringing on board an attorney with expertise tackling motor vehicle safety and regulatory compliance matters.

EXPERT ANALYSIS

NJ Appeals Court Makes Room For The State In Spill Act

A New Jersey appellate court's recent decision in NL Industries Inc. v. State of New Jersey is an outright victory for responsible parties saddled with the costs to clean up contaminated sites in which the state bears some level of responsibility under the New Jersey Spill Compensation and Control Act, says John DiChello Jr. of Blank Rome LLP.

10 Ways To Become A 360-Degree Lawyer

Whether you're a millennial joining the profession or a seasoned veteran, the challenges posed by the current legal market compel everyone to adapt and innovate. Law professors Rosario Schrier and Annette Torres team up to offer 10 tips to develop a more diverse skill set.

LEGAL INDUSTRY

Most Feared Plaintiffs Firm: Robins Kaplan

In March, Robins Kaplan LLP capped off a lengthy antitrust suit by finalizing $590.5 million in settlements with Goldman Sachs, Bain Capital and other private-equity juggernauts accused of conspiring to drive down the cost of takeovers, adding another chapter to the

What To Do When Your Co-Counsel Is The Problem

Defending the interests of a client against an adversary requires adept legal strategies that most attorneys are prepared for, but sometimes it's the co-counsel that becomes the problem. Here, Law360 looks at four ways attorneys can smooth out this potentially sticky situation.

5 Signs You're Destined To Go In-House

Some in-house counsel end up in the job; for others, an in-house legal career seems destined from the start. Here, experts dish on the character traits and strengths of lawyers who are perfectly suited to leave private practice behind — and how to tell if you're one of them.

Dewey Jury Still Stuck, Asks For Star Cooperator Testimony

Jurors in the trial of the former leaders of Dewey & LeBoeuf LLP met Friday for the 17th time to weigh the Manhattan district attorney's allegations of a scheme to defraud Dewey's lenders and investors before the firm collapsed, and asked to rehear testimony from the star cooperating witness.

Perkins Coie Gives First-Years In Wash. $20K Raise

While the rest of us spent the early days of October watching football and dreaming of our far-away holiday bonuses, first-year associates in Perkins Coie LLP's Seattle and Bellevue, Washington, offices were busy toasting a hefty $20,000 salary increase that the firm confirmed Friday.

Energy Title Attorneys Face Pink Slips As Work Dries Up

Many of the legions of lawyers who jumped deep into title work triggered by the natural gas boom of recent years failed to diversify their practices, experts said, and they face a hard landing in a job market getting hit by the energy slowdown.

In Case You Missed It: Hottest Firms And Stories On Law360

W.Va. Residents Can Pursue Chemical Spill Claims As Class

A West Virginia federal judge has certified a class of individuals and business owners accusing American Water Works and Eastman Chemical of complicity in a January 2014 chemical spill that left 300,000 without drinking water, but eliminated plaintiffs' ability to collect damages from the companies as a class.

Feds Told To Speed Review Of Drilling Plan For Tribal Site

A D.C. federal judge on Thursday ordered the federal government to decide by Nov. 23 whether it will seek to cancel or lift a suspension on Solenex LLC's natural gas permit on land sacred to Montana's Blackfeet Nation, slamming the government's proposed schedule to resolve the nearly 30-year suspension of the lease as unreasonable.

VW's 'Auxiliary' Emissions Software Under EPA Scrutiny

More Volkswagen emissions-related software, which a VW executive obliquely called a potential "auxiliary emissions control device" to federal lawmakers, has become part of the U.S. Environmental Protection Agency's ongoing investigation of VW diesel vehicles designed to cheat emissions tests, the agency confirmed Friday.

Fed. Circ. Backs BLM In Wyo. Oil And Gas Leases Dispute

The Federal Circuit on Friday sided with the Bureau of Land Management in a row over the suspension of oil and gas leases in a mineral-rich area of Wyoming, rejecting a geologic consulting firm's claim that the move marked a taking of its property interests in 26 leases.

EPA Water Rule Blocked Nationwide By 6th Circ.

The Sixth Circuit on Friday stayed a controversial federal rule clarifying the scope of the Clean Water Act while it sorts out whether the courts of appeal or district courts have jurisdiction to handle challenges filed by various states and private parties.

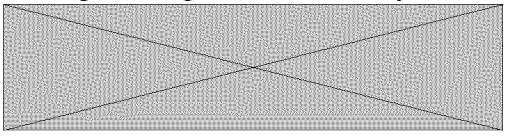
Law360 | Portfolio Media, Inc, 860 Broadway, New York, New York 10003

To: Kaul, Meetu[Kaul.Meetu@epa.gov]
From: The Washington Post
Sent: Tue 10/13/2015 11:54:47 AM
Subject: The Daily 202: 9 questions for the Democratic debate -- Will Bernie lose his temper? Will Hillary connect? Will O'Malley get a moment?

View The Daily 202 on the Web

Share on Twitter Share on Facebook

The stage for tonight's debate at the Wynn Las Vegas is ready. (Photo by Joe Raedle/Getty Images)



THE BIG IDEA:

Good morning from the West Coast. Here are nine things I'll be watching during tonight's Democratic debate, which begins at 8:30 p.m. Eastern on CNN and runs two hours:

Will there be fireworks? Without **Donald Trump**, tonight surely will be much less entertaining than the first two GOP debates. There are unlikely to be personal attacks during the first showdown between **Hillary Clinton** and **Bernie Sanders**. As Philip Rucker previews on the front page of today's Post, both candidates have signaled that they will wear VELVET GLOVES: "Each plans to focus on his or her own policy proposals and backgrounds, drawing comparisons with each other wherever appropriate but avoiding the kind of direct attacks that have been so prominent in the Republican race."

But how hard does CNN try to orchestrate a Hillary pile-on? Producers want good television and ratings. If the two leading candidates do not go after each other aggressively, watch for moderator **Anderson Cooper** to try goading the three underdog candidates who will also be on stage into taking shots at them. Former Maryland Gov. **Martin O'Malley**, former Virginia Sen. **Jim Webb** or ex-Rhode Island Gov. **Lincoln Chafee** could come out swinging at the Democratic frontrunner and putative nominee. But if they pass, then it will fall upon the questioners to push Hillary on her private e-mail server, as well as

her leftward lurch on the Trans-Pacific Partnership, the Keystone XL Pipeline and Wall Street reform.

Cooper insists he won't tee up fights. "I'm always uncomfortable with that notion of setting people up in order to kind of promote some sort of a face-off," Cooper said on CNN's "Reliable Sources."

I don't buy that. But it's also possible that CNN will use the other two questioners, **Dana Bash** and CNN en Español anchor **Juan Carlos Lopez**, to play the bad cop to Cooper's good cop. And CNN's **Don Lemon**, reading questions submitted through Facebook, could pinch hit.

Anderson Cooper is the lead moderator of tonight's debate. (Reuters/Jason Redmond)

How does Clinton handle Sanders without being too dismissive? Let's remember that Hillary is a very talented debater. She fared well in her two dozen showdowns with **Barack Obama.** Her relentless message discipline suits itself to this medium, and she has real gravitas coming from 25 years spent on the public stage. A lot of what people have heard about her recently was translated through the media filter; she comes across better in person than in defensive soundbytes.

Hillary seeks to look presidential and electable tonight, but she does not want to look stiff. While getting into an argument with her foes isn't advisable, staying above the fray might make her look entitled. The key for Clinton is to show some energy and fire while also highlighting her experience. It's a tricky balancing act, but pre-debate expectations are pretty low. So she should be able to pretty easily exceed them.

Bernie Sanders in Tucson Friday night (AP Photo/Rick Scuteri)

Will Bernie lose his temper? Sanders does not suffer fools and risks coming across as unlikable if he gets snarly. Back in Vermont, past rivals say it is relatively easy to get under the senator's skin. Bernie is not prepping through mock debates, and he's not used to mixing it up with critics.

Does Sanders, who is not even a registered Democrat, come across as outside the mainstream? On "Meet the Press" this weekend, Sanders said "no" when asked if he is a capitalist. "I'm a

democratic socialist," he reiterated.

Bernie is also on the wrong side of the Democratic base when it comes to both guns and immigration. He voted for background checks but has opposed an assault weapons ban, blaming his rural state's love of firearms. Bowing to organized labor, and concerned about pressure on wages, he's dubious of allowing more immigrants into the United States. Both are flashpoints that he could get pressed on from the left. If there are multiple follow-ups over his past votes on these issues, Sanders might get flustered.

Obama 2008 strategist David Axelrod notes in an op-ed that Sanders has not talked much about "flesh-and-blood human beings" and their stories. "One listens to Sanders' jeremiads and is reminded of the old adage about liberals who 'love humanity and hate people,'" Axelrod wrote for CNN.com. "The debate is an opportunity for Sanders to present a more empathetic side — less grumpy old man and more caring advocate. Sanders also almost certainly will field questions about his youthful writings as a left-wing polemicist, which seem a little crazy now, probably even to him."

Can Sanders make inroads with minority voters? A CNN/ORC poll published yesterday showed that he's only getting 4 percent among African-Americans in South Carolina. Clinton led with 59 percent of South Carolina's black voters, who make up more than half the Democratic primary electorate in the state with the first Southern primary. Clinton crushed him 49 to 18 percent and, in Nevada, 50 percent to 34 percent. Sanders does well with white voters, which is why he's led in Iowa and New Hampshire polls, but there are doubts he can thrive past the first two states on the nominating calendar.

Does O'Malley get a post-debate bounce? It's hard to foresee the Maryland governor becoming even less of a factor in the Democratic contest. A Washington Post-University of Maryland poll published yesterday showed that he's getting just 4 percent among Democratic primary voters in his home state! (Hillary leads in Maryland with 43 percent, followed by **Joe Biden** at 26 percent and Sanders at 20 percent.)

No one has pushed harder for more debates than O'Malley. If he does not have a breakout performance, his money struggles will become

more acute and it will be harder to woo early state activists. "If he gives a mediocre performance, he's done," a Democratic operative with ties to the Maryland governor told The Post's John Wagner.

Does Jim Webb show up? The ex-Virginia senator is the biggest wildcard because you never know what you're going to get. Since announcing his candidacy, he's done very little campaigning. But Webb, the former Army secretary and Vietnam veteran, has a very impressive resume that could allow him to go toe-to-toe with the ex-secretary of state on foreign policy. He could criticize Clinton on Syria, Iran and possibly her vote to go into Iraq, which he opposed. As for his strategy: "Eisenhower didn't yap about D-Day in advance," a Webb spokesman told Time.

Jim Webb in Iowa this summer (Photo by Melina Mara/The Washington Post)

Does tonight make Joe Biden more or less likely to run? The vice president has no public events on his calendar today, but you can bet he'll be watching the debate from his home at the Naval Observatory. To help gin up excitement, CNN not only announced that Biden pre-qualified for the debate. Even after his team said he wouldn't attend, CNN made a show of having a sixth podium at the ready in case he changes his mind.

If Clinton does really well, quelling the doubts of some of her anxious supporters, Biden is less likely to jump into the race. If the debate is a jumble, joining the fray will certainly seem more attractive.

WHILE YOU WERE SLEEPING:

Hillary Clinton made a surprise appearance at a union protest in front of the Trump Hotel in Las Vegas yesterday afternoon (Photo by Joe Raedle/Getty Images)

— Clinton's private server was very vulnerable to external hacking, according to fresh details reported by the Associated Press. "Clinton's server appeared to allow users to connect openly over the Internet to control it remotely, according to detailed records compiled in 2012. Experts said the Microsoft remote desktop service wasn't intended for such use without additional protective measures, and was the subject of U.S. government and industry warnings at the time over attacks from even low-skilled intruders. Records show that Clinton additionally operated two more devices on her home network in Chappaqua, New York, that also were directly accessible from the Internet. One contained similar remote-control software that also has suffered from security vulnerabilities, known as Virtual Network Computing, and the other appeared to be configured to run websites."

Ultra Orthodox ZAKA volunteers clean up the scene of a bus attack this morning in Jerusalem. (Photo by Kobi Gideon/GPO via Getty Images)

— Two people were killed and at least 16 were injured in a stabbing attack on a Jerusalem bus, as the latest round of violence between Israelis and Palestinians escalated. Witnesses said the perpetrator was a Palestinian who was killed by police when the bus driver escaped and notified them. Israeli police said two attackers were involved: one with a knife and the other with a gun. Since last month, seven Israelis and 27 Palestinians have been killed in the violence.

— Insurgents fired two shells at the Russian embassy in the Syrian capital as hundreds of pro-government supporters gathered outside the compound to thank Moscow for its intervention in Syria, an AP reporter who was at the event reports: "It was not immediately clear if there were casualties. Opposition fighters in the suburbs of the capital have targeted the embassy in the past but it was not clear if Tuesday's attack targeted the rally."

Army Sgt. Bowe Bergdahl, left, and defense lead counsel Eugene Fidell, center, look on as Maj. Gen. Kenneth Dahl is questioned during a hearing in Texas last month. Bergdahl, who left his post in Afghanistan and was held by the Taliban for five years, is charged with desertion and misbehavior before the enemy. (AP Photo/Brigitte Woosley)

— Bowe Bergdahl's lawyer is attacking John McCain for possibly interfering with military justice. "A day after the disclosure of an Army

lawyer's recommendation that Sgt. Bowe Bergdahl face neither jail time nor punitive discharge for walking off his Army outpost in Afghanistan in 2009, Senator John McCain, chairman of the committee that oversees promotions of senior military commanders, said that Sergeant Bergdahl was 'clearly a deserter' and that he would convene a hearing if the sergeant was not punished," the New York Times' Richard A. Oppel Jr. reports. "Mr. McCain's statement drew a sharp rebuke on Monday from Sergeant Bergdahl's lawyer, partly because the four-star Army general who will ultimately decide the fate of Sergeant Bergdahl is considered likely someday to face a hearing for his next job before Mr. McCain's committee. Sergeant Bergdahl's lawyer, Eugene R. Fidell, accused Mr. McCain of improperly seeking to influence the outcome of a major military prosecution."

GET SMART FAST:

1. **Iran** has reportedly convicted **Jason Rezaian**, The Post's Tehran correspondent, who was charged with espionage and has been in prison there for 14 months. But Iran didn't reveal his sentence, and Rezaian could face 10 to 20 years. The secrecy around the verdict suggests that the Islamic Republic may still be pressing for a prisoner swap of three Iranian-Americans in exchange for 19 Iranian prisoners being held in the U.S. for circumventing sanctions. Post Executive Editor Martin Baron called the verdict "an outrageous injustice" and "contemptible.")Read Baron's full statement here.)

WAPO HIGHLIGHTS:

— **"Hope fades on Obama's vow to bring troops home before presidency ends," by Greg Jaffe:** "In meeting after meeting this spring and summer, President Obama insisted that the last American troops in Afghanistan would return home by the end of his presidency, definitively ending the longest war in American history. … Then in August, Gen. Martin E. Dempsey, the outgoing chairman of the Joint Chiefs of Staff, came in with one more plan to maintain a counterterrorism force of as many as 5,000 troops in Afghanistan to prevent a reemergence of al-Qaeda and to battle Islamic State fighters seeking a foothold in the country. Dempsey's plan was a quick, back-of-the-envelope exercise, according to senior administration officials. This time, though, Obama didn't dismiss it. 'I think that's an argument that can be made to the American people,' Obama said, according to a senior administration official who took part in the meeting.
… Afghanistan has been the one constant that spans his two terms in office. As an inexperienced president, Obama decided to send more than 50,000 American troops into Afghanistan. … In early October, Obama summed up one of the biggest lessons he's taken from America's interventions in these fractured societies. 'What we've learned over the last 10, 12, 13 years is that unless we can get the parties on the ground to agree to live together in some fashion, then no amount of U.S. military engagement will solve the problem,' Obama said."

Cheryl Mills (Ron Sachs/AP Images)

— **"While at State, Clinton chief of staff held job negotiating with Abu Dhabi," by Rosalind S. Helderman:** "During her first four months

at State, Mills also held another high-profile job: She worked part time at New York University, negotiating with officials in Abu Dhabi to build a campus in that Persian Gulf city. At State, she was unpaid, officially designated as a temporary expert-consultant — a status that allowed her to continue to collect outside income while serving as chief of staff. She reported that NYU paid her $198,000 in 2009, when her university work overlapped with her time at the State Department, and that she collected an additional $330,000 in vacation and severance payments when she left the school's payroll in May 2009. The arrangement, which Mills discussed for the first time publicly in an interview with The Washington Post, is another example of how Clinton as secretary allowed close aides to conduct their public work even as they performed jobs benefiting private interests. Another key Clinton aide, Huma Abedin, spent her last six months as Clinton's deputy chief of staff in 2012 simultaneously employed by the Clinton Foundation, the family's global charity, and a consulting company with close Clinton connections. Similarly, Mills remained on the Clinton Foundation's unpaid board for a short time after joining State." Read Roz's Q&A with Mills.

Alexander Butterfield in D.C. this weekend (Photo by Nikki Kahn/The Washington Post)

— Bob Woodward's new book about Nelson Butterfield — who disclosed Nixon's secret White House taping system — goes on sale today. David E. Hoffman writes a story about one of the highlights in "The Last of the President's Men": "Nixon believed that years of aerial bombing in Southeast Asia to pressure North Vietnam achieved 'zilch' even as he publicly declared it was effective and ordered more bombing while running for reelection in 1972, according to a handwritten note from Nixon disclosed in (Bob's) book. … Nixon's private assessment was correct, Woodward writes: The bombing was not working, but Nixon defended and intensified it in order to advance his reelection prospects. The claim that the bombing was militarily effective 'was a lie, and here Nixon made clear that he knew it,' Woodward writes."

Manuel Roig-Franzia tells the story of how Butterfield and Nixon came to collaborate on the book: In 2011, Butterfield visited Woodward's home in South Annapolis, Md., and the two "hit it off." Woodward's wife, Elsa, realized the story would best be told in a book.

SOCIAL MEDIA SPEED READ:

— ZIGNAL VISUAL: Clinton is a more polarizing figure than the other Democratic candidates, particularly on social media, where strong criticism from conservative sites and tweeters makes up a large portion of the chatter about her candidacy. Sanders, meanwhile, is buoyed by liberal net-roots support. The chart below from our analytics partners at Zignal Labs tracks the sentiment of all Twitter mentions by state over the last week. The blue states are states where Sanders has a higher positive sentiment. Red states are ones where Clinton's sentiment is higher than her Democratic rival. The darker the color, the wider the gap between the two:

While Sanders rivals Clinton's traffic on Twitter, **the former Secretary of State continues to dominate traditional media, particularly broadcast television, where Sanders has had a hard time breaking through.** That suggests that tomorrow might be the first time that many Americans will actually see Sanders in action.

According to Facebook, the five most talked about issues in the U.S. from Sept. 10 through Oct 10 were: Religion, Guns, The Economy, Homeland Security and Terrorism and Racial Issues. Via Facebook, below is the volume of conversation on the social network about each candidate. The interactions figure includes not only the activity on the candidate's page, but all of the likes, posts, comments and shares about that candidate from throughout the Facebook ecosystem in the U.S.:

–Pictures of the day:

Debbie Wasserman Schultz (D-Fla.) snapped a photo of the debate arena in Las Vegas. The DNC chair has incensed liberal activists by allegedly uninviting her own vice chair, Tulsi Gabbard, after she called for more debates. Gabbard, a Hawaii congresswoman, said the message was conveyed to her chief of staff by the chief of staff for Wasserman Schultz, who is widely perceived as pro-Hillary. The DNC publicly denied it, but Sanders' campaign offered Gabbard a ticket.

GOOD READS FROM ELSEWHERE:

Paul Ryan is too liberal for some on the right. (Andrew Harrer/Bloomberg)

— New York Times, "Latest Unease on Right: Ryan is too far left," by Jennifer Steinhauer: "Far-right media figures, relatively small in

number but potent in their influence, have embarked on a furious Internet expedition to cover Representative Paul D. Ryan in political silt. … He is being criticized on issues ranging from a 2008 vote to bail out large banks to his longstanding interest in immigration reform to his work on a bipartisan budget measure. On Sunday night, the Drudge Report — a prime driver of conservative commentary — dedicated separate headlines to bashing Mr. Ryan on policy positions. … The influence of conservative websites has enraged members who were once considered right of center themselves, and who are desperately trying to keep Mr. Ryan from getting spooked. 'Anyone who attacks Paul Ryan as being insufficiently conservative is either woefully misinformed or maliciously destructive,' said Representative Tom Cole, Republican of Oklahoma. 'His critics are not true conservatives. They are radical populists who neither understand nor accept the institutions, procedures and traditions that are the basis of constitutional governance.'"

— **Politico, "A 'cancer' on the Clinton candidacy," by Glenn Thrush and Annie Karni:** "Indeed, from the minute news of Clinton's secret personal email server broke this past March, she had reacted by lashing out at her enemies—and repeatedly demanding of her inner circle, 'How do we get past this?' Neither the campaign nor the candidate have definitively answered that question, and the months of indecision, uncertainty and mounting legal threat have left Clinton, for the second time in her two presidential campaigns, a deeply vulnerable front-runner. From the start, the email controversy—and her campaign's handling of it—has been an exercise in exasperation, according to people involved in the effort. The wiry and wily John Podesta, Clinton's campaign chairman, thought right away that she needed to dump everything out in public as quickly as possible to avoid the deadly drip-drip-drip. 'We need to throw the facts to the dogs, and let 'em chew on it,' Podesta told the candidate. But Clinton's answer—and that of her lawyer David Kendall and her former State Department chief of staff Cheryl Mills—was a 'no' when Podesta and other advisers asked for some details. Foggy Bottom needed to review the emails, they were told, and besides, half of them, the ones deemed 'personal,' had already been deleted … 'Why does the other side always know more than we do?' an aide pointedly asked Kendall during one call early in the unfolding email drama. But little more was forthcoming, according to a longtime Clinton adviser who recounted the incident."

— Associated Press, "Panama condo owners to Donald Trump: You're Fired!" by Jeff Horowitz: "The directors of the Trump Ocean Club met July 28 on urgent business. They needed to fire Donald Trump. The building's residents and condo owners had invested in the namesake, a 70-story waterfront tower along Panama Bay, on the strength of Trump's reputation. But during the four years that Trump Panama Condominium Management LLC had managed the property, Central America's largest building, a team installed by the Trump family was accused of running up more than $2 million in unauthorized debts, paying its executives undisclosed bonuses and withholding basic financial information from owners. … The Trump Organization sent its response days later. 'Your letter is a complete sham,' wrote the Trumps' top lawyer, Alan Garten. He accused the board of ingratitude and criminal trespassing. After refusing to accept being fired, Garten declared that Trump's company was quitting – and demanded a $5 million termination fee."

— USA Today, "ISIL Death Toll at 20,000, but stalemate continues," by Tom Vanden Brook: "The U.S.-led bombing campaign has killed an estimated 20,000 Islamic State fighters, an increase from the 15,000 the Pentagon reported in July, according to a senior military officer. … But despite the higher number of casualties and the airstrikes' erosion of morale among ISIL fighters, the militant group continues to draw new fighters to Iraq and Syria. The overall force, the first official said, remains about where it was when the bombing started: 20,000 to 30,000 fighters."

— (Oregon) Statesman Journal, "Kitzhaber breaks his silence," by Carol McAlice Curry: "Former Gov. John Kitzhaber ended nearly eight months of silence this week to criticize Portland-based media outlets for creating a frenzied atmosphere of falsehoods that ended with his resigning his unprecedented fourth term in mid-February. But he said that Sept. 9 and Sept. 13 admissions by The Oregonian newspaper that it had run 'an untrue news story that put me and my administration in a false light' have compelled him to speak publicly for the first time since his resignation to 'weigh in on the discussion' … 'Although I was not contacted concerning the retraction, the admission by The Oregonian that it knowingly and materially altered a public document and inserted false information into a direct quote to support a predetermined narrative exposes a troubling pattern, which includes both factual errors and the selective mischaracterization of public records,' Kitzhaber

wrote.

HOT ON THE LEFT

Confederate flag supporters indicted in clash with black partygoers. From the New York Times: "In an unusual legal maneuver, the district attorney in (a) suburb of Atlanta has won indictments against 15 supporters of the Confederate battle flag, accusing them of violating the state's anti-street gang ordinance during a confrontation with black partygoers in July, the district attorney said on Monday. Prosecutors say that members of the group, which calls itself 'Respect the Flag,' threatened a group of African-Americans participating in an outdoor party on July 25."

HOT ON THE RIGHT

Sheldon Adelson warms to Marco Rubio. From Politico: "One of the Republican Party's most sought-after contributors is leaning increasingly toward supporting Marco Rubio — and the Florida senator is racing to win the backing of other uncommitted megadonors who have the potential to direct tens of millions of dollars his way and alter the contours of the Republican primary fight. Last week, during a campaign swing through Las Vegas, Rubio held a meeting in Adelson's offices … Adelson, seated at the head of his conference table, heaped praise on Rubio's performance."

DAYBOOK:

— What's happening today on the campaign trail: Besides the Democratic debate… In Iowa, Rand Paul campaigns in Davenport, Dubuque, Fayette, Waverly and Cedar Falls while live streaming his full day on Facebook. Elsewhere in the state, Ted Cruz makes stops in Keokuk, Burlington and Mt. Pleasant; Mike Huckabee speaks in Iowa City and Bobby Jindal attends an event in Decorah. In New Hampshire, Jeb Bush delivers his speech about repealing ObamaCare in Manchester and speaks to town halls in Keene and Lebanon. Also in the Granite State: Lindsey Graham is stopping in Derry, Bedford, Concord and Newport, while John Kasich campaigns in Bow, Tilton and Littleton.

— On the Hill: The Senate and House are in recess.

— At the White House: President Obama meets with Attorney General Loretta Lynch.

QUOTE OF THE DAY: "How about having the military focusing on hunting down and killing the bad guys…instead of treating it as this crucible for social justice innovations?" — Ted Cruz on Monday in Iowa, referring to the integration of transgender soldiers.

NEWS YOU CAN USE IF YOU LIVE IN D.C.:

— "Cloudy skies and scattered showers arrive thanks to a fast cool front. This un-fair weather friend should mainly affect the morning, but we could see a brief moderate shower or two in the afternoon also in between breaks of sunshine. Temperatures warm to the lower to middle 70s as winds blow from the southwest at just 5 to 10 mph," reports the Capital Weather Gang.

— Channing D. Phillips won the nomination to be U.S. attorney for Washington, D.C. The first thing he needs to do: wrap up the office's troubled five-year probe of ex-District Mayor Vincent Gray.

— Redskins Coach Jay Gruden criticized his own play-calling in the team's 25-19 overtime loss to Atlanta.

— The New York Mets beat the Los Angeles Dodgers, 13-7, in Game 3 of the National League Division Series.

Think tank urges alternative fuel incentives for EPA truck standards

By Kevin Rogers

Proposed rules aimed at improving truck efficiency could save the sector up to 800,000 barrels of oil per day by 2040, but they could be made stronger by including incentives for alternative fuels consistent with the federal government's light-duty program, a think tank argues in a new analysis.

The policy brief, released by Securing America's Future Energy (SAFE), a think tank

focused on reducing transportation-sector oil use, concluded that the rules, which would apply to large freight vehicles, buses, vocational trucks and pickups, would be technologically feasible and cost-effective for the industry and result in significant fuel savings.

But the group warned that the rules, as written, could undercut wider adoption of cleaner vehicle technologies unless changes were made to provide more incentives for their use.

The rules, proposed in June by the Environmental Protection Agency and the National Highway Traffic Safety Administration, would be phased in from 2019 to 2027. They seek to make 2027 model year trucks 24 percent more fuel efficient than those sold in 2018. For smaller vehicles the rules would seek emissions reductions of 16 percent on the same timeline.

They build on the Phase 1 standards for trucks, which apply to model years 2014 to 2018. The regulations are authorized by the Corporate Average Fuel Economy program, adopted in 1975 to reduce vehicle fuel consumption.

The agencies estimated that the rules would cost $25 billion to implement but would save the industry $230 billion over the lifetime of the program. The agencies also said the standards would cut 1 billion metric tons of carbon dioxide emissions and save 1.8 billion barrels of oil over the lifetime of the vehicles.

SAFE estimated that the program, as proposed, would slash the sector's oil demand by 20 percent by 2040, representing a 7.5 percent decrease in overall U.S. fuel use.

However, it called on the agencies to take stronger steps to reduce overall oil reliance by incentivizing natural gas and other alternative vehicle fuels.

"Improvements in vehicle fuel efficiency alone will not insulate the U.S. economy from the volatile oil price conditions typical of the global oil market," the group said.

Specifically, the group called on the agencies to carry over an incentive from the light-duty program that would treat non-petroleum vehicles as 0.67 times more fuel efficient than oil or diesel-fueled trucks. SAFE argued that implementing such a standard would maintain an "even hand across the light and heavy-duty industries."

"If introducing an alternative-fueled vehicle into the light-duty fleet is deemed important for national and economic security, and explicit incentives are provide to promote such introduction, introduction of an AFV into the heavy-duty fleet should contribute to the same goal and be worthy of the same incentives," the group wrote. "Any other determination is arbitrary as it effectively results in differential treatment of the same fuel."

It also urged the agencies to maintain advanced technology credits currently offered under the Phase 1 standards. EPA and NHTSA have considered scrapping the credits, as the new fuel efficiency standards would likely require the use of updated technologies for

compliance.

SAFE argued that cutting the credits would hurt wider adoption of all-electric, hybrid, fuel cell and natural gas-powered trucks. The group also noted that those technologies were all incentivized under the light-duty vehicle program.

"There is simply no rational reason that heavy-duty manufacturers should be held to less flexible requirements than their light-duty counterparts," the group said.

The EPA and NHTSA finished taking comment on the proposal on October 1 and plan to finalize the standards next year.

While truck industry groups in June embraced both the environmental and fuel-saving goals of the program, some, including the American Trucking Association, voiced concern that the compliance period was too short and relied on yet untested technologies to cut emissions.

Energy, trade likely topics in first Democratic debate

By Julie Pace

WASHINGTON (AP) — Hillary Rodham Clinton says she always expected tough competition in the Democratic presidential primary. It's likely she didn't expect it would come from Bernie Sanders, the rumpled independent senator from Vermont and a self-described democratic socialist calling for "political revolution."

The surprise rivalry between Clinton and Sanders will be at the forefront as Democrats take the stage Tuesday in Las Vegas for the party's first debate of the 2016 campaign. The senator and the former secretary of state will be joined by a trio of candidates who occupy the basement of early polls, each looking to change their fortunes with a breakout moment in prime time.

For months, Clinton and Sanders have circled each other cautiously and avoided personal attacks. But in recent days, both have shown that their preference to focus on policy doesn't mean they won't find ways to jab at each other.

Sanders, who has filled arenas with crowds in the thousands and matched Clinton's fundraising take in the past three months, has cast the former secretary of state as a late-comer to the liberal positions he's held for decades on the environment, the economy, and education.

Toyota promises better mileage and ride with Prius hybrid

By Yuri Kageyama

TOKYO (AP) — Toyota Motor Corp. released details for its fourth-generation Prius on Tuesday, promising that improvements in the battery, engine, wind resistance and weight mean better mileage for the world's top-selling hybrid car.

It gets up to 40 kilometers a liter under Japanese tests, which translates to more than 93 miles per gallon, a 20 percent improvement from the 2015 model. In the U.S., it gets 55 mpg in combined city and highway driving, about 10 percent better.

The Prius, which debuted in 1997, goes on sale in Japan in December, and rolls out in the U.S. and other markets early next year. A price was not announced, but it's expected to stay in the same range. The Prius now starts at about $24,000 in the U.S. and 2.4 million yen ($20,000) in Japan.

A hybrid switches back and forth between a gasoline engine and an electric motor to deliver a super-efficient drive, but is increasingly being challenged by even more futuristic technologies, such as the purely electric car and the fuel cell, which are both zero emissions.

Iran's parliament approves nuclear deal with world powers

By Nasser Karimi

TEHRAN, Iran (AP) — Iran's parliament voted Tuesday to support implementing a landmark nuclear deal struck with world powers despite hard-line attempts to derail the bill, suggesting the historic accord will be carried out.

The bill will be reviewed by Iran's 12-member Guardian Council, a group of senior clerics who could return it to lawmakers for further discussion. However, Iran's Supreme Leader Ayatollah Ali Khamenei, who has the final say on key policies, has said it is up to the 290-seat parliament to approve or reject the deal.

Signaling the nuclear deal's likely success, a spokesman for moderate President Hassan Rouhani's administration welcomed the parliament's vote and called it a "historic decision."

"Members of parliament made a well-considered decision today showing they have a good understanding of the country's situation," Mohammad Bagher Nobakht said. "We hope to see acceleration in progress and development of the country from now on."

Scholars seek more research on future of Colorado River

SALT LAKE CITY (AP) — A coalition of scholars across the West is urging the federal government to partner with the National Academy of Sciences to study the future of the

Colorado River, including if climate change is leading to reduced stream flow.

Twenty-three scholars from Western universities sent a letter Tuesday to Interior Secretary Sally Jewell detailing their request for more scientific research on a host of issues related to the Colorado River.

Chief among the concerns is if there will be enough water in the river to support 36 million users in seven U.S. states and parts of Mexico over the next 50 years.

The scholars argue the federal government is relying on a projection of a 9-percent stream flow decline by 2060, while skimming over other estimates that suggest it could fall by as much as 45 percent by 2050 due to climate change.

Wyoming wildfire forces hundreds of evacuations

By The Associated Press

CASPER, Wyo. (AP) — A wildfire tearing through central Wyoming destroyed buildings and forced hundreds of evacuations.

The fire has burned at least 10 homes and several outbuildings, with many of the structures listed as complete losses.

A second day in a row of dry weather and strong wind Monday caused the fire to spread across more than 15 square miles of grassland near Evansville, just east of Casper.

Nobody was reported hurt but firefighters struggled to contain the flames. Some 100 firefighters and two air tankers were on the scene.

Bosnian coal accident: 4 miners dead, 2 injured

By The Associated Press

KAKANJ, Bosnia-Herzegovina (AP) — A spokesman for a Bosnian coal mine says four miners died and two were injured in an overnight accident.

Arif Zekic, spokesman for the Begici-Bistrani mine in the town of Kakanj, said that 28 miners were in the pit when the accident occurred at 1 a.m. Tuesday. He said the two injured were hospitalized with non-lethal wounds, and the other miners left the pit safely.

The investigation of the accident is ongoing.

Subject: Morning Consult Energy, Presented by Southern Company: Alaska Gov. Proposes Drilling in ANWR to Fund Climate Change Programs; Volkswagen to Cut Annual Spending by $1.1 Billion

By Deirdra O'Regan

Today's Washington Brief

- Alaska Gov. Bill Walker (I) proposed an increase in oil drilling in places such as the Arctic National Wildlife Refuge (ANWR) to boost state revenue and pay for climate change-related programs. Alaska relies on oil and gas production for much of its budget, which has been hit by falling oil prices. (The Hill)

- Lower gas prices means no increase in Social Security benefits next year, which will affect more than 20 percent of Americans. Cheaper gas is stalling inflation and dragging down the annual cost-of-living index, blocking a rise in payments for only the third time in 40 years. (The Associated Press)

- A new study from Johns Hopkins University suggests that pregnant women living near fracking wells are more likely to give birth prematurely or have high risk pregnancies. An official for a petroleum industry group says the research "relies heavily on assumptions." (McClatchy DC)

Today's Business Brief

- Volkswagen AG will reduce annual investment spending for its main passenger-car brand by $1.1 billion as it tries to recover from a diesel emissions-cheating scandal. The carmaker said it will switch to a different technology for treating diesel emissions "as soon as possible." (Bloomberg News)

- U.S. oil output will drop in 2016 for the first time in eight years as producers slash spending, according to the Organization of the Petroleum Exporting Countries. OPEC slashed its U.S. oil production forecast for next year by 280,000 barrels a day, to 13.538 million barrels, consistent with U.S. Energy Information Administration predictions. (The Wall Street Journal)

- Traditional power companies are increasingly moving into small-scale solar energy. Solar panel installation grew by more than 50 percent in 2014 and is on track for another record-breaking year. (The Associated Press)

General

Lower gas prices means no Social Security increase next year
Stephen Ohlemacher, The Associated Press

For just the third time in 40 years, millions of Social Security recipients, disabled veterans and federal retirees can expect no increase in benefits next year, unwelcome news for more than one-fifth of the nation's population. They can blame low gas prices.

Volkswagen to Cut Spending by $1.1 Billion Amid Diesel Scandal

Naomi Kresge, Bloomberg News

Volkswagen AG will reduce investment spending at its main passenger-car brand by 1 billion euros ($1.1 billion) a year and speed up other cost cuts in the wake of a diesel emissions-cheating scandal. The German carmaker will switch to a different technology for treating diesel emissions in Europe and North America "as soon as possible," the Wolfsburg, Germany-based carmaker said in a statement Tuesday.

Volkswagen Is Not The Only Manufacturer Failing To Live Up To Regulatory Test Performance
James Ayre, CleanTechnica

While Volkswagen may well be the only auto manufacturer with higher-ups arrogant enough to think that they can commit such blatant fraud forever without experiencing any repercussions, the German company is certainly not the only auto manufacturer that produces vehicles that show a large discrepancy between real-world performance and testing-cycle performance. Amongst the other manufacturers that have been shown by recent research to emit significantly more pollution during real-world operation than during testing-cycle operation are: Mercedes-Benz, Honda, Mitsubishi, and Mazda.

Here's who's been dominating the energy buying space
Cara Smith, Houston Business Journal

Private companies and private equity-backed groups were responsible for 41 percent of the purchases of exploration and production energy companies in 2014, and experts say that private equity groups were likely responsible for the lion's share of those deals. That's according to data from IHS Herold, an independent research firm that specializes in corporate transactions.

S&P 500 Futures Fall on Weak China Imports; Molson Coors Rallies
Roxana Zega, Bloomberg News

Standard & Poor's 500 Index E-mini contractsexpiring in December fell 0.4 percent to 2002.5 at 7:42 a.m in London, inching lower after China's imports extended the longest losing streak in six years. Dow Jones Industrial Average contracts lost 70 points, or 0.4 percent, to 16,971, while those on the Nasdaq 100 Index dropped 24 points, or 0.5 percent.

Oil & Natural Gas

Oil Falls to One-Week Low as IEA Counters OPEC View on Recovery
Grant Smith, Bloomberg News

Oil slid to a one-week low in New York as the IEA's prediction that the global surplus will persist next year countered OPEC's view of a recovering market. West Texas

Intermediate futures slipped 0.6 percent after Monday's 5.1 percent drop, the biggest in six weeks.

OPEC Sees U.S. Oil Output Dropping Next Year
Benoit Faucon, The Wall Street Journal

U.S. oil output will decline in 2016 for the first time in eight years as producers slash spending, the Organization of the Petroleum Exporting Countries said Monday, while the producer group continues pumping at high levels. In its closely watched monthly oil market report, OPEC slashed its U.S. oil production forecast by 280,000 barrels a day next year, to 13.538 million barrels a day, a number that includes natural gas liquids.

Johns Hopkins study links fracking and premature births
Sean Cockerham, McClatchy DC

New research from Johns Hopkins University suggests pregnant women living near fracking wells in Pennsylvania are more likely to give birth prematurely or have high risk pregnancies. "Now that we know this is happening we'd like to figure out why," said Brian Schwartz, lead researcher and a professor at the Johns Hopkins Bloomberg School of Public Health.

Cutting Staff Pay to Keep Workers
Chester Dawson And Benoît Faucon, The Wall Street Journal

As layoffs become the energy industry's main response to low oil prices, a handful of producers are aiming to trim personnel costs without pink slips by spreading the pain among their employees. Companies including Occidental Petroleum Corp. and Canadian Natural Resources Ltd. are employing hiring freezes, caps on bonuses, and even across-the-board wage cuts to preserve jobs.

Marathon Oil court victory could deter similar lawsuits, expert says
Suzanne Edwards, Houston Business Journal

A recent court victory for Houston-based Marathon Oil Corp. may curtail a pervasive category of lawsuits brought by plaintiffs living near drilling activity. On Oct. 7, a San Antonio Court of Appeals affirmed an earlier trial court decision in Marathon's favor, which will put a greater burden of proof on plaintiffs who complain that oilfield operations negatively impact their health and property.

Oil Sands Boom Dries Up in Alberta, Taking Thousands of Jobs With it
Ian Austen, The New York Times

With oil prices falling precipitously, capital-intensive projects rooted in the heavy crude mined from Alberta's oil sands are losing money, contributing to the loss of about 35,000 energy industry jobs across the province.

Phillips 66 Unveils Lower Spending Plan for 2016, Boosts Buybacks

Lisa Beilfuss, The Wall Street Journal

Phillips 66 said Monday that it has set its 2016 capital budget at $3.6 billion, down from $4.6 billion last year, and boosted its stock-buyback plan by $2 billion. The Houston-based company said the budget, excluding Phillips 66 Partners 's capital spending, is focused on its midstream business lines. The company plans to invest $2 billion there, and it said it would spend $1.2 billion on its refining segment.

Gazprom Restarts Gas Deliveries to Ukraine
Laura Mills, The Wall Street Journal

Russian state natural-gas company PAO Gazprom resumed deliveries to Ukraine on Monday, after halting exports in July, reducing the risk of disruption to supplies to the rest of Europe this winter. Deliveries were resumed after Ukraine paid $234 million of a total $500 million prepayment expected for gas in October, Gazprom chief executive Alexei Miller said.

Utilities & Infrastructure

DOE: Climate change poses a threat to grid resiliency
Robert Walton, Utility Dive

The Obama administration has released a report examining the regional impacts of climate change, finding widespread impacts to the utility industry and a potential threat to grid resiliency. DOE found electric grid operations and infrastructure in every region are vulnerable to a variety of impacts, including increasing temperatures, heavy rainfall events, wildfires and hurricanes.

Tests showed rail defect 2 months before W.Va. oil train derailed
Curtis Tate, McClatchy DC

Two separate tests in the two months prior to a fiery oil train derailment in West Virginia earlier this year showed the presence of a rail defect, according to a report on the incident. But neither the railroad nor the contractor who did the tests followed up on the results in December 2014 and January 2015, and the rail broke under a 107-car CSX train loaded with Bakken crude oil.

Renewables

Big utilities enter market for small rooftop solar
Ray Henry and Susan Montoya Bryan, The Associated Press

Traditional power companies are getting into small-scale solar energy and competing for space on your rooftop. The emerging competition comes as utilities and smaller solar installers fight over the future of the U.S. energy system.

Loss of tax credit puts North Carolina solar industry under a cloud
Steve DeVane, The Fayetteville Observer

State and local officials worry that an end this year to tax credits for solar farms could halt or significantly curtail an industry that has helped build the tax base and generate economic activity in job-hungry rural areas. Any reduction in the industry could hit especially hard in the Cape Fear region, which is home to dozens of solar farms.

Coal

California pension funds to drop coal-mining companies
Chris Megerian, Los Angeles Times

Gov. Jerry Brown on Thursday signed legislation forcing California's pension systems, the two largest public funds in the country, to divest from coal companies. The measure, SB 185 by state Senate leader Kevin de León (D-Los Angeles), requires the funds to sell their holdings in companies that derive at least half of their revenue from mining coal used to generate electricity.

The Fall of King Coal
Tim Murphy, Mother Jones

Don Blankenship earned his way to this summit by reducing many of the nearby mountaintops to heaps of gravel and harvesting the bituminous seams inside them to nearly triple his company's revenue. Heavyset and balding, with a slug of a mustache and anthracite eyes, he was a harsh taskmaster whose cutthroat management style transformed what was once a modest family business into the region's largest coal producer.

Prices mostly unchanged as US OTC thermal coal market shut out again
Jim Levesque, Platts

The US over-the-counter thermal coal market was shut out Friday for the second time this week and the 18th time in 2015 as no physical or financial trades were seen or reported. The inactivity kept prices mostly unchanged.

Nuclear

America's newest nuke plant shows why nuclear power is dying in the U.S.
Michael Hiltzik, Los Angeles Times

Shortly after New Year's Day, the Tennessee Valley Authority is expected to bring its newest nuclear power plant online. The TVA says Watts Bar Unit 2 in Spring City,

Tenn., about 50 miles north of Chattanooga, will be fully modern and superlatively safe — "the nation's first new nuclear generation of the 21st century," the utility says.

Climate

Alaska gov: More drilling needed to fund climate change programs
Devin Henry, The Hill

Alaska Gov. Bill Walker (I) says the state needs to drill more oil to mitigate the impact of climate change. Alaska has no sales or income tax and relies on oil and gas production for much of its operating budget.

UN climate science head calls for carbon pricing
Timothy Cama, The Hill

The new head of the United Nations's climate science agency said countries around the world need to implement systems to put a price on carbon dioxide emissions. Hoesung Lee, chairman of the Intergovernmental Panel on Climate Change (IPCC), said at a news conference in his native South Korea that he wants the agency to put more focus on solving problems around climate change.

Opinions, Editorials & Perspectives

VW Scandal Reveals Major Cracks in EPA's Emissions Reduction Strategy
Carol Werner, Morning Consult

Volkswagen's installation of emissions testing "defeat devices" in its diesel cars was decidedly illegal, and the company should be severely punished for flouting our pollution controls in such an egregious manner. But its cheating is merely the proverbial tip of the emissions iceberg.

Rooftop Solar and the Free Market – What the Taxpayers Protection Alliance Gets Wrong
Lyndon Rive, Morning Consult

There are misconceptions about rooftop solar, and then there are intentional obfuscations made by those who are determined to see rooftop solar fail. Whichever best describes the views of Taxpayers Protection Alliance President David Williams, his Sept. 30 opinion piece in Morning Consult demands a response.

How 'grid neutrality' can build the backbone for the modern grid
Herman K. Trabish, Utility Dive

As utilities and customers look to cut carbon emissions and modernize their grids through the use of distributed energy resources (DERs), one of the nagging questions facing sector stakeholders nationwide is how to decide where, when, and how new technologies like rooftop solar or storage will be deployed on the grid. New rules are needed, many stakeholders say, to convert the old grid, based on centralized generation, to one that readily integrates and promotes the proliferation of new grid technologies.

A Message from Southern Company:

Southern Company announces a new facility that will help the company deliver the solutions its customers need for today – and for tomorrow. Learn more about Southern Company's Energy Innovation Center.

Research Reports, Issue Briefs & Case Studies

Unconventional Natural Gas Development and Birth Outcomes in Pennsylvania, USA.
Joan Casey et al., Epidemiology

Unconventional natural gas development has expanded rapidly. In Pennsylvania, the number of producing wells increased from 0 in 2005 to 3,689 in 2013. Prenatal residential exposure to unconventional natural gas development activity was associated with two pregnancy outcomes, adding to evidence that unconventional natural gas development may impact health.

UN climate science head calls for carbon pricing
Timothy Cama, The Hill

The new head of the United Nations's climate science agency said countries around the world need to implement systems to put a price on carbon dioxide emissions. Hoesung Lee, chairman of the Intergovernmental Panel on Climate Change (IPCC), said at a news conference in his native South Korea that he wants the agency to put more focus on solving problems around climate change.

VW Scandal Reveals Major Cracks in EPA's Emissions Reduction Strategy
Carol Werner, Morning Consult

Volkswagen's installation of emissions testing "defeat devices" in its diesel cars was decidedly illegal, and the company should be severely punished for flouting our pollution controls in such an egregious manner. But its cheating is merely the proverbial tip of the emissions iceberg.

Rooftop Solar and the Free Market – What the Taxpayers Protection Alliance Gets Wrong
Lyndon Rive, Morning Consult

There are misconceptions about rooftop solar, and then there are intentional obfuscations made by those who are determined to see rooftop solar fail. Whichever best describes the views of Taxpayers Protection Alliance President David Williams, his Sept. 30 opinion piece in Morning Consult demands a response.

How 'grid neutrality' can build the backbone for the modern grid
Herman K. Trabish, Utility Dive

As utilities and customers look to cut carbon emissions and modernize their grids through the use of distributed energy resources (DERs), one of the nagging questions facing sector stakeholders nationwide is how to decide where, when, and how new technologies like rooftop solar or storage will be deployed on the grid. New rules are needed, many stakeholders say, to convert the old grid, based on centralized generation, to one that readily integrates and promotes the proliferation of new grid technologies.

A Message from Southern Company:

Southern Company announces a new facility that will help the company deliver the solutions its customers need for today – and for tomorrow. Learn more about Southern Company's Energy Innovation Center.

Unconventional Natural Gas Development and Birth Outcomes in Pennsylvania, USA.
Joan Casey et al., Epidemiology

Unconventional natural gas development has expanded rapidly. In Pennsylvania, the number of producing wells increased from 0 in 2005 to 3,689 in 2013. Prenatal residential exposure to unconventional natural gas development activity was associated with two pregnancy outcomes, adding to evidence that unconventional natural gas development may impact health.

Subject: Morning Consult Energy, Presented by Southern Company: Alaska Gov. Proposes Drilling in ANWR to Fund Climate Change Programs; Volkswagen to Cut Annual Spending by $1.1 Billion

By Deirdra O'Regan

Today's Washington Brief

- Alaska Gov. Bill Walker (I) proposed an increase in oil drilling in places such as the Arctic National Wildlife Refuge (ANWR) to boost state revenue and pay for climate change-related programs. Alaska relies on oil and gas production for much of its budget, which has been hit by falling oil prices. (The Hill)

- Lower gas prices means no increase in Social Security benefits next year, which will affect more than 20 percent of Americans. Cheaper gas is stalling inflation and dragging down the annual cost-of-living index, blocking a rise in payments for only the third time in 40 years. (The Associated Press)

- A new study from Johns Hopkins University suggests that pregnant women living near fracking wells are more likely to give birth prematurely or have high risk pregnancies. An official for a petroleum industry group says the research "relies heavily on assumptions." (McClatchy DC)

Today's Business Brief

- Volkswagen AG will reduce annual investment spending for its main passenger-car brand by $1.1 billion as it tries to recover from a diesel emissions-cheating scandal. The carmaker said it will switch to a different technology for treating diesel emissions "as soon as possible." (Bloomberg News)

- U.S. oil output will drop in 2016 for the first time in eight years as producers slash spending, according to the Organization of the Petroleum Exporting Countries. OPEC slashed its U.S. oil production forecast for next year by 280,000 barrels a day, to 13.538 million barrels, consistent with U.S. Energy Information Administration predictions. (The Wall Street Journal)

- Traditional power companies are increasingly moving into small-scale solar energy. Solar panel installation grew by more than 50 percent in 2014 and is on track for another record-breaking year. (The Associated Press)

General

Lower gas prices means no Social Security increase next year
Stephen Ohlemacher, The Associated Press

For just the third time in 40 years, millions of Social Security recipients, disabled veterans and federal retirees can expect no increase in benefits next year, unwelcome news for more than one-fifth of the nation's population. They can blame low gas prices.

Volkswagen to Cut Spending by $1.1 Billion Amid Diesel Scandal

Naomi Kresge, Bloomberg News

Volkswagen AG will reduce investment spending at its main passenger-car brand by 1 billion euros ($1.1 billion) a year and speed up other cost cuts in the wake of a diesel emissions-cheating scandal. The German carmaker will switch to a different technology for treating diesel emissions in Europe and North America "as soon as possible," the Wolfsburg, Germany-based carmaker said in a statement Tuesday.

Volkswagen Is Not The Only Manufacturer Failing To Live Up To Regulatory Test Performance
James Ayre, CleanTechnica

While Volkswagen may well be the only auto manufacturer with higher-ups arrogant enough to think that they can commit such blatant fraud forever without experiencing any repercussions, the German company is certainly not the only auto manufacturer that produces vehicles that show a large discrepancy between real-world performance and testing-cycle performance. Amongst the other manufacturers that have been shown by recent research to emit significantly more pollution during real-world operation than during testing-cycle operation are: Mercedes-Benz, Honda, Mitsubishi, and Mazda.

Here's who's been dominating the energy buying space
Cara Smith, Houston Business Journal

Private companies and private equity-backed groups were responsible for 41 percent of the purchases of exploration and production energy companies in 2014, and experts say that private equity groups were likely responsible for the lion's share of those deals. That's according to data from IHS Herold, an independent research firm that specializes in corporate transactions.

S&P 500 Futures Fall on Weak China Imports; Molson Coors Rallies
Roxana Zega, Bloomberg News

Standard & Poor's 500 Index E-mini contractsexpiring in December fell 0.4 percent to 2002.5 at 7:42 a.m in London, inching lower after China's imports extended the longest losing streak in six years. Dow Jones Industrial Average contracts lost 70 points, or 0.4 percent, to 16,971, while those on the Nasdaq 100 Index dropped 24 points, or 0.5 percent.

Oil & Natural Gas

Oil Falls to One-Week Low as IEA Counters OPEC View on Recovery
Grant Smith, Bloomberg News

Oil slid to a one-week low in New York as the IEA's prediction that the global surplus will persist next year countered OPEC's view of a recovering market. West Texas

Intermediate futures slipped 0.6 percent after Monday's 5.1 percent drop, the biggest in six weeks.

OPEC Sees U.S. Oil Output Dropping Next Year
Benoit Faucon, The Wall Street Journal

U.S. oil output will decline in 2016 for the first time in eight years as producers slash spending, the Organization of the Petroleum Exporting Countries said Monday, while the producer group continues pumping at high levels. In its closely watched monthly oil market report, OPEC slashed its U.S. oil production forecast by 280,000 barrels a day next year, to 13.538 million barrels a day, a number that includes natural gas liquids.

Johns Hopkins study links fracking and premature births
Sean Cockerham, McClatchy DC

New research from Johns Hopkins University suggests pregnant women living near fracking wells in Pennsylvania are more likely to give birth prematurely or have high risk pregnancies. "Now that we know this is happening we'd like to figure out why," said Brian Schwartz, lead researcher and a professor at the Johns Hopkins Bloomberg School of Public Health.

Cutting Staff Pay to Keep Workers
Chester Dawson And Benoît Faucon, The Wall Street Journal

As layoffs become the energy industry's main response to low oil prices, a handful of producers are aiming to trim personnel costs without pink slips by spreading the pain among their employees. Companies including Occidental Petroleum Corp. and Canadian Natural Resources Ltd. are employing hiring freezes, caps on bonuses, and even across-the-board wage cuts to preserve jobs.

Marathon Oil court victory could deter similar lawsuits, expert says
Suzanne Edwards, Houston Business Journal

A recent court victory for Houston-based Marathon Oil Corp. may curtail a pervasive category of lawsuits brought by plaintiffs living near drilling activity. On Oct. 7, a San Antonio Court of Appeals affirmed an earlier trial court decision in Marathon's favor, which will put a greater burden of proof on plaintiffs who complain that oilfield operations negatively impact their health and property.

Oil Sands Boom Dries Up in Alberta, Taking Thousands of Jobs With it
Ian Austen, The New York Times

With oil prices falling precipitously, capital-intensive projects rooted in the heavy crude mined from Alberta's oil sands are losing money, contributing to the loss of about 35,000 energy industry jobs across the province.

Phillips 66 Unveils Lower Spending Plan for 2016, Boosts Buybacks

Lisa Beilfuss, The Wall Street Journal

Phillips 66 said Monday that it has set its 2016 capital budget at $3.6 billion, down from $4.6 billion last year, and boosted its stock-buyback plan by $2 billion. The Houston-based company said the budget, excluding Phillips 66 Partners 's capital spending, is focused on its midstream business lines. The company plans to invest $2 billion there, and it said it would spend $1.2 billion on its refining segment.

Gazprom Restarts Gas Deliveries to Ukraine
Laura Mills, The Wall Street Journal

Russian state natural-gas company PAO Gazprom resumed deliveries to Ukraine on Monday, after halting exports in July, reducing the risk of disruption to supplies to the rest of Europe this winter. Deliveries were resumed after Ukraine paid $234 million of a total $500 million prepayment expected for gas in October, Gazprom chief executive Alexei Miller said.

Utilities & Infrastructure

DOE: Climate change poses a threat to grid resiliency
Robert Walton, Utility Dive

The Obama administration has released a report examining the regional impacts of climate change, finding widespread impacts to the utility industry and a potential threat to grid resiliency. DOE found electric grid operations and infrastructure in every region are vulnerable to a variety of impacts, including increasing temperatures, heavy rainfall events, wildfires and hurricanes.

Tests showed rail defect 2 months before W.Va. oil train derailed
Curtis Tate, McClatchy DC

Two separate tests in the two months prior to a fiery oil train derailment in West Virginia earlier this year showed the presence of a rail defect, according to a report on the incident. But neither the railroad nor the contractor who did the tests followed up on the results in December 2014 and January 2015, and the rail broke under a 107-car CSX train loaded with Bakken crude oil.

Renewables

Big utilities enter market for small rooftop solar
Ray Henry and Susan Montoya Bryan, The Associated Press

Traditional power companies are getting into small-scale solar energy and competing for space on your rooftop. The emerging competition comes as utilities and smaller solar installers fight over the future of the U.S. energy system.

Loss of tax credit puts North Carolina solar industry under a cloud
Steve DeVane, The Fayetteville Observer

State and local officials worry that an end this year to tax credits for solar farms could halt or significantly curtail an industry that has helped build the tax base and generate economic activity in job-hungry rural areas. Any reduction in the industry could hit especially hard in the Cape Fear region, which is home to dozens of solar farms.

Coal

California pension funds to drop coal-mining companies
Chris Megerian, Los Angeles Times

Gov. Jerry Brown on Thursday signed legislation forcing California's pension systems, the two largest public funds in the country, to divest from coal companies. The measure, SB 185 by state Senate leader Kevin de León (D-Los Angeles), requires the funds to sell their holdings in companies that derive at least half of their revenue from mining coal used to generate electricity.

The Fall of King Coal
Tim Murphy, Mother Jones

Don Blankenship earned his way to this summit by reducing many of the nearby mountaintops to heaps of gravel and harvesting the bituminous seams inside them to nearly triple his company's revenue. Heavyset and balding, with a slug of a mustache and anthracite eyes, he was a harsh taskmaster whose cutthroat management style transformed what was once a modest family business into the region's largest coal producer.

Prices mostly unchanged as US OTC thermal coal market shut out again
Jim Levesque, Platts

The US over-the-counter thermal coal market was shut out Friday for the second time this week and the 18th time in 2015 as no physical or financial trades were seen or reported. The inactivity kept prices mostly unchanged.

Nuclear

America's newest nuke plant shows why nuclear power is dying in the U.S.
Michael Hiltzik, Los Angeles Times

Shortly after New Year's Day, the Tennessee Valley Authority is expected to bring its newest nuclear power plant online. The TVA says Watts Bar Unit 2 in Spring City,

Tenn., about 50 miles north of Chattanooga, will be fully modern and superlatively safe — "the nation's first new nuclear generation of the 21st century," the utility says.

Climate

Alaska gov: More drilling needed to fund climate change programs
Devin Henry, The Hill

Alaska Gov. Bill Walker (I) says the state needs to drill more oil to mitigate the impact of climate change. Alaska has no sales or income tax and relies on oil and gas production for much of its operating budget.

UN climate science head calls for carbon pricing
Timothy Cama, The Hill

The new head of the United Nations's climate science agency said countries around the world need to implement systems to put a price on carbon dioxide emissions. Hoesung Lee, chairman of the Intergovernmental Panel on Climate Change (IPCC), said at a news conference in his native South Korea that he wants the agency to put more focus on solving problems around climate change.

LOBBYING:

Mary Landrieu signs FutureGen as 1st client

Kevin Bogardus, E&E reporter

Published: Friday, October 9, 2015

Former Sen. Mary Landrieu (D-La.) has registered her first lobbying client: FutureGen Industrial Alliance Inc., a nonprofit group backing the clean coal project.

Landrieu, now a senior policy adviser at Van Ness Feldman LLP, is one of five lobbyists signed up to lobby on "funding issues regarding the FutureGen 2.0 project," according to lobbying disclosure records released by the Senate this week.

The Van Ness lobbyists have been working for the group since Aug. 25, according to the firm's registration.

The alliance is a nonprofit group set up to support FutureGen 2.0, a near-zero-emissions coal power plant. Its members include industry players such as Alpha Natural Resources Inc. and Peabody Energy Corp., according to its website.

The lobbying push comes after the Department of Energy pulled the plug on its involvement in the project earlier this year, dealing it a fatal blow (*E&E Daily*, Feb. 4).

The firm manages the Coal Utilization Research Council, an industry group that promotes clean coal technology. One of the Van Ness lobbyists registered to lobby for the FutureGen alliance, Shannon Angielski, is CURC's associate director.

Van Ness is registered to lobby for CURC and several other energy clients, such as American Electric Power Co., Shell Oil Co. and Sempra LNG. The firm has earned more than $1.5 million in lobbying fees so far this year, according to the Center for Responsive Politics, a campaign finance watchdog group.

Landrieu, a former chairman of the Senate Energy and Natural Resources Committee, joined Van Ness in May after losing her 2014 re-election bid to Sen. Bill Cassidy (R-La.) (*Greenwire*, May 26).

Under ethics law, the former Louisiana senator can't lobby her colleagues on Capitol Hill for two years after leaving the Senate. Landrieu, however, is allowed to lobby the Obama administration during that period.

Reporter Manuel Quiñones contributed.

CALIFORNIA:

Brown signs coal divestment, other environment bills

Anne C. Mulkern, E&E reporter

Published: Friday, October 9, 2015

California will drop all investments in coal under a bill Gov. Jerry Brown (D) signed yesterday, one of several energy and environment measures he enacted.

S.B. 185 from Senate President Pro Tem Sen. Kevin de León requires California's public pension funds, CalPERS and CalSTRS, to divest from thermal coal holdings. The Golden State will be the first in the United States to do so, a de León statement said.

CalPERS and CalSTRS are the largest public pension funds in the nation, with $293 billion and $184 billion in assets, respectively, de León's statement added.

"Coal is a losing bet for California retirees and it's also incredibly harmful to our health and the health of our environment," de León said. "It has been a pleasure to work with CalPERS and CalSTRS to improve retirement security for our public employees while also aligning our investments with our values as a state."

Bill McKibben, co-founder of 350.org, praised the move.

"California, once again, is helping show the way," McKibben said. "These are two of the 20 largest pension funds on planet Earth, and this first big step will resonate in every financial market around the world. It's a bad day to be a coal baron, and a signal day for the divestment movement and for the Golden State."

But CalPERS and CalSTRS officials know that divestment efforts are futile, said Matt Dempsey, senior director of the global energy and natural resources sector at FTI Consulting Strategic Communications, which sometimes speaks for the fossil fuel industry.

He sent quotes from leaders of the funds, including one attributed to CalSTRS Chief Investment Officer Christopher Ailman and published April 7 on the conservative online Breitbart News Network. It said Ailman told the group's board that "I've been involved in five divestments for our fund. All five of them we've lost money, and all five of them have not brought about social change." The quote could not be immediately independently verified.

"When the chief investment officer of CalSTRS says that every time they've been forced to divest, they've lost money, I think folks need to pay attention to that," Dempsey said. "And that's especially true of the millions of public employees whose retirement security is tied to the performance of these funds."

Brown also approved:

- A.B. 1288 from Assembly Speaker Toni Atkins (D). It adds two appointments to the Air Resources Board, to represent communities that are low-income, ethnic minority, and hard-hit by pollution and the effects of climate change. The measure will "help ensure one of the state's top environmental regulatory bodies -- the California Air Resources Board -- is more representative of the state's diversity and those most impacted by pollution," a statement from Brown's office said.

- S.B. 414 from Sen. Hannah-Beth Jackson (D). It makes some changes to prepare better for oil spills. She represents the Santa Barbara area, where an on-land pipe owned by Plains All American Pipeline ruptured May 19. It sent 105,000 barrels of crude onto the beach, and about 21,000 gallons of that oil flowed into the Pacific Ocean. The measure requires, among other items, that the Office of Spill Prevention and Response (OSPR) administrator arrange drills and exercises with the U.S. Coast Guard, consult peer-reviewed scientific literature on chemical dispersants and ask that the California Dispersant Plan be updated by May 1, 2016. The OSPR administrator also must submit a report to the Legislature by Jan. 1, 2017, "assessing best achievable technology of equipment for oil spill prevention, preparedness and response," according to a Senate bill analysis. "This shall include an assessment of a new method -- estimated recovery system potential -- for evaluating oil skimmers."

- Brown also signed Jackson's S.B. 295. It requires the state fire marshal or someone authorized by the marshal beginning in 2017 to annually inspect all intrastate pipelines and operators of intrastate pipelines. Brown in a signing statement noted that the oil spill earlier this year in Santa Barbara "impacted birds, animals and other marine life and caused the closure of beaches and fishing." He added, "Our coastline and surrounding environments contribute to the great and unique landscape of California. These bills improve planning for and prevention of oil spills and our response when

spills occur."

- A.B. 692 from Assemblyman Bill Quirk (D). It requires every state agency that buys transportation fuels to purchase at least 3 percent "very low carbon transportation fuels," beginning Jan. 1, 2017, with the percentage increasing by 1 point each year until 2024.

- A.B. 682 from Assemblyman Das Williams (D). It lets people who live in mobile home parks make certain energy-related upgrades without filing an application with the Department of Housing and Community Development. They can also fix defects related to the heat-producing or electrical systems without filing an application with HCD.

- A.B. 1236 by Assemblyman David Chiu (D). It mandates that counties and cities create an expedited permitting and inspection process for electric vehicle charging stations.

- A.B. 693 from Assemblywoman Susan Talamantes Eggman (D). It creates the Multifamily Affordable Housing Solar Roofs Program. That will provide financial incentives for solar on multifamily affordable housing properties.

CAMPAIGN 2016:

Trump takes wind farm challenge to U.K.'s highest court

Published: Friday, October 9, 2015

Republican presidential front-runner Donald Trump took his lawsuit against a proposed offshore wind farm to the United Kingdom's highest court yesterday to save the view from a resort he owns on Scotland's North Sea coast.

Trump, whose mother is Scottish, bought the Menie Estate in Aberdeenshire in 2006, transforming protected coastal dunes into a golf course.

"When I saw this piece of land I was overwhelmed by the imposing dunes and rugged Aberdeenshire coastline," Trump said in a personal message on his golf course website. "I knew that this was the perfect site for Trump International, Scotland."

After the Scottish government approved Aberdeen Offshore Wind Farm Ltd.'s proposal to build 11 turbines in 2013, Trump sued to stop what he called a "monstrous" eyesore 2 miles from his resort.

Trump has accused former Scottish First Minister Alex Salmond, who had been a Trump ally, of skewing the approval process in favor of the more than $350 million project.

Trump was not in Westminster yesterday as his attorneys challenged the legality of the wind company's application before the U.K. Supreme Court, but he has threatened to take his lawsuit to European courts if he should lose in the United Kingdom (Owen Bowcott, London *Guardian*, Oct. 8). **-- DTB**

CLIMATE:

Capito bill would clip EPA's wings on Clean Power Plan -- CBO

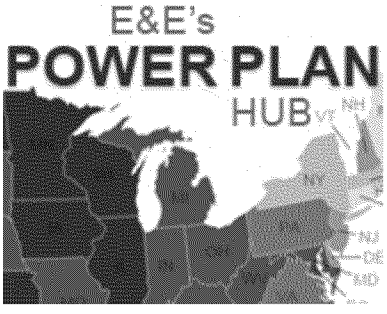
Jean Chemnick, E&E reporter

Published: Friday, October 9, 2015

Sen. Shelley Moore Capito's bill to scuttle U.S. EPA's power plant carbon rules would also severely restrict the scope of any replacement rules, the Congressional Budget Office said yesterday.

The West Virginia Republican's bill, S. 1324, would kill the Clean Power Plan by allowing states to opt out of compliance at will without fear that a federal implementation plan would be constructed to take its place, the CBO report noted. It also would require the agency to set aside rules for new and modified facilities that were final in August and that together make up the core of President Obama's second-term Climate Action Plan.

While the measure would allow the agency to put forward rules to take their place -- and CBO assumes that EPA would do so -- it's not clear that those rules could require technology that differs from a business-as-usual scenario. Rules for existing plants could not be promulgated until EPA makes a report to Congress on their climate and economic effects and issues state-specific plans.



A separate provision of the bill, which CBO does not mention, would bar EPA from regulating under Section 111(d) of the Clean Air Act at all if it has already done so under Section 112, effectively codifying in law a legal objection often raised by opponents of the Clean Air Act that will figure in coming litigation. EPA's 2011 mercury and air toxics rule is written under Section 112.

Rules for new and modified facilities must be based "on actual emissions levels achieved by at least six different electric generating units across the United States when operating for a continuous 12-month period." So, in effect, they couldn't go beyond the current state-of-the-art technology for newly built coal and natural gas generation.

The report acknowledges that the Capito measure "would not prohibit EPA from continuing to work on activities related to power plants, such as developing guidance and providing technical assistance to states." But David Doniger, director of the climate and clean air program at the Natural Resources Defense Council, said it would dramatically change EPA's regulatory authority.

"It's basically saying that instead of being a plumber that comes to your home and fixes your pipes, [EPA is] now allowed to give you advice over the phone," he said.

The Environment and Public Works Committee approved the Capito bill in August, and Senate Majority Leader Mitch McConnell (R-Ky.) has expressed his support. It tracks with his strategy of persuading state governors to "just say no" to implementing EPA's rule.

But while the House has passed roughly similar legislation, it remains unclear whether McConnell will make room for Capito's bill in a busy fall legislative schedule -- especially as it seems unlikely it would garner the 60 votes needed to pass.

Instead, McConnell and Environment and Public Works Chairman James Inhofe (R-Okla.) are readying Congressional Review Act resolutions for after EPA publishes the new and existing power plant rules in the *Federal Register*. They could pass the Senate with a simple majority of the vote, and while they would not be expected to withstand a presidential veto, McConnell hopes they would show the world ahead of this year's climate talks in Paris that Congress is not united behind Obama's climate pledges.

Doniger criticized Republicans for seeking to undermine global confidence in the U.S. pledge.

"The Republicans spent more than a decade arguing that we shouldn't act alone because other countries are unreliable, now they're arguing that they shouldn't act because we're unreliable," he said.

OIL AND GAS:

La. natural gas plant explosion kills 3

Published: Friday, October 9, 2015

An explosion and fire at a Louisiana natural gas plant yesterday killed three workers.

The Gibson, La., plant was not operating before the explosion but had caught fire during maintenance work on a device to filter impurities from natural gas.

Two other contractors were injured in the accident, according to plant owner Williams Partners LP.

"We are deeply saddened by this tragedy. Our thoughts and prayers are with those injured and their families during this very difficult time," said Warren Toups, Williams' operations manager (Alison Sider, *Wall Street Journal*, Oct. 8). **-- BTP**

RENEWABLE ENERGY:

NREL cuts solar energy staff after funding drop

Published: Friday, October 9, 2015

Colorado's National Renewable Energy Laboratory laid off 15 solar energy researchers this week and plans to buy another 50 to 60 people out of their contracts.

The cuts, which would ultimately reduce the NREL's 1,600-person workforce in Colorado by 4 percent, were prompted by the Energy Department reducing and shifting funding for solar research, NREL spokesman George Douglas said.

Federal money for solar energy programs declined from $289.9 million in 2014 to $233 million this year. DOE has also shifted its focus to short-term research, Douglas said.

"Decisions were made to support programs with higher probability for success and more near-term applications," Douglas said (Alicia Wallace, *Denver Post*, Oct. 7). **-- BTP**

TRANSPORTATION:

Secretary rejects NTSB proposal to shift Metro oversight

Published: Friday, October 9, 2015

The U.S. transportation secretary yesterday rejected a proposal to shift federal oversight of the troubled Washington, D.C., Metrorail system.

Last week, National Transportation Safety Board Chairman Christopher Hart said Metro's oversight from the Federal Transit Administration has been inadequate and urged Transportation Secretary Anthony Foxx to put the system under the purview of the more powerful Federal Railroad Administration (*Greenwire*, Oct. 1).

Foxx "does not believe that the NTSB recommendation is either the wisest or fastest way to bring about the necessary safety improvements" at Metro, spokeswoman Suzanne Emmerling said. "While we have made similar findings of oversight and management deficiency in recent inspections and audits, we disagree with their recommendation."

The FRA largely oversees longer-distance freight and commuter trains, as opposed to the FTA's light-rail and subway system portfolio. Experts have said the FRA would have been ill-prepared to handle the Metro system.

"Subways have different operating characteristics than freight and commuter passenger rail," former deputy Transportation Secretary John Porcari said. "There are different train control systems and rolling stock, so there's not as much overlap as you might think" (Aratani/Duggan, *Washington Post*, Oct. 8). -- **BTP**

AIR POLLUTION:

4 automakers added to 'dieselgate' as police raid VW

Published: Friday, October 9, 2015

Four more companies were added to the list of automakers whose diesel vehicles emit significantly less pollution during emissions testing than on the road.

According to data obtained by the London *Guardian*, Mercedes-Benz, Honda Motor Co. Ltd., Mazda Motor Corp. and Mitsubishi Motors Corp. all produced significantly less nitrogen oxide in the laboratory than in more realistic driving conditions.

Last week, the U.K. newspaper said it found vehicles made by Groupe Renault, Nissan Motor Co. Ltd., Hyundai Motor Co., Citroën, Fiat, Volvo Group and Jeep also emitted more NOx while on the road.

Nick Molden, whose company Emissions Analytics tested the cars for the news outlet, said the industry has a "systemic" problem.

Greg Archer, an emissions expert at Transport & Environment, said the new results prove Volkswagen was the "tip of the iceberg."

"What we are seeing here is a dieselgate that covers many brands and many different car models," he said. "The only solution is a strict new test that takes place on the road and verified by an authority not paid by the car industry."

Mercedes-Benz, Honda, Mazda and Mitsubishi all said they test vehicles according to the law, but two --

Mercedes and Honda -- said they support more realistic testing (Damian Carrington, London *Guardian*, Oct. 9).

For the other automakers, no evidence was found of "defeat devices" like those used by Volkswagen AG, which is recalling 11 million vehicles.

German police raided Volkswagen headquarters in Wolfsburg yesterday for information on the employees responsible for cheating pollution tests.

The raid came as Michael Horn, U.S. head of Volkswagen, was pressed by lawmakers during a Capitol Hill hearing (*Greenwire*, Oct. 9).

Volkswagen said a "comprehensive collection of documents" was turned over to police to aid "a swift and complete resolution of the case" (Chapple/Thompson, CNN Money, Oct. 9). **-- DTB**

POLITICS:

E&E Daily's Bush talks impact of leadership uncertainty on energy legislation

Published: Friday, October 9, 2015

How will yesterday's decision by House Majority Leader Kevin McCarthy (R-Calif.) to drop out of the race for speaker affect the future of energy legislation in the House this fall? On today's The Cutting Edge, *E&E Daily* reporter Daniel Bush discusses the latest developments in the speakership race and explains how yesterday's news could affect votes on crude oil exports and other energy issues.

Click here to watch E&ETV's The Cutting Edge.

Monica Trauzzi: Welcome to The Cutting Edge. How will yesterday's House leadership stunner affect the future of key energy legislation? *E&E Daily*'s Dan Bush has been tracking all the latest developments from Capitol Hill. Dan, very surprising day yesterday. How does Kevin McCarthy's decision to not seek the speakership impact the level of order we can expect from the House this fall?

Daniel Bush: Right now it's fair to say the House is in complete disarray. There's a scramble on to find somebody who can step up and run for speaker successfully, but right now it's unclear that any member of the GOP caucus has the 218 votes that they would need to win a floor vote, and at the same time, Congress is facing several huge fiscal issues, from raising the debt limit on November 5th to avoiding another government shutdown on December 11th. So the prospects for this stuff is tricky.

Monica Trauzzi: So obviously the crude oil export bill has received a lot of attention and been a big focus throughout the fall, including from the White House, where we've heard indications from the president that he would veto any such bill. Despite leadership uncertainty, the House has moved forward on the crude oil export bill, but there was some controversy. What were the most controversial amendments there?

Daniel Bush: Sure, so there's an amendment fight between Democrats and Republicans over key provisions of the bill. Democrats have been asking for stipulations, restrictions on the crude oil export bill in order to get their support. Some have called for a year delay in implementing it. Frank Pallone, the -- sorry, the ranking member of the Energy and Commerce Committee, has put forward language that would require the president to sign off only if he determined that it didn't increase carbon emissions. So that's been the main fight, and Republicans have, so far, blocked Democratic amendments to the bill and appear, you know, eager to move forward with their version of the legislation.

Monica Trauzzi: So if this leadership uncertainty stretches beyond the end of October, what will the broader impacts be, then, on energy and the legislation that's trying to move through the House?

Daniel Bush: Sure. So the crude oil export ban bill is sort of one part of it, but there's been a broader debate over energy reform in general. There's a big package moving through the House right now. Fred Upton, the chairman of the Energy and Commerce Committee, had hoped to put that bill on the floor sometime this fall, but obviously the speaker's race has thrown a wrench into that, and it's unclear at this point when there's time in the calendar for them to get to that legislation. So clearly there's going to be delay. We don't know yet how long.

Monica Trauzzi: So there are a lot of names going in the ring right now for who the next speaker could be. How could that person, that one person really shape the future and the agenda that we see coming out of the House?

Daniel Bush: It's going to be very difficult. You mentioned that there are several people sort of in the mix. Paul Ryan, the chairman of the Ways and Means Committee, is being petitioned hard to get in. Somebody like him would have to unite the more moderate wing of the caucus with the Freedom Caucus in the Republican Party, the more conservative element. That's going to be very difficult to do, and it's going to affect, as you said, all sorts of legislation moving forward, and it's difficult at this point to see how the Republican Party in the near term can come together on these big energy and fiscal issues.

Monica Trauzzi: All right. Fascinating to watch. Thank you for coming on the show.

Daniel Bush: Thanks for having me.

Monica Trauzzi: More Cutting Edge coming next Friday. We'll see you then.

GRID:

Supreme Court to host high-stakes duel over energy rule

Robin Bravender, E&E reporter

Published: Monday, October 12, 2015

The Supreme Court will hear oral arguments Wednesday over a federal rule requiring that electricity providers give financial incentives to customers who slash power use in times of high energy demand.

The fight over the Federal Energy Regulatory Commission's demand-response rule will likely be the year's most important energy case.

"The stakes are really, really high," said David Goldberg, an attorney representing environmental groups that back the rule. "It's part and parcel to very important changes that have happened in energy regulation and energy provision, and is very, very important to the future of our nation's energy supply because this is a dynamic, flexible method."

At issue is a 2011 FERC regulation, Order No. 745, which requires grid operators to compensate electricity users for conserving power at peak times. Demand-response customers get paid the same rate for conservation as utilities get for selling electricity.

Grid operators and power providers -- represented by the Electric Power Supply Association (EPSA), American Public Power Association and others -- have told the courts that the rule sets an unfair compensation scheme and is illegal because it's beyond FERC's jurisdiction.

They contend that FERC's order effectively regulates retail electricity sales to businesses and residential customers that legally fall under states' jurisdiction. FERC, meanwhile, has authority over wholesale electricity sales -- when operators purchase electricity from power providers for resale to consumers.

"FERC's claim that it has authority to regulate reduced retail demand because it has invited 'demand response providers' into the wholesale markets merely describes FERC's power grab without justifying it," attorneys representing EPSA told the Supreme Court.

The U.S. Court of Appeals for the District of Columbia Circuit agreed with those challenging the rule, and tossed it out in a split decision last year (*Greenwire*, May 23, 2014).

Judge Janice Rogers Brown, writing for the majority, disputed FERC's contention that retail markets affect wholesale rates and that, therefore, the commission has jurisdiction.

Under that premise, she wrote, FERC's authority would be "almost limitless."

"Without boundaries, [FERC's interpretation] could ostensibly authorize FERC to regulate any number of areas, including the steel, fuel, and labor markets," she wrote.

FERC, meanwhile, argues the rule is legal. "Demand-response payments by wholesale-market operators expressly fall within FERC's" authority affecting wholesale rates, Solicitor General Donald Verrilli said in a brief to the Supreme Court.

"Those payments are made by wholesale-market operators in wholesale markets for the purpose of balancing wholesale supply and demand, setting wholesale prices at optimal levels, and enhancing the reliability of the interstate grid," he added.

Reporter Jeremy Jacobs contributed.

FEDERAL AGENCIES:

Report on 'invincible' boss didn't out whistleblowers -- DOE

Kevin Bogardus, E&E reporter

Published: Monday, October 12, 2015

The Department of Energy says its release of an investigative report on a DOE site office manager known for terrorizing subordinates didn't out individuals complaining about their boss.

In management comments obtained by *Greenwire* under the Freedom of Information Act, the Office of Science said great care was taken when processing a report that looked into the unnamed manager's conduct.

The document -- signed by Joseph McBrearty, deputy director of field operations for the DOE office -- says department lawyers worked diligently to redact the report, making it tough to know who said what about the manager in question.

"The Counsel's Office reported that the investigative report document had been thoroughly reviewed and that the subsequent redaction was approached in a very conservative manner, taking great care to ensure that it would be difficult to identify individuals," the response says.

The document also adds that "it was the professional opinion of the attorney who conducted the redaction that the redaction process was properly executed and that the redacted Investigative report did not include any inappropriate personnel information."

The management comments came in response to a once-hidden DOE inspector general report -- also uncovered by *Greenwire* via FOIA -- that detailed the misbehavior of the site office manager, whose name was redacted in the report. Thought "invincible" by underlings, the manager cursed at employees and opened their private email, among other transgressions (*Greenwire*, Sept. 4).

The Office of Science "generally" agreed with the IG's findings but took exception to its characterization of the investigative report's handling, saying it "incorrectly infers" DOE procedure wasn't properly followed.

The department watchdog considered those thoughts and made changes to its final report. The IG, however, emphasized that the investigative report's release to the manager helped create a hostile work environment at the site office.

"Our point all along has been that, despite Science's efforts to redact the investigative report, and as evidenced by the Manager's own statement, the release of this sensitive information to the Site Office Manager negatively impacted the work environment at the Site Office," said the IG, according to its own report.

DOE leaders releasing such information to the manager "may have compromised the integrity of the complaint process, placing these witnesses at risk for reprisal and retaliation," concluded the watchdog.

The manager believed the investigative report helped he or she to determine who was complaining at the site office. Despite the redactions, the manager's copy of the report still had the employees' names that were interviewed during the investigation.

"I have received the redacted version of the Report and although the areas of [sic] blacked out, I know who the negative comments came from because the style of communicating is something that I am quite familiar with since the same style has been used to communicate directly with me," the manager said in an email.

The manager's misconduct didn't result in any punishment from DOE. He or she has since retired, which means management couldn't take further action.

A DOE spokesman declined to comment for this story, saying the department doesn't comment on "personnel matters."

The management comments listing their objections to the IG report were not included in DOE's original response to *Greenwire*'s FOIA request. The Office of Science was responsible for the document and determined later to release it under the request.

Nevertheless, the management comments still have not been posted online yet along with its corresponding IG report. An IG spokeswoman said the document will be released soon on the web.

"We are coordinating with the Department regarding the management response. Based on the outcome of our coordination, our plan is to post the management response to our website," spokeswoman Felicia Jones said.

Reporter Hannah Northey contributed.

CLIMATE:

Bill would require CBO to report carbon impacts of legislation

Amanda Reilly, E&E reporter

Published: Monday, October 12, 2015

Rep. Jared Huffman (D-Calif.) on Friday reintroduced legislation that he said would provide transparency about the climate change impacts of bills and resolutions introduced in Congress.

Under the Huffman bill, the Congressional Budget Office would be required to calculate a carbon score for legislation and resolutions for which it also calculates financial impacts.

Huffman introduced the legislation Friday as the House passed legislation to overturn the 40-year-old ban on crude oil exports.

"Members of Congress already rely on fiscal impact estimates produced by the Congressional Budget Office to help make up their minds," Huffman said, "but we must also take into account the environmental consequences of our votes."

Huffman introduced the legislation last November, but the bill did not receive any votes. Sen. Bernie Sanders (I-Vt.) also last Congress unsuccessfully introduced the legislation in the upper chamber.

Democratic Reps. Mark Pocan of Wisconsin and Doris Matsui and Alan Lowenthal of California are original co-sponsors of the new bill in the House.

Called the "Carbon Pollution Transparency Act," the legislation would require that CBO undertake a carbon analysis of bills and resolutions in the same time frame that it releases financial analyses.

The carbon score would be based on the incremental change in carbon dioxide emissions brought on by introduced legislation. The director of CBO would be required to use "established best practices" to come up with the carbon impact.

"The American public has the right to know whether their representatives in Washington are voting to help or harm the environment," Huffman said, "and my bill would ensure we have a fair judge of each bill's environmental impact."

Huffman voted against the crude exports bill Friday, but he was successful in attaching an amendment to require the Department of Energy to report on the greenhouse gas impacts of listing the export ban (*Greenwire*, Oct. 9).

CAMPAIGN 2016:

Greens hope climate is part of the conversation in Dem debate

Jennifer Yachnin, E&E reporter

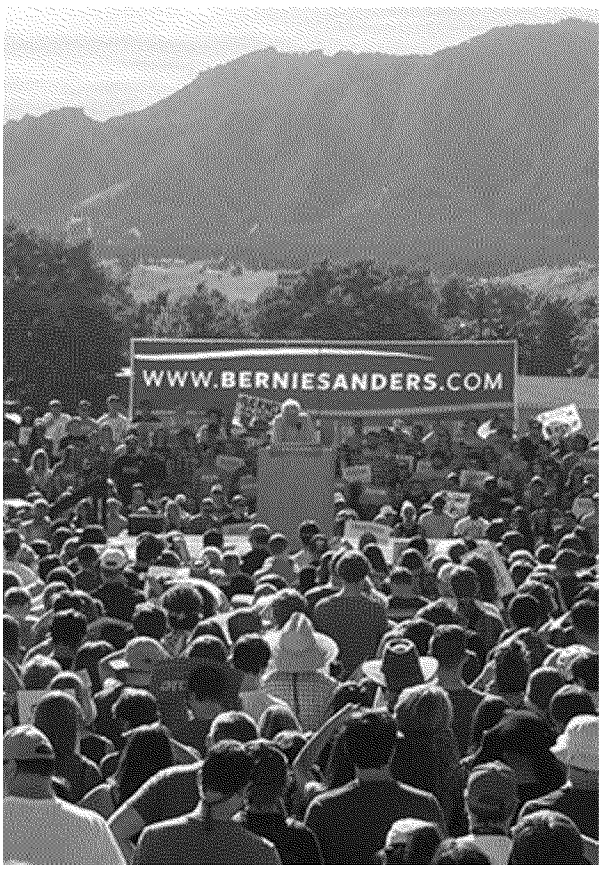
Published: Monday, October 12, 2015

BOULDER, Colo. -- During a nearly hourlong effort to rally Democratic primary voters here Saturday, Vermont Sen. Bernie Sanders (I) pitched his views on income inequality, immigration reform, rising college tuition and gun control.

"This is a people's campaign, and you brothers and sisters are part of a political revolution," Sanders said. "This is a campaign that is taking on the establishment at every level of society."

While the message hit home for many in the crowd -- college-age supporters made up a large portion of the several hundred people gathered on a grassy field underneath a blazing late autumn sun -- Sanders spent notably less time on another area: energy policy.

"There is nothing more important than leaving our planet healthy and habitable for our kids and our grandchildren," Sanders said nearly 45 minutes into his speech, sparking applause from the crowd. "The debate is over. The scientific community has spoken in a virtually unanimous voice: Climate change is real, it is caused by human activities, and it is already causing devastating problems on this planet."



Sen. Bernie Sanders at a rally Saturday in Boulder, Colo. Photo by Jennifer Yachnin.

Sanders, who has argued that U.S. EPA's Clean Power Plan could be more aggressive in its effort to

reduce carbon emissions, added that the nation has a "moral responsibility" to shift its energy system away from fossil fuels.

While the Vermont senator's remarks on energy policy Saturday -- which took less than minute -- hit on a number of priorities pushed by environmental activists, it also highlights an ongoing challenge for these groups in the Democratic and Republican presidential primary season: the often short shrift given to climate change policy in both the Republican and Democratic primaries to date.

While a handful of candidates have put a brief spotlight on energy and environmental policies -- former Florida Gov. Jeb Bush (R) vowed to roll back a series of EPA rules as part of a broader regulatory reform effort; former Maryland Gov. Martin O'Malley (D) has pledged a full shift to renewable energy as a key part of his platform; and former Secretary of State Hillary Clinton (D) made headlines for her opposition to the Keystone XL pipeline -- the subject has largely been skirted in a series of Republican forums and a pair of debates to date.

As Democratic presidential contenders prepare for their first debate this week, environmentalists including California billionaire Tom Steyer and the League of Conservation Voters have urged CNN to include the issue in its queries to candidates.

"Whoever ends up winning the nomination is going to have to continue President Obama's climate legacy -- the fate of our planet depends on it. So it's critical that we hear from the candidates just how they plan to combat the climate crisis and continue making the United States a global environmental leader," LCV wrote in an email to its members.

Much as it did with the CNN-sponsored Republican debate last month, the LCV will poll its members and then promote a single question to moderators related to climate change.

The Sierra Club said it will monitor whether Democratic contenders -- Sanders, O'Malley and Clinton, as well as former Rhode Island Gov. Lincoln Chafee and former Virginia Sen. Jim Webb -- address topics such as how each candidate would improve on the Clean Power Plan and how the United States should lead global efforts to address climate change.

"Look, action on the climate crisis and clean energy should be an issue the candidates and debate moderators discuss during every debate. There's very few things more important than the future of the planet," said Sierra Club Political Director Khalid Pitts.

But if the Democratic debate held in Nevada tomorrow does not address those issues, Steyer has called for another session that would solely address climate change and renewable energy ahead of the Iowa caucuses next year.

In a Sept. 25 memorandum, Steyer praised the Democratic field for addressing climate change but urged the candidates to offer greater detail about their plans.

"A crisis of this magnitude, with dire consequences for our economic and national security, requires a robust discussion from our leaders," Steyer said.

The National Wildlife Federation had planned to host a similarly themed event for Republican primary contenders last week but cancelled the Fitzwater Presidential Forum on Energy and the Environment after only three of the 14 candidates agreed to attend (*E&ENews PM*, Oct. 7).

The NWF will hold a similar event for Democratic primary contestants, but a date has yet to be finalized.

'He's our best choice'

As Sanders' campaign supporters awaited the senator's arrival here Saturday, many shielded themselves from the sun with campaign posters, and others passed the time playing numerous games of Frisbee.

Many of those in attendance at the rally cited the senator's proposal to make tuition free at state colleges and universities among their top reasons for backing the would-be Democratic presidential nominee. "I'm really excited to have a candidate that represents normal working people," said Denver resident Rachel Knapik, 37, who was dressed in a "Bernie for President" T-shirt and holding a matching campaign sign.

No one among two-dozen individuals polled by *Greenwire* -- including one man in a green-and-white T-shirt featuring the image of a wind turbine and the word "renewable energy" -- raised Sanders' statements on climate change or energy policy.

While dozens of attendees said they planned to support Sanders' bid, Louisville, Colo., resident Janelle Carlisle said she was at the event to help move her decisionmaking process along.

"I'm making up my mind, but I'm leaning in his direction," said Carlisle, who added that it's important for any would-be presidential nominee to be able to work with Congress and lamented poor relationship between Republican congressional leadership and Obama.

"Maybe with Bernie Sanders, who's been in the Senate a long time, he could use his connections to get things done," she said.

But Carlisle said she's open to switching allegiances should Vice President Joe Biden opt into the Democratic contest in the coming weeks.

"I would go with him 100 percent," she said.

Loveland, Colo., residents Sharon and John Steinman, however, said their support for Sanders is certain -- even if he loses the Democratic nomination.

"I'm looking for a candidate, and he's our best choice. He's got a good view for the future," said John Steinman, who vowed to "write in" Sanders' name on the general election ballot if necessary.

Sharon Steinman added: "We'll vote for him if he goes independent again."

Vermonter line resumes normal operation after rock slide

Sean Reilly, E&E reporter

Published: Monday, October 12, 2015

Amtrak begins the workweek with service on its Vermonter route back to normal operations, one week after a derailment blamed on a rock slide.

Trains on the line, which connect St. Albans in northern Vermont and Washington, D.C., began running their full routes on Friday and continued "very smoothly" throughout the weekend, Amtrak spokeswoman Chelsea Kopta confirmed this morning.

After the Oct. 5 mishap knocked a southbound train off the tracks, Amtrak substituted buses for stops north of Springfield, Mass. The derailment sent seven passengers and crew members to the hospital, although all were released the same day (*Greenwire*, Oct. 6).

While the cause is still under investigation by the National Transportation Safety Board, Vermont Gov. Peter Shumlin (D) said at a news conference last week that a rock ledge fell on the tracks.

"This was a freak of nature," Shumlin said.

ELECTRIC VEHICLES:

Competition for charging spots accompanies EV surge

Published: Monday, October 12, 2015

California is on the leading edge of cutting carbon emissions in the United States, but the surge in electric vehicles in the state has pushed people into conflict over a limited number of charging stations.

Electric vehicle drivers are now routinely seen unplugging one another's cars at public charging stations, and a quasi-black market for trading reserved spots has arisen in some places.

"It's high time for somebody to tackle the electric vehicle etiquette problem," said Maureen Blanc, director of Charge Across Town, a San Francisco-based nonprofit that is trying to help spread the adoption of electric vehicles.

California has about 15,000 official charging stations for its roughly 150,000 electric vehicles. Gov. Jerry Brown (D) has announced that he intends for the state to have 1.5 million electric cars on the road by 2025, with plans to sharply increase the number of charging stations (Matt Richtel, *New York Times*, Oct. 10). **-- BTP**

RAIL:

W.Va. oil train derailment preventable -- feds

Published: Monday, October 12, 2015

Federal investigators said Friday an oil train derailment that set a home and nearby area ablaze in southern West Virginia in February was preventable.

The Federal Railroad Administration fined CSX Corp. and its inspection contractor $25,000 each for failing to catch a rail defect before 27 of 109 cars in a CSX train went off the rails in Mount Carbon. The explosion and subsequent fire destroyed a home, injuring the owner, while 3 million gallons of North Dakota's oil field crude spilled, polluting the Kanawha River and a nearby creek.

During two inspections in the preceding months, a CSX contractor driving the rails in an truck outfitted with rail-reading technology found a potential problem but did not inspect more closely, incorrectly deeming the crack a surface flaw.

FRA chief safety officer Bob Lauby said speed and the Feb. 16 snowstorm were not factors, but the weight of previous trains likely expanded the crack. The agency is advising more detailed inspections and advanced training for inspectors as oil trains have derailed in flames in six states in recent years.

"Where we see a need for action in order to increase safety, we will not hesitate to take it," acting FRA Administrator Sarah Feinberg said. "It is increasingly clear that as limits are pushed on rail wear, there is cause for concern and need for action."

CSX has recovered more than 181,000 gallons of crude oil and agreed to a deal with U.S. EPA to clean up the area. More than 200 Fayette County residents sued CSX in September.

"Our country relies on the safe transportation of large quantities of energy products across the nation, and it is our responsibility to require operators to implement strict safety standards," Transportation Secretary Anthony Foxx said in a statement (AP/*Fuel Fix*, Oct. 9). **-- DTB**

AIR POLLUTION:

EPA to update 'exceptional events' rule soon

Amanda Reilly, E&E reporter

Published: Monday, October 12, 2015

U.S. EPA is poised to soon release a rule to update its "exceptional events" regulation that addresses air violations caused by events out of state control.

The agency sent a proposed rule to the White House for review Thursday, according to the Office of Management and Budget. EPA is aiming to release the proposal in the fall and take final action next year.

Under the exceptional events program, states can submit data to prove that high pollution readings are the result of wildfires, overseas emissions, ozone falling from the upper atmosphere and other events out of their control.

EPA has rarely used the program to excuse high readings of ground-level ozone, a key component of smog. The rule update comes after several states expressed concern that EPA's current program was not up to the task of dealing with a more stringent ozone standard.

Earlier this month, the agency tightened the national ambient air quality standard for ozone from 75 parts per billion, which was set in 2008 during the George W. Bush administration, to 70 ppb.

High-elevation sites in Western states at times approach that level due to background amounts of ozone in the air (*Greenwire*, Nov. 17, 2014). More than half of the states expressed concerns to EPA about background ozone as the agency considered a more stringent standard, according to a survey by the Association of Air Pollution Control Agencies (*Greenwire*, June 11).

Business and industry groups opposed to a tighter ozone standard also raised background ozone as a reason for EPA to retain the 75 ppb limit.

EPA acknowledged the concerns about background ozone in its final rule setting the new ozone standard and said that the exceptional events rule was a tool that states could use to address high background levels.

"EPA is in the process of updating that rule to simplify and expedite the process for air agency development and EPA review of these demonstrations," EPA said in a fact sheet released with the final ozone standard.

The agency said that changes to the rule would be finalized "well in advance" of any actions that states have to take to comply with the new ozone standard.

Along with making changes to the rules, EPA says that it will release guidance in the same time frame for how states should address wildfires that affect the amount of ozone in the air.

"The agency anticipates an increase in the number of fire-related exceptional events for a number of reasons," EPA said, "including an anticipated increased incidence of wildfires as a result of climate change."

1.LAW:

D.C. judge a formidable foe for Obama's environmental agenda

When Judge Brett Kavanaugh was picked for a federal court job by President George W. Bush, a Senate Democrat said the nomination was "not just a drop of salt in the partisan wounds, it is the whole shaker." Now viewed as a potential Supreme Court contender, Kavanaugh is again causing the left to fret with some recent opinions assailing U.S. EPA clean air rules.

Subject: VW Fraud

Greetings Mr. Grundler
I am contacting you to express my discontent with the VW emissions fraud.
While the agency has the ability to fine VW and mandate that they fix the cars in violation, this will do nothing to repair the harmful emissions that these vehicles have already produced. Therefore, I am asking for the EPA to require VW to not only fix the vehicles but to mandate that all future VW vehicles sold be required to exceed the mandated emissions (by the same amount
and same time) in which these vehicles installed with the defeat device were on the road and the amount
in % in which these vehicles did not comply with the law. This will be one of the few remedies in which VW
can make the community at large whole.

Thank you,
Tim Slonaker

Liz/Nick:

Amy and I wanted to follow up on some questions we're hoping you can help with as we do

reporting on VW.

1) Can you break down for us which of the VW diesel models are Generation 1, Generation 2 and Generation 3? Some detail beyond model years would be helpful, as I understand, for instance, that certain model-year Passats are Generation 2 but not Jettas. If you can tell us make, model and year for each generation, and tell us what differentiates each generation, that would be very helpful.

2) Could you walk us through or point us to the specific rules that require Volkswagen to explain the capabilities of auxiliary emissions control devices on the 2016 diesel models as part of the certification process? I understand they are obligated under EPA regulations to lay that all our for the agency. Perhaps you can point us to the specific rules or put us on the phone with someone who can help?

3) Has VW yet fulfilled its obligation to explain all the capabilities of the AECD on the 2016 diesel models? If not, has VW indicated when you can expect the full explanation?

Best,

Mike

To: Grundler, Christopher[grundler.christopher@epa.gov]
From: Ex. 6
Sent: Tue 10/13/2015 8:09:20 PM
Subject: VW hearing held before Congress

Hello Mr. Grundler. As a 2012 VW Jetta diesel owner, I read the transcripts from the hearing and was unimpressed by VW CEO Mr. Horn. If he truly desires to "make things right", then VW should buy the vehicles back from affected consumers. Period. As the EPA failed to catch even 1 vehicle out of 482,000 in seven years, I am asking the agency to protect the consumers now. The fixes proposed have the potential to damage fuel economy and/or performance. Further, it can take another year to "fix" them. Why should VW be allowed to pollute the air for another year with no repercussions all the while profiting from their lies in the form of monthly car payments? I am respectfully requesting the EPA mandate that VW buy the affected vehicles back immediately. Anything less is inherently unfair to the innocent people who simply bought a car under false pretenses. As the company has already demonstrated they will not do the right thing voluntarily, they should be pushed in that direction. Any help you can provide with this would be greatly appreciated.

Sincerely,

Subject: RE: WSJ questions on VW--NEED RESPONSES

Hi Nick,

Here are draft responses pending review by Erin, Julia, and Laura.

1) Can you break down for us which of the VW diesel models are Generation 1, Generation 2 and Generation 3? Some detail beyond model years would be helpful, as I understand, for instance, that certain model-year Passats are Generation 2 but not Jettas. If you can tell us make, model and year for each generation, and tell us what differentiates each generation, that would be very helpful.

Generation 3: all model year 2015 vehicles

Generation 2: 2012-2014 model year Passat

Generation 1: all 2009-2014 models (except Passat)

It would be better to contact Volkswagen for a detailed explanation of the technology differences between these vehicles.

2) Could you walk us through or point us to the specific rules that require Volkswagen to explain the capabilities of auxiliary emissions control devices on the 2016 diesel models as part of the certification process? I understand they are obligated under EPA regulations to lay that all our for the agency. Perhaps you can point us to the specific rules or put us on the phone with someone who can help?

Ex. 5

The regulations related to disclosing AECDs are listed in the Notice of Violation. Here is the appropriate excerpt.

To obtain a COC, a light-duty vehicle manufacturer must submit a COC application to the EPA for each test group of vehicles that it intends to enter into United States commerce. 40 C.F.R. § 86.1843-01. The COC application must include, among other things, a list of all auxiliary emission control devices (AECDs) installed on any applicable vehicles. 40 C.F.R. § 86.1844-01(d)(11). An AECD is "any element of design which senses temperature, vehicle speed, engine RPM, transmission gear, manifold vacuum, or any other parameter for the purpose of activating, modulating, delaying, or deactivating the operation of any part of the emission control system." 40 C.F.R. § 86.1803-01. The COC application must also include "a justification for each AECD, the parameters they sense and control, a detailed justification of each AECD that results in a reduction in effectiveness of the emission control system, and [a] rationale for why it is not a defeat device." 40 C.F.R. § 86.1844-01(d)(11).

Note: The NOV provided more detail about when AECD's are considered defeat devices under the Clean Air Act (see excerpts copied below from pages 2-3 of the September 18

NOV).

3) Has VW yet fulfilled its obligation to explain all the capabilities of the AECD on the 2016 diesel models? If not, has VW indicated when you can expect the full explanation?

Volkswagen has withdrawn their 2016 application for certification. Questions regarding when Volkswagen will have an updated application should be directed to Volkswagen.

Go bold on climate, governors and greens ask Dem candidates

By Kevin Rogers

Environmentalists and a group of Democratic governors are calling on the five Democratic presidential contenders to use tonight's debate to lay out specific plans to combat climate change and promote the expansion of clean energy.

As former Secretary of State Hillary Clinton, Vermont Sen. Bernie Sanders, former Maryland Gov. Martin O'Malley, former Virginia Sen. Jim Webb and former Rhode Island

Gov. Lincoln Chafee gathered in Las Vegas for the first debate of the 2016 cycle, several environmental groups were lobbying them — and the debate's moderators — to give climate change top billing.

In a joint statement released by the climate action advocacy group NextGen Climate, Washington Gov. Jay Inslee, Pennsylvania Gov. Tom Wolf, Delaware Gov. Jack Markell and Vermont Gov. Peter Shumlin said they were "on the frontlines in the fight against the impacts of climate change" and needed a candidate who would drive strong federal climate action. They argued that climate policy couldn't be a "footnote" in the party's 2016 platform.

"Climate change is an urgent threat to our country's economy, health, and communities — and as governors we don't have the luxury of ignoring this crisis," they said. "Individual states can't solve this issue alone — the magnitude of the climate crisis requires leadership at every level of government. Our next president must stand with governors across this country and take decisive action to cut carbon pollution and build America's clean energy future."

Tom Steyer, president of NextGen, told reporters on a call that Democrats would have a unique opportunity to make an economic case for clean energy development and climate action — something that Republican contenders haven't made. But he warned that Democrats would have to get specific.

"Seizing on this growth strategy is the ultimate opportunity for the Democratic party, especially this year," he said. "We're not looking for well-meaning intentions and concern at this point. We're actually looking for specific plans that explain how we're going to get there and how it's integrated into an entire program."

Advocates for the coal industry called on the candidates to lay out the economic impact of emissions-fighting regulations and compare the costs with the benefits.

NextGen has called on Democratic candidates to lay out a plan to remake the country's power portfolio so that half of U.S. energy consumption is from renewable power by 2030, and the country is powered entirely by renewables by 2050. The group has launched a print and video campaign to lobby the Democratic National Committee to schedule a separate debate focused on climate and energy issues.

The Sierra Club also laid out its wish list ahead of the debate, calling on candidates to vow to defend and strengthen the Obama administration's Clean Power Plan, uphold any agreement coming from December's United Nations climate negotiations, and to lay out a game plan for getting the U.S. on track toward 100-percent renewable energy.

"As the Democratic party chooses its next nominee for President, action on climate and climate-smart policies, advocacy for the booming clean energy economy, and ensuring we all have clean air to breathe and clean water to drink will be top priorities — and must be top topics of discussion," Political Director Khalid Pitts wrote in a blog post.

The group also urged Democrats to come out forcefully against the Keystone XL pipeline.

and Arctic drilling and to support public land conservation efforts.

The National Resources Defense Council Action Fund and the League of Conservation Voters have also launched online campaigns pressing Tuesday's moderators to make climate change a central part of the debate.

The candidates were being lobbied by the opposite side of the climate equation, too, with the American Coalition for Clean Coal Electricity, a coal industry group, calling on the Democrats to detail the potential economic impacts of the Clean Power Plan and justify their support for the Environmental Protection Agency regulations.

EPA's carbon rule sets a 2030 deadline for cutting power plant carbon emissions 32 percent below 2005 levels. All of the Democrats, with the exception of Webb, have gone on the record in support of the regulations. Webb's campaign did not return a request for comment.

"The debate presents an excellent opportunity for the candidates to explain why they are putting the President's political priorities ahead of everyday Americans' pocketbook priorities in this critical election," ACCCE spokeswoman Laura Sheehan said in a statement. "If they fly true to form, the Democratic candidates will be all but tripping over themselves to show their support for the President's costly climate agenda."

Upcoming Events

Massachusetts nuclear power plant to close by 2019

By Mark Pratt

BOSTON (AP) — The beleaguered Pilgrim Nuclear Power Station, the only nuclear power plant in Massachusetts, will close by June 2019 because it's becoming too expensive to run, its owner announced Tuesday.

The decision by New Orleans-based Entergy Corp. comes about a month after federal inspectors downgraded the plant's safety rating to the lowest level and said they would increase oversight in the wake of a shutdown during a winter storm. The owner maintained that the plant in Plymouth remained safe, although it needed millions of dollars in upgrades.

Entergy cited "poor market conditions, reduced revenues and increased operational costs." Bill Mohl, president of Entergy Wholesale Commodities, said the decision to close was a "decision of last resort" and "agonizing."

The plant, which went online in 1972, produces 680 megawatts of electricity, enough to power more than 600,000 homes. It was relicensed in 2012 for an additional 20 years and employs more than 600 people.

Ohio, West Virginia, Pennsylvania combine on gas drilling

By Julie Carr Smyth

COLUMBUS, Ohio (AP) — Ohio, West Virginia and Pennsylvania have agreed to cooperate in attracting shale gas development and jobs to their region over the next three years rather than compete with each other.

The states signed an agreement Tuesday during the Tri-State Shale Summit in Morgantown, West Virginia. They say they've agreed to coordinate marketing efforts, workforce development, investment strategies and academic research as they capitalize on Utica and Marcellus shale development "in an environmentally sound manner."

Shale gas has become available through the horizontal drilling practice commonly known as fracking.

Ohio Lt. Gov. Mary Taylor says challenges and opportunities surrounding the industry don't recognize state lines so collaboration is essential.

Shell drill vessels leave Arctic after oil exploration ends

By Dan Joling

ANCHORAGE, Alaska (AP) — Vessels used by Royal Dutch Shell PLC to drill for oil off Alaska have safely departed Arctic waters.

Shell announced Sept. 28 it would cease further exploration in the Chukchi and Beaufort seas after spending upward of $7 billion on Arctic offshore exploration.

The company cited disappointing results from an exploratory well drilled in the Chukchi and the unpredictable federal regulatory environment.

Shell experienced transit problems with vessels the last time it drilled off Alaska in 2012.

Scandal-hit VW to change diesel emissions technology

By David McHugh

FRANKFURT, Germany (AP) — Volkswagen's flagship brand plans to change its diesel technology in Europe and North America as well as develop new hybrid and electric vehicles in response to its emissions scandal.

The new steps were part of a plan to confront the company's scandal over cars that were equipped with computer software that let them evade U.S. emissions tests.

Volkswagen division head Herbert Diess said in a statement Tuesday the company would change its approach to diesel emissions in Europe and North America and adopt so-called selective catalytic converter technology, or SCR. That is a system that injects the chemical substance urea into the exhaust stream to neutralize harmful nitrogen oxides.

He said that change would come "as soon as possible."

White House: Iran missile test a likely UN violation

By The Associated Press

WASHINGTON (AP) — The White House says there are "strong indications" that Iran violated U.N. Security Council resolutions when it test fired a new ballistic missile.

White House press secretary Josh Earnest said Tuesday that such violations are nothing new.

Earnest says the Iranians have "almost serially" violated international concerns about the country's ballistic missile program.

But the White House spokesman added that those violations are "entirely separate" from the historic nuclear deal reached between Iran and world powers.

High court won't hear Utah appeal over road access

WASHINGTON (AP) — The Supreme Court won't hear an appeal from Utah officials

seeking rights of way over several roads that run through federal lands.

The justices on Tuesday let stand a lower court ruling that said Utah and Kane County could only claim rights to six of 12 routes over which they sought control.

The dispute is one of dozens of lawsuits the state and its counties have filed claiming title to more than 12,000 separate rights of way through federal lands. The contested routes range from graded dirt roads to dry stream beds.

State officials assert their rights under a Civil War-era law that allowed settlers to develop trails over public lands. Environmental groups say increased vehicle access would jeopardize animal habitats and degrade other environmentally sensitive areas.

Ex-coal CEO on trial talks safety in secretly recorded calls

By The Associated Press

CHARLESTON, W.Va. (AP) — Prosecutors are continuing to replay phone calls ex-Massey Energy CEO Don Blankenship secretly recorded in his office.

In recordings played in federal court Tuesday, Blankenship said he sometimes thought without federal mine regulators, "we'd blow ourselves up."

Blankenship is charged with conspiring to break mine safety laws and lying to financial regulators about safety practices at Upper Big Branch Mine in West Virginia, which exploded in 2010, killing 29 miners.

In the recordings, he also said he wanted to mention safety efforts in a news release after the explosion because it was "a chance to do some propaganda there."

And he said he wanted to keep an ex-Massey official's safety memo confidential because it would be a terrible document to resurface in a legal case if a fatal accident occurred.

Grijalva pushes creation of monument in far northern Arizona

By Felicia Fonseca

FLAGSTAFF, Ariz. (AP) — U.S. Rep. Raul Grijalva is reviving a push to designate a large swath of northern Arizona as a national monument.

Grijalva, a Democrat, said he would introduce legislation next week to create Greater Grand Canyon Heritage National Monument while acknowledging it likely won't get even a hearing

in Congress. The goal is to have a template ready that President Barack Obama could consider signing as a proclamation for a new monument, he said.

The proposed 1.7 million-acre monument is a mix of towering cliffs and canyons, grasslands, forest and desert that is popular with hunters, hikers, ranchers and other recreationists. It also includes 1 million acres rich in uranium ore that is temporarily banned from the filing of new mining claims. Grijalva, environmentalists and tribes want to make that ban permanent but have faced stiff opposition from Republicans and the mining industry.

Tribal leaders who joined Grijalva on Monday in a news conference said the creation of a monument would protect the area's water, sacred sites and other cultural resources.

China jails former oil executive for 20 years for corruption

By The Associated Press

BEIJING (AP) — A Chinese court sentenced a former senior executive of a state oil company on Tuesday to 20 years in prison after finding him guilty of corruption.

The sentencing of Wang Yongchun, former deputy general manager of China National Petroleum Corp., came a day after the company's former chairman, Jiang Jiemin, was given 16 years' imprisonment for corruption.

The Xiangyang Intermediate People's Court in central China said Wang received 49 million yuan ($7.9 million) in bribes between 2000 and 2013 and failed to explain the source of another 42 million yuan.

It said Wang — at Jiang's direction — provided assistance to others, causing huge losses to the state.

Go bold on climate, governors and greens ask Dem candidates

By Kevin Rogers

Environmentalists and a group of Democratic governors are calling on the five Democratic presidential contenders to use tonight's debate to lay out specific plans to combat climate change and promote the expansion of clean energy.

As former Secretary of State Hillary Clinton, Vermont Sen. Bernie Sanders, former Maryland Gov. Martin O'Malley, former Virginia Sen. Jim Webb and former Rhode Island

Gov. Lincoln Chafee gathered in Las Vegas for the first debate of the 2016 cycle, several environmental groups were lobbying them — and the debate's moderators — to give climate change top billing.

In a joint statement released by the climate action advocacy group NextGen Climate, Washington Gov. Jay Inslee, Pennsylvania Gov. Tom Wolf, Delaware Gov. Jack Markell and Vermont Gov. Peter Shumlin said they were "on the frontlines in the fight against the impacts of climate change" and needed a candidate who would drive strong federal climate action. They argued that climate policy couldn't be a "footnote" in the party's 2016 platform.

"Climate change is an urgent threat to our country's economy, health, and communities — and as governors we don't have the luxury of ignoring this crisis," they said. "Individual states can't solve this issue alone — the magnitude of the climate crisis requires leadership at every level of government. Our next president must stand with governors across this country and take decisive action to cut carbon pollution and build America's clean energy future."

Tom Steyer, president of NextGen, told reporters on a call that Democrats would have a unique opportunity to make an economic case for clean energy development and climate action — something that Republican contenders haven't made. But he warned that Democrats would have to get specific.

"Seizing on this growth strategy is the ultimate opportunity for the Democratic party, especially this year," he said. "We're not looking for well-meaning intentions and concern at this point. We're actually looking for specific plans that explain how we're going to get there and how it's integrated into an entire program."

Advocates for the coal industry called on the candidates to lay out the economic impact of emissions-fighting regulations and compare the costs with the benefits.

NextGen has called on Democratic candidates to lay out a plan to remake the country's power portfolio so that half of U.S. energy consumption is from renewable power by 2030, and the country is powered entirely by renewables by 2050. The group has launched a print and video campaign to lobby the Democratic National Committee to schedule a separate debate focused on climate and energy issues.

The Sierra Club also laid out its wish list ahead of the debate, calling on candidates to vow to defend and strengthen the Obama administration's Clean Power Plan, uphold any agreement coming from December's United Nations climate negotiations, and to lay out a game plan for getting the U.S. on track toward 100-percent renewable energy.

"As the Democratic party chooses its next nominee for President, action on climate and climate-smart policies, advocacy for the booming clean energy economy, and ensuring we all have clean air to breathe and clean water to drink will be top priorities — and must be top topics of discussion," Political Director Khalid Pitts wrote in a blog post.

The group also urged Democrats to come out forcefully against the Keystone XL pipeline.

and Arctic drilling and to support public land conservation efforts.

The National Resources Defense Council Action Fund and the League of Conservation Voters have also launched online campaigns pressing Tuesday's moderators to make climate change a central part of the debate.

The candidates were being lobbied by the opposite side of the climate equation, too, with the American Coalition for Clean Coal Electricity, a coal industry group, calling on the Democrats to detail the potential economic impacts of the Clean Power Plan and justify their support for the Environmental Protection Agency regulations.

EPA's carbon rule sets a 2030 deadline for cutting power plant carbon emissions 32 percent below 2005 levels. All of the Democrats, with the exception of Webb, have gone on the record in support of the regulations. Webb's campaign did not return a request for comment.

"The debate presents an excellent opportunity for the candidates to explain why they are putting the President's political priorities ahead of everyday Americans' pocketbook priorities in this critical election," ACCCE spokeswoman Laura Sheehan said in a statement. "If they fly true to form, the Democratic candidates will be all but tripping over themselves to show their support for the President's costly climate agenda."

Upcoming Events

Massachusetts nuclear power plant to close by 2019

By Mark Pratt

BOSTON (AP) — The beleaguered Pilgrim Nuclear Power Station, the only nuclear power plant in Massachusetts, will close by June 2019 because it's becoming too expensive to run, its owner announced Tuesday.

The decision by New Orleans-based Entergy Corp. comes about a month after federal inspectors downgraded the plant's safety rating to the lowest level and said they would increase oversight in the wake of a shutdown during a winter storm. The owner maintained that the plant in Plymouth remained safe, although it needed millions of dollars in upgrades.

Entergy cited "poor market conditions, reduced revenues and increased operational costs." Bill Mohl, president of Entergy Wholesale Commodities, said the decision to close was a "decision of last resort" and "agonizing."

The plant, which went online in 1972, produces 680 megawatts of electricity, enough to power more than 600,000 homes. It was relicensed in 2012 for an additional 20 years and employs more than 600 people.

Subject: TATD's Special All Hands meeting w/ Chris Grundler (Weds. 10/14 @ 11am)

Chris,

I think your calendar for tomorrow/Wednesday has you talking with the TATD Division at 11:00 for 30-45 minutes.

The Division meeting is in the Lab Conference Rooms A-B-C-D.

We discussed at the Fall SLT Retreat that the overarching objective was for you to meet with every OTAQ Division and provide a sort of "State-of-Office" OTAQ update.

If you would also highlight a couple of TATD specific items, I suggest …

•□□□□□□□ The HD Vehicle Technology Showcase will have just wrapped up. Please thank the TATD staff for its success

•□□□□□□□ The 4DX (4 Disciplines of Execution) Wildly Important Goals accomplished:

- Vehicle Testing operations, led by John and Maria, came through with huge increases in

vehicle test volumes by focusing on this metric

- Sterling's team in the Engine Testing Center more than doubled the number of cert engines tested in HD05 this past year

- Dan Barba's NCAT team, working with the ASD team, published seven peer-reviewed technical papers in 2015. I can't emphasize enough the importance of the testing and modeling work that's being done in NCAT to support the Light-Duty Midterm Evaluation and the HD GHG Phase 2 rulemaking. Their publications and presentations are helping to demonstrate OTAQ's technical leadership to industry and the American public.

- Erica's Immediate Office obligated $6M of FY14 funds by the second quarter, and over 50% of FY15 funds by the end of September

Last year, I told you in all sincerity that I was "blown away" by your progress with 4DX, and the enthusiasm you showed me.

- I look forward to your continued commitment to 4DX this year, and I've come to expect that I will be "blown away" once again.

Ex. 7

•□□□□□□□ I always mention to David my expectations that first and foremost is the importance of **Safety** in your performing work, and our reliance on the highest **Quality** in the tests you perform. We should always be vigilant in protecting our most important assets:

- you, the people here performing the work;

- the facility we need to conduct these important tests; and

- our reputation for fair, honest, and sound science & test data.

Thanks, David

Ann Arbor EPA lab tests other cars after VW scandal

Ann Arbor — The Environmental Protection Agency on Tuesday said it's begun testing other automakers' vehicles in the wake of Volkswagen AG's massive diesel-testing scandal. Some of those tests are being done at the agency's emissions testing lab in Ann Arbor.

Janet McCabe, assistant administrator of the EPA's office of air and radiation, said the agency is "upping our game" following VW's admission last month that it cheated on emissions tests for more than 11 million diesel cars worldwide. The EPA said late last month it would conduct more spot checks of light-duty cars and trucks, testing vehicles owned by individuals and rental companies in real-world driving conditions. The EPA also could take cars from manufacturers' assembly lines.

"We're focused on diesel right now, but ... we're becoming the unpredictable EPA, so we'll be testing a range of vehicles with a range of configurations and situations," McCabe told reporters at a Wednesday technology showcase event.

The EPA sent letters to automakers late last month, warning that it will take further steps to prevent fraud. New safeguards will "detect any kind of defeat devices" that might turn off pollution-control equipment, Chris Grundler, the head of the EPA's office of transportation and air quality, said. He called the new tests part of an "evolution" of enforcement.

McCabe declined to say if the agency discovered that any other automakers have used defeat devices. "When we finish that process we'll be able to talk about the results," she said.

The California Air Resources Board and Environment Canada also are conducting real-world vehicle emissions testing, and all three facilities plan to share the results.

McCabe said the EPA isn't necessarily looking at software that could potentially trigger the defeat devices, which VW used to evade tests on its diesel vehicles.

"Our focus is on what's coming out of the tailpipe, which is how our standards are set and what the cars

need to be measured up against," she said. "What we're focused on is whether they meet the standards that are in our rules."

McCabe was in Ann Arbor Wednesday to celebrate the launch of the EPA's new heavy-duty truck chassis dynamometer, a $3 million piece of equipment built in Germany that allows the agency to perform emissions tests on full-size heavy-duty trucks. Previously, the EPA had to spend about a week removing truck engines to run the tests.

The new dynamometer is housed in part of the agency's 200,000-square-foot National Vehicle & Fuel Emissions lab in Ann Arbor. The lab includes a number of emissions testing rooms that run simulations on cars, trucks and even small equipment like lawn mowers in a wide range of climates and conditions.

Subject: VW hearing held before Congress

Hello Mr. Grundler. As a 2012 VW Jetta diesel owner, I read the transcripts from the hearing and was unimpressed by VW CEO Mr. Horn. If he truly desires to "make things right", then VW should buy the vehicles back from affected consumers. Period. As the EPA failed to catch even 1 vehicle out of 482,000 in seven years, I am asking the agency to protect the consumers now. The fixes proposed have the potential to damage fuel economy and/or performance. Further, it can take another year to "fix" them. Why should VW be allowed to pollute the air for another year with no repercussions all the while profiting from their lies in the form of monthly car payments? I am respectfully requesting the EPA mandate that VW buy the affected vehicles back immediately. Anything less is inherently unfair to the innocent people who simply bought a car under false pretenses. As the company has already demonstrated they will not do the right thing voluntarily, they should be pushed in that direction. Any help you can provide with this would be greatly appreciated.

Sincerely,

Sarah B. Black, Esq.

Carbon Plan Will Force New Collaboration, State Leader Says

State environmental agencies and public utility commissions, accustomed to operating within their own spheres of influence, must learn to work together to meet Clean Power Plan compliance deadlines that loom just a year away, the new head of the Environmental Council of the States told Law360.

JPML Won't Centralize EPA, Corps Water Rule Challenges

The U.S. Judicial Panel on Multidistrict Litigation on Tuesday denied the U.S. Environmental Protection Agency and the Army Corps of Engineers' bid to centralize several challenges to the controversial Clean Water Rule, finding the request would "not serve the convenience of the parties and witnesses."

Colo. Tribe, DOI Near Settlement Over Fracking Rules

The Southern Ute Indian Tribe is nearing a settlement with the federal government over the latter's controversial new hydraulic fracturing regulations on federal and tribal lands, according to a joint motion filed in a Colorado federal court requesting a stay of the litigation.

Enviros Look To Nix $7M Duke Energy Coal Ash Penalty

Environmental groups on Tuesday took aim at the North Carolina Department of Environmental Quality's $7 million civil penalty against Duke Energy Corp. over groundwater contamination at its coal ash facilities, moving to overturn an action they criticized as a "sweetheart settlement."

EPA Defends Coal Mine Permit Revocation

The U.S. Environmental Protection Agency has asked the D.C. Circuit to dismiss a challenge to a Washington, D.C., federal judge's decision upholding the EPA's revocation of a permit for an Arch Coal unit's Appalachian mountaintop coal mine.

5 Surefire Ways To Lose A Client

It can be easy for lawyers to assume they have built lasting relationships with longtime clients, but experts say attorneys need to watch out for common missteps that are sure to leave clients shopping for new counsel. Here, we look at five things that will make your clients want to cut ties for good.

Dewey Jury Nears Breaking Point As Mistrial Looms

The unusually long deliberations in the Dewey & LeBoeuf LLP fraud trial are putting a mental and physical strain on jurors and could force a New York state judge to either declare a mistrial or take the rare step of substituting an alternate in a last-ditch attempt to break the deadlock.

Dewey Judge Denies Mistrial Bid As Execs Beat More Charges

A New York State judge refused to declare a mistrial Tuesday in the Dewey & LeBoeuf LLP fraud case after jurors acquitted the firm's former leaders of nine additional counts of falsifying books and records and said they were deadlocked on the remaining charges.

GCs Aren't Ready To Break Up With BigLaw

Corporate law departments continue to pull work in-house and bargain hard on law firm fees, according to an industry expert at HBR Consulting and a recent survey, but they're not ready to pull the plug on BigLaw just yet.

9-To-5 In-House Workweek Becomes A Myth

That 9-to-5 fantasy of in-house life is fading fast: The Association of Corporate Counsel reports that in-house workweeks average about 49 hours worldwide, and nearly half of in-house counsels say their workload is increasing.

Female GCs Still Bagging Smaller Paychecks

There's good news and bad news for women in the legal department, who now account for nearly half of in-house positions but still earn less and hold titles of lower prestige, according to a new survey.

BigLaw Bosses See Client Discounts Leveling Off

BigLaw managers are increasingly confident that they can find some relief from downward pricing pressure, according to Citi Private Bank Law Firm Group's survey Tuesday.

While California's Clean Energy and Pollution Reduction Act does not directly target reduction in petroleum usage, some decrease in use will likely be inevitable to meet the law's greenhouse gas emission goals, and we expect that the issue of reducing petroleum consumption will likely resurface in 2016, say attorneys at Reed Smith LLP.

Volkswagen Scandal Is Perfect For A Damages Class Action

Unless a class is rapidly certified and class counsel enabled to advocate for all owners' and lessees' united interest in receiving direct compensation from Volkswagen AG, the company may attempt to foreclose owners' rights through deals with regulators that lack an independent representative of the owners, say Adam Levitt and Edmund Aronowitz of Grant & Eisenhofer PA.

5 Surefire Ways To Lose A Client

It can be easy for lawyers to assume they have built lasting relationships with longtime clients, but experts say attorneys need to watch out for common missteps that are sure to leave clients shopping for new counsel. Here, we look at five things that will make your clients want to cut ties for good.

Dewey Jury Nears Breaking Point As Mistrial Looms

The unusually long deliberations in the Dewey & LeBoeuf LLP fraud trial are putting a mental and physical strain on jurors and could force a New York state judge to either declare a mistrial or take the rare step of substituting an alternate in a last-ditch attempt to break the deadlock.

Dewey Judge Denies Mistrial Bid As Execs Beat More Charges

A New York State judge refused to declare a mistrial Tuesday in the Dewey & LeBoeuf LLP fraud case after jurors acquitted the firm's former leaders of nine additional counts of falsifying books and records and said they were deadlocked on the remaining charges.

GCs Aren't Ready To Break Up With BigLaw

Corporate law departments continue to pull work in-house and bargain hard on law firm fees, according to an industry expert at HBR Consulting and a recent survey, but they're not ready to pull the plug on BigLaw just yet.

9-To-5 In-House Workweek Becomes A Myth

That 9-to-5 fantasy of in-house life is fading fast: The Association of Corporate Counsel reports that in-house workweeks average about 49 hours worldwide, and nearly half of in-house counsels say their workload is increasing.

Female GCs Still Bagging Smaller Paychecks

There's good news and bad news for women in the legal department, who now account for nearly half of in-house positions but still earn less and hold titles of lower prestige, according to a new survey.

BigLaw Bosses See Client Discounts Leveling Off

BigLaw managers are increasingly confident that they can find some relief from downward pricing pressure, according to Citi Private Bank Law Firm Group's survey Tuesday.

Wilson Sonsini Partner Tapped For Del. Chancery Seat

Delaware Gov. Jack Markell tapped Wilson Sonsini Goodrich & Rosati PC partner Tamika Montgomery-Reeves on Tuesday as a vice chancellor on the First State's venerable

Germany's DEA buying E.ON Norway oil, gas business for $1.6B

By The Associated Press

BERLIN (AP) — German-based oil and gas firm DEA Deutsche Erdoel AG says it plans to buy utility E.ON's Norwegian oil and gas business in a deal worth $1.6 billion.

DEA, a former unit of energy company RWE that now belongs to an international investment arm of Russian billionaire Mikhail Fridman's Alfa Group, said Wednesday that the deal will more than double its current production in Norway. It is subject to approval by Norwegian

authorities and the European Commission.

DEA supervisory board chairman Lord Browne said the planned acquisition is the first step in the company's new growth strategy. He said that it "has access to substantial financial resources" and he expects it to make more investments in the Norwegian continental shelf and other core areas.

2016 Democrats make case for climate action, press for global approach

By Kevin Rogers

While energy issues and climate change were largely on the back burner for much of the first Democratic presidential debate, all five candidates made a case for combating climate change—with some highlighting the necessity of a global approach to the issue.

Former Secretary of State Hillary Clinton, for example, touted her role in bringing China and India to the table on cutting carbon emissions at the 2009 United Nations Copenhagen Conference.

While the conference didn't result in legally binding cuts and was viewed by many climate activists as a failure, Clinton argued that it laid the groundwork for last year's bilateral agreement with China, where the country pledged to peak its carbon emissions by 2030.

She did, however, note that the agreement wouldn't be enough unless world leaders reached a strong, legally binding deal to cut carbon emissions at December's United Nations climate talks in Paris.

"I do think that the bilateral agreement that President Obama made with the Chinese was significant," she said. "Now, it needs to go further, and there will be an international meeting at the end of this year, and we must get verifiable commitments to fight climate change from every country gathered there."

Former Virginia Sen. Jim Webb also voiced the need for a global approach to address the

issue, arguing that "we are not going to solve climate change simply with the laws here."

"We've done a good job in this country since 1970. If you look at China and India, they're the greatest polluters in the world," he said. "The so-called agreements that we have had with China are illusory in terms of the immediate requirements of the Chinese government itself," he said.

Former Maryland Gov. Martin O'Malley, painting climate change as a security problem, said it "makes cascading threats even worse."

Vermont Sen. Bernie Sanders, an independent seeking the nomination, termed it the greatest national security threat.

"The scientific community is telling us that if we do not address the global crisis of climate change, transform our energy system away from fossil fuel to sustainable energy, the planet that we're going to be leaving our kids and our grandchildren may well not be habitable," he said. "That is a major crisis."

Sanders also said to achieve meaningful climate action, the U.S. must be "extremely aggressive in working with China, India, (and) Russia."

While the candidates largely avoided direct confrontation on energy issues, O'Malley did jab at Clinton for her late decision to oppose the Keystone XL pipeline. Clinton had demurred on the question for several weeks over summer before coming out last month against the project, which would carry Canadian oil sands to Gulf Coast refineries.

"Secretary Clinton's campaign put out a lot of reversals on positions on Keystone and many other things," O'Malley said.

Clinton denied that she reversed on the oil sands project, saying that she "never took a position on Keystone until I took a position on Keystone."

The candidates, with the exception of Webb, highlighted the need for policy changes to reduce fossil fuel use in favor of cleaner energies.

Webb defended his record of supporting coal-fired power, nuclear energy, Keystone XL and offshore drilling as being an "all-of-the-above energy voter."

But O'Malley contended that the "all-of-the-above" framework would be a hindrance going forward, as he pledged to put the U.S. on track for a 100-percent renewable grid by 2050, through executive actions and pressing for renewable energy investor tax credits.

"We did not land a man on the moon with an all-of-the-above strategy," he said. "It was an intentional engineering challenge, and we solved it as a nation. And our nation must solve this one."

Former Rhode Island Gov. Lincoln Chafee touted his battles with the coal lobby in pressing climate change policies.

Sanders, meanwhile, highlighted his support for putting a price on carbon emissions and called for campaign finance reform to prevent fossil fuel industries from "funding the Republican party, which denies the reality of climate change."

Toyota aims to nearly eliminate gasoline cars by 2050

By Yuri Kageyama

TOKYO (AP) — Toyota, under ambitious environmental targets, is aiming to sell hardly any regular gasoline vehicles by 2050, only hybrids and fuel cells, to radically reduce emissions.

The automaker promised to involve governments, affiliated companies and other "stakeholders" in its push to reduce average emissions from Toyota cars by 90 percent by about 2050, compared with 2010 levels.

Electric cars weren't part of their vision, outlined by top Toyota Motor Corp. officials at a Tokyo museum on Wednesday, striking a contrast with rivals such as Nissan Motor Co., which has banked on that zero-emissions technology.

Toyota's commitments come at a time when the auto industry has been shaken by a scandal at Germany's Volkswagen AG, in which it admitted it cheated on diesel emissions tests covering millions of cars.

Lawyer for victims' kin vows to sue railroad over derailment

By The Associated Press

PORTLAND, Maine (AP) — A lawyer for relatives of most of the 47 people killed in an oil train derailment in Canada described a Canadian railroad's refusal to contribute to a settlement fund as "reprehensible" and vowed to pursue a lawsuit.

Canadian Pacific contends it bears no responsibility for the fiery disaster in Lac Megantic, Quebec, in 2013 and puts the blame squarely on the railroad whose runaway train derailed.

But attorney Peter Flowers, who's based in Chicago, said on Tuesday that Canadian Pacific knew the crude oil from North Dakota's Bakken region was unstable before handing it off to

another railroad, which he described as "incompetent."

"They acted horribly without regard for the welfare of human beings, and we're going to hold them responsible for what they did in front of a jury of 12 people in the state of Illinois," he said.

More

CSX delivers relatively flat 3Q profit despite volume dip

By Josh Funk

OMAHA, Neb. (AP) — Tight cost controls helped CSX Corp. deliver relatively flat third-quarter profit even though the railroad hauled 3 percent less freight and continued facing weak coal demand.

The Jacksonville, Florida-based company said Tuesday it earned $507 million, or 52 cents per share. That's roughly in line with last year's $509 million, or 51 cents per share.

The railroad's profit exceeded the 50 cents per share analysts surveyed by Zacks Investment Research, but its $2.94 billion revenue fell short of the $3.04 billion revenue Wall Street expected.

CSX affirmed its prediction for 2015 profit growth in the mid-single digits despite the ongoing coal weakness and the overall decline in volume.

Massive wildfire rehabilitation underway in Idaho, Oregon

By Keith Ridler

BOISE, Idaho (AP) — A federal plan to rehabilitate 436 square miles of scorched rangeland in southwestern Idaho and eastern Oregon containing important sage grouse habitat and grazing land for ranchers calls for spending about $67 million over 5 years.

The U.S. Bureau of Land Management released the 71-page plan late last week that includes massive plantings of grasses, several types of flowering plants known as forbs, and shrubs, with more than $26 million being spent on seeds and seed planting.

The effort follows the U.S. Fish and Wildlife Service's decision last month that sage grouse don't need protection under the Endangered Species Act because of conservation efforts

taking place in multiple states.

"They're really under the gun to do this because it's pretty complex because of the different (land) ownership and the different types of soil," said John Freemuth, a Boise State University professor and public lands expert. "We all know that Fish and Wildlife is going to revisit the sage grouse issue in five years."

New Hampshire oyster project: Cooperation on the half shell

By Holly Ramer

DURHAM, N.H. (AP) — From seeding to slurping, what gets served on the half shell is not even half the story when it comes to New Hampshire oysters.

A major effort is underway here and elsewhere along the East Coast to restore the natural oyster population, which has plummeted in recent decades due to disease, over-harvesting and other problems. Led by the University of New Hampshire, the project brings together numerous partners ranging from restaurants that recycle discarded oyster shells to volunteer "foster parents" who raise baby oysters until they're big enough to survive on their own.

"We had this one shell that had four nice oysters on it. Each time we'd pull them up, we'd go, 'Oh, there he is! There's our star!'" said Lynn Badger of Newmarket, who like any good grandma keeps pictures of her baby oysters on her phone. "So it's kind of fun to see them, even though it's really hard to discern one from another."

Badger and her husband are part of a complicated process that starts with constructing new reefs out of clamshells and other material from a seafood processing plant in Rhode Island. Microscopic oyster larvae are purchased from Maine and placed in special tanks at UNH's Jackson Estuarine Lab, where the spat — young oysters — attach themselves to shells discarded from area restaurants.

2016 Democrats make case for climate action, press for global approach

By Kevin Rogers

While energy issues and climate change were largely on the back burner for much of the first Democratic presidential debate, all five candidates made a case for combating climate change – with some highlighting the necessity of a global approach to the issue.

Former Secretary of State Hillary Clinton, for example, touted her role in bringing China and India to the table on cutting carbon emissions at the 2009 United Nations Copenhagen

Conference.

While the conference didn't result in legally binding cuts and was viewed by many climate activists as a failure, Clinton argued that it laid the groundwork for last year's bilateral agreement with China, where the country pledged to peak its carbon emissions by 2030.

She did, however, note that the agreement wouldn't be enough unless world leaders reached a strong, legally binding deal to cut carbon emissions at December's United Nations climate talks in Paris.

"I do think that the bilateral agreement that President Obama made with the Chinese was significant," she said. "Now, it needs to go further, and there will be an international meeting at the end of this year, and we must get verifiable commitments to fight climate change from every country gathered there."

Former Virginia Sen. Jim Webb also voiced the need for a global approach to address the issue, arguing that "we are not going to solve climate change simply with the laws here."

"We've done a good job in this country since 1970. If you look at China and India, they're the greatest polluters in the world," he said. "The so-called agreements that we have had with China are illusory in terms of the immediate requirements of the Chinese government itself," he said.

Former Maryland Gov. Martin O'Malley, painting climate change as a security problem, said it "makes cascading threats even worse."

Vermont Sen. Bernie Sanders, an independent seeking the nomination, termed it the greatest national security threat.

"The scientific community is telling us that if we do not address the global crisis of climate change, transform our energy system away from fossil fuel to sustainable energy, the planet that we're going to be leaving our kids and our grandchildren may well not be habitable," he said. "That is a major crisis."

Sanders also said to achieve meaningful climate action, the U.S. must be "extremely aggressive in working with China, India, (and) Russia."

While the candidates largely avoided direct confrontation on energy issues, O'Malley did jab at Clinton for her late decision to oppose the Keystone XL pipeline. Clinton had demurred on the question for several weeks over summer before coming out last month against the project, which would carry Canadian oil sands to Gulf Coast refineries.

"Secretary Clinton's campaign put out a lot of reversals on positions on Keystone and many other things," O'Malley said.

Clinton denied that she reversed on the oil sands project, saying that she "never took a

position on Keystone until I took a position on Keystone."

The candidates, with the exception of Webb, highlighted the need for policy changes to reduce fossil fuel use in favor of cleaner energies.

Webb defended his record of supporting coal-fired power, nuclear energy, Keystone XL and offshore drilling as being an "all-of-the-above energy voter."

But O'Malley contended that the "all-of-the-above" framework would be a hindrance going forward, as he pledged to put the U.S. on track for a 100-percent renewable grid by 2050, through executive actions and pressing for renewable energy investor tax credits.

"We did not land a man on the moon with an all-of-the-above strategy," he said. "It was an intentional engineering challenge, and we solved it as a nation. And our nation must solve this one."

Former Rhode Island Gov. Lincoln Chafee touted his battles with the coal lobby in pressing climate change policies.

Sanders, meanwhile, highlighted his support for putting a price on carbon emissions and called for campaign finance reform to prevent fossil fuel industries from "funding the Republican party, which denies the reality of climate change."

'Report card' gives Mississippi River basin a D+

By Jim Slater

ST. LOUIS (AP) — A report card is out on the Mississippi River basin, and the grade is not good: a D+, with the river's aging transportation infrastructure topping the list of concerns.

The report by America's Watershed Initiative assesses categories such as the abundance of clean water, flood control and risk, ecosystem health, the economy and recreation on the river and its watershed, which touches parts of 31 states and covers two-fifths of the continental U.S.

The category of biggest concern is the condition of infrastructure such as locks and dams, creating what initiative members call a threat to the nation's economy.

"Our aging water infrastructure desperately weakens America's capability to reliably and efficiently move and export food and goods," said Stephen Gambrell, director of the Mississippi River Commission and a member of the initiative's steering committee.

By Holly Ramer

DURHAM, N.H. (AP) — From seeding to slurping, what gets served on the half shell is not even half the story when it comes to New Hampshire oysters.

A major effort is underway here and elsewhere along the East Coast to restore the natural oyster population, which has plummeted in recent decades due to disease, over-harvesting and other problems. Led by the University of New Hampshire, the project brings together numerous partners ranging from restaurants that recycle discarded oyster shells to volunteer "foster parents" who raise baby oysters until they're big enough to survive on their own.

"We had this one shell that had four nice oysters on it. Each time we'd pull them up, we'd go, 'Oh, there he is! There's our star!'" said Lynn Badger of Newmarket, who like any good grandma keeps pictures of her baby oysters on her phone. "So it's kind of fun to see them, even though it's really hard to discern one from another."

Badger and her husband are part of a complicated process that starts with constructing new reefs out of clamshells and other material from a seafood processing plant in Rhode Island. Microscopic oyster larvae are purchased from Maine and placed in special tanks at UNH's Jackson Estuarine Lab, where the spat — young oysters — attach themselves to shells discarded from area restaurants.

Germany's DEA buying E.ON Norway oil, gas business for $1.6B

By The Associated Press

BERLIN (AP) — German-based oil and gas firm DEA Deutsche Erdoel AG says it plans to buy utility E.ON's Norwegian oil and gas business in a deal worth $1.6 billion.

DEA, a former unit of energy company RWE that now belongs to an international investment arm of Russian billionaire Mikhail Fridman's Alfa Group, said Wednesday that the deal will more than double its current production in Norway. It is subject to approval by Norwegian authorities and the European Commission.

DEA supervisory board chairman Lord Browne said the planned acquisition is the first step in the company's new growth strategy. He said that it "has access to substantial financial resources" and he expects it to make more investments in the Norwegian continental shelf and other core areas.

Oil Sands Boom Dries Up in Alberta, Taking Thousands of Jobs With it

By IAN AUSTEN, New York Times • • Posted October 14, 2015

At a camp for oil workers here, a collection of 16 three-story buildings that once housed 2,000 workers sits empty. A parking lot at a neighboring camp is now dotted with abandoned cars. With oil prices falling precipitously, capital-intensive projects rooted in the heavy crude mined from Alberta's oil sands are losing money, contributing to the loss of about 35,000 energy industry jobs across the province.

Op-Ed: VW Scandal Reveals Major Cracks in EPA's Emissions Reduction Strategy

By Carol Werner, Morning Consult • • Posted October 14, 2015

Volkswagen's installation of emissions testing "defeat devices" in its diesel cars was decidedly illegal, and the company should be severely punished for flouting our pollution controls in such an egregious manner. But its cheating is merely the proverbial tip of the emissions iceberg. While the largest and most deceptive greenwashing scam in recent memory, it's just one more example of EPA's failed regulatory oversight approach over car emissions. EPA's emissions testing is like Swiss cheese, with holes big enough to drive a car through. [read more …]

California governor signs bill correcting tax problem for biodiesel

By Biofuels Digest • • Posted October 14, 2015

California Gov. Jerry Brown signed AB 1032 into law, correcting a tax problem and clearing the way for a significant increase in the volumes of biodiesel blended in the state. The bill, introduced by Assembly Member Rudy Salas and sponsored by the California Biodiesel Alliance, amended Section 60501 of the Revenue and Taxation Code by adding biodiesel to the law allowing for refunds on nontaxable fuel. Gov. Cuomo aims to link U.S. Northeast's carbon market with Calif.'s

Elizabeth Harball, E&E reporter • • Posted October 14, 2015

In a release made public after the remarks, the governor's office added that the administration will pursue a linkage between the Regional Greenhouse Gas Initiative (RGGI), a cap-and-trade system that involves eight other Northeastern states, and California's carbon market, which is also linked to the Canadian provinces of Quebec and Ontario. "Connecting these markets would be more cost-effective and stable, thereby supporting clean energy and driving international carbon emission reductions," the release stated. "New York State will also engage other states and provinces to build a broader carbon market and further drive an international discussion that encourages government action on carbon emissions." [read more …]

Ex-Sen. Talent revs up fight over whether ethanol must be added to fuel

By Deirdre Shesgreen, Springfield News-Leader • • Posted October 14, 2015

Former Missouri Sen. Jim Talent has joined a pitched battle to protect the ethanol industry from a two-pronged political attack in Washington, a showdown that pits Show-Me State farmers against an array of powerful interest groups. At issue are federal rules requiring ethanol and other alternative fuels to be added to America's gasoline supply, which has been a boon to corn farmers in Missouri and other Midwestern states. But the ethanol mandates, which are supposed to increase every year under a 2005 law that Talent helped craft, are a bane to the oil industry, which is committed to killing the requirements. Environmentalists Sue EPA Over Missing PM2.5 SIPs

Environmentalists are suing EPA over its alleged failure to ensure submission of adequate state implementation plans (SIPs) for meeting the agency's 2006 fine particulate matter (PM2.5) national ambient air quality standard (NAAQS), aiming to force issuance of the emission reduction plans for five Western states.

Greenwire

LAW:

D.C. judge a formidable foe for Obama's environmental agenda

Robin Bravender, E&E reporter

Published: Tuesday, October 13, 2015

A Republican operative-turned federal judge has emerged as one of the most powerful critics of President Obama's environmental rules.

Judge Brett Kavanaugh -- a 50-year-old George W. Bush administration appointee to the U.S. Court of Appeals for the District of Columbia Circuit -- has pounded the administration in a series of legal opinions rebuffing some of its most high-profile air pollution rules. And because he's widely seen as an influential voice with Supreme Court justices and a leading contender for a GOP nomination to the high court, Kavanaugh's legal moves are being closely watched by those on both sides of the environmental debate.

Given Kavanaugh's "track record in these important cases over the last few years, I would think him a judge that is more open to second-guessing the EPA than nearly anyone," said Tom Donnelly, counsel at the left-leaning Constitutional Accountability Center.

Kavanaugh "happened to be on a bunch of big environmental cases, and he's written separately in several of them and the Supreme Court paid attention," said Jonathan Adler, a law professor at Case Western Reserve University who previously clerked on the D.C. Circuit.

With the fate of nearly every major environmental rule hinging on the outcome of lawsuits that could drag out for years, Kavanaugh could play a major role in determining which policies survive. And his take on environmental law will become even more relevant should he ultimately secure a seat on the high court.

Most recently, Kavanaugh has been central to a high-stakes battle surrounding which judges will hear challenges to U.S. EPA's landmark greenhouse gas standards for power plants.

In a lucky draw for those looking to pre-emptively challenge the draft rule, three GOP-appointed judges (including Kavanaugh) were selected for the panel picked to hear their arguments. Those judges said the challenge was premature, but that didn't stop EPA's opponents from making some interesting procedural maneuvers in an attempt to secure Kavanaugh and the other two judges on the panel that will ultimately hear challenges to the final rule.

So far, the judges have denied the attempts by states and industry to maintain that panel, but the unusual legal maneuvering is a clear indication that EPA's challengers see those judges as a favorable audience in what promises to be a broad legal assault against the administration's signature climate change rule.

It's unclear what role, if any, Kavanaugh will ultimately play in refereeing the legal disputes over that climate rule. But with a lifetime appointment to the court where many of the administration's most controversial environmental rules are challenged, his environmental opinions are certain to have lasting impacts.

'Auxiliary solicitor general'

Kavanaugh's track record on big clean air cases has given the left reason to fret.

In late 2012, after the D.C. Circuit upheld a suite of EPA's early greenhouse gas regulations, Kavanaugh

penned his own lengthy opinion dissenting from his colleagues. He argued that EPA "exceeded its statutory authority" and said the whole court should have reheard the case.

The Supreme Court later agreed to hear the case and struck down portions of EPA's permitting regime that Kavanaugh, too, had found objectionable.

In a 5-4 vote, the court's conservative wing ruled in 2014 that EPA couldn't force stationary facilities to obtain air pollution permits and install pollution controls based solely on their emissions of greenhouse gases. The court also ruled that EPA unlawfully interpreted the Clean Air Act when it revised the greenhouse gas emission thresholds that trigger permitting rules for factories, for power plants and on industrial facilities.

Kavanaugh had laid out similar reasoning in his at-times sharply worded dissent. "In my view, EPA's reading of the statute was impermissible," he wrote in 2012. "An agency cannot adopt an admittedly absurd interpretation and discard an eminently reasonable one."

While he strongly repudiated the agency's legal rationale, he noted that the climate regulations in question "may well be a good idea as a matter of policy. The task of dealing with global warming is urgent and important."

The Supreme Court ruled that EPA could require greenhouse gas reductions for stationary sources that are required to obtain the permits for emissions of other pollutants. That decision was seen largely as a win for EPA, although it did limit the agency's ability to crack down on industrial facilities' emissions (*Greenwire*, June 23, 2014).

"They didn't adopt all of his reasoning but reached sort of a similar result to what Kavanaugh had suggested in his dissent from rehearing below," said Donnelly of the Constitutional Accountability Center.

"At the time, I thought there's this weird way in these environmental cases where Kavanaugh serves as almost an auxiliary solicitor general, where he can -- for the conservative justices on the court -- signal these cases might be of interest to them," he said.

'He doesn't always win'

In another high-profile clean air case surrounding hazardous air pollution from power plants, Kavanaugh appeared again to have some sway with the Supreme Court.

The D.C. Circuit last year upheld EPA standards to curb mercury and other hazardous pollution from power plants. But in the 2-1 opinion, Kavanaugh dissented from his two Democrat-appointed colleagues when it came to EPA's cost considerations.

"[W]hen considering just as a general matter whether it is 'appropriate' to regulate, it is well-accepted that consideration of costs is a central and well-established part of the regulatory decisionmaking process," he wrote. "But EPA did not consider costs here. And EPA's failure to do so is no trivial matter."

In a 5-4 opinion issued in June, the Supreme Court agreed. In the ruling backed by the court's conservative majority, Justice Antonin Scalia wrote that the Obama administration unlawfully failed to consider compliance costs before issuing the landmark rule.

"It is unreasonable," he added, "to read an instruction to an administrative agency to determine whether 'regulation is appropriate and necessary' as an invitation to ignore cost" (*Greenwire*, June 29).

In another case, Kavanaugh wrote for the majority in a 2012 ruling that tossed out EPA's Cross-State Air

Pollution Rule that aimed to rein in harmful emissions that cross state lines. "In this case," he wrote, "we conclude that EPA has transgressed statutory boundaries."

The Supreme Court agreed to hear that case, too, and in 2014 dealt a blow to Kavanaugh and the D.C. Circuit when it upheld the EPA rule (*Greenwire*, April 29, 2014).

"He doesn't always win; that's one point that's important," said Simon Lazarus, senior counsel at the Constitutional Accountability Center.

Not all of Kavanaugh's opinions have angered environmentalists.

In a 2014 ruling, Kavanaugh wrote a majority opinion that vacated part of an EPA rule for cement kilns that shielded polluters from lawsuits if they exceeded emission limits during malfunctions, a move that greens welcomed. Industry groups, too, applauded that ruling (*Greenwire*, April 18, 2014).

And he signed on to a 2013 opinion finding that EPA's 2011 retroactive veto of a major West Virginia mountaintop-removal mining project was legal (*Greenwire*, April 23, 2013).

"He's been assigned to some high-profile cases in which the EPA was acting particularly aggressively and which presented particularly difficult legal issues," Adler said.

Ultimately, Kavanaugh is someone who "really wants to get the legal questions right and doesn't worry too much about where that leads him," Adler said. "I don't think he's a consistent vote against EPA; I don't think he's a consistent vote against regulation."

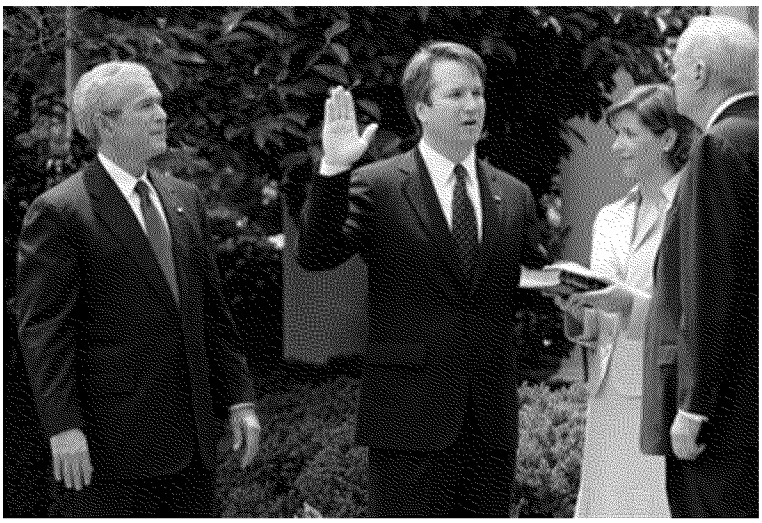
'Political animal'?

Kavanaugh's judicial tenure began with a political splash.

He was assistant to President George W. Bush and the White House staff secretary in 2003 when the president nominated him to the appeals court. The pick infuriated congressional Democrats, who painted him as a right-wing ideologue.

Sen. Charles Schumer (D-N.Y.) in 2006 called Kavanaugh the "go-to guy among young Republican lawyers appearing at the epicenter" of many controversial issues.

Kavanaugh, who was 41 at the time, had helped the Bush White House fill judicial posts with conservatives and was one of the authors of the "Starr report" issued in 1998 that argued for President Clinton's impeachment.



Kavanaugh was sworn in by Supreme Court Justice Anthony Kennedy in the White House Rose Garden in 2006. Photo by Eric Draper, courtesy of the White House.

"[I]f there has been a partisan political fight that needed a very bright legal foot soldier in the last decade, Brett Kavanaugh was probably there," Schumer said during Kavanaugh's 2006 confirmation hearing. At a previous hearing about Kavanaugh in 2004, Schumer had called the nomination "not just a drop of salt in the partisan wounds, it is the whole shaker."

At a speech earlier this year, Kavanaugh recalled those salt comments. "It's good to have your mom at these hearings," he said, according to the *Milwaukee Journal Sentinel*. "She said, 'I think he really respects you.' Gotta love your mom."

Despite Democrats' long-running complaints, Kavanaugh was ultimately confirmed in 2006.

And in his first decade on the bench, lawyers on the left and the right credit him with being smart, savvy and tough to pigeonhole.

"A lot of people -- like me, for example -- thought he was really a political person who wasn't going to be a formidable jurist as a judge, but I think we were wrong. He's very conservative, but he's clearly a thoughtful judge. ... That's why he's formidable," Lazarus said.

Said Adler, "It's hard to look at [Kavanaugh's] record on the D.C. Circuit and say he's just a political animal. He's written very thoughtful, very detailed, very impressive opinions."

And he's widely seen as a possible GOP Supreme Court nominee.

"He would, I think, be on a short list," Adler said. "He has the characteristics that presidents or those who pick judges tend to look for. Would he be a controversial nominee? I don't know."

Kavanaugh spent a stint at the high court himself; he was a clerk for Justice Anthony Kennedy from 1993 until 1994. He now manages an annual basketball game at the Supreme Court that pits its clerks against D.C. Circuit clerks. Kavanaugh and Sri Srinivasan -- an Obama appointee to the D.C. Circuit -- are the only judges who play.

And Kavanaugh is known as a "feeder judge," whose clerks often score clerkships with Supreme Court justices.

Kavanaugh hails from Bethesda, Md.; he's the only child of Martha and Ed Kavanaugh. He credits his mother, who was a state prosecutor and judge, with influencing his career path. His father was the longtime head of the trade association representing the cosmetic, toiletries and fragrance industries.

In 2004, Kavanaugh married Ashley Estes, who also worked in the Bush White House as the president's personal secretary. President Bush and first lady Laura Bush (along with their weapon-wielding Secret Service detail) attended their wedding ceremony at Christ Church in Georgetown, *The Washingtonian* reported. The Kavanaughs have two daughters.

People who know Kavanaugh describe him as a friendly, personable guy.

"Judge Kavanaugh is a real pleasure to appear before -- he's very well prepared and poses thoughtful, incisive questions in a courteous and engaging way," said Sean Donahue, an attorney who frequently represents environmental groups before the D.C. Circuit and who clerked for former Justice John Paul Stevens when Kavanaugh was also a Supreme Court clerk.

When Adler was a summer associate at Kirkland & Ellis, Kavanaugh -- then a partner at the firm -- would see Adler working late into the night and urge him to go out and have fun.

"He's always struck me as a fairly easygoing guy," Adler said. "He's not a firebrand."

NUCLEAR:

Mass. reactor to close, complicating state climate plans

Hannah Northey, E&E reporter

Published: Tuesday, October 13, 2015

Entergy Corp. announced plans today to shutter Massachusetts' only nuclear power plant in 2019, appeasing green groups and safety advocates while raising questions about whether the state can meet its goals for slashing emissions of heat-trapping greenhouse gases.

The Pilgrim Nuclear Generating Station in Plymouth will close no later than June 1, 2019, the company said, citing poor market conditions, reduced revenue and increased operating costs. The exact timing of the shutdown will be decided in the first half of 2016, Entergy said.

While the plant's license doesn't expire until 2032, the beleaguered 43-year-old facility's safety record and financial outlook took a pounding last month, with federal regulators finding "continuing weaknesses in the implementation of Entergy's program for identifying, evaluating and resolving problems at Pilgrim" (*Greenwire*, Sept. 2).

Entergy warned then it could close the plant if upgrade costs exceeded the value of operating the boiling water reactor.

Bill Mohl, the president of Entergy Wholesale Commodities, said Entergy was required to inform the region's grid operator yesterday if it wanted to participate in a capacity auction that starts tomorrow, and an "overly negative economic picture" -- as well as the Nuclear Regulatory Commission's safety finding -- prompted the decision to close the plant. Entergy, he said, has made a commitment to generate capacity from the plant through 2019, and that could be done through securing capacity from other generators if Entergy decides to shut the plant before 2019.

In a call with reporters, Mohl also said cash flows for Pilgrim, which employs about 630 people, is negative looking forward. Entergy has also warned that economics are tough for its James A. FitzPatrick nuclear power plant in New York, but Mohl said it's "premature" to discuss what will happen with that facility.

Although Massachusetts Gov. Charlie Baker (R) in the past has said the plant is part of his state's balanced energy portfolio, Entergy has been pressured by Sen. Ed Markey (D-Mass.), Attorney General Maura Healey (D) and former Gov. Michael Dukakis (D) to close the facility over safety concerns.

Some have also questioned whether Entergy can afford to continue safely operating the plant and storing nuclear waste. The company won't reveal its costs or revenues from the Pilgrim plant, but it said it's spent about $70 million upgrading it since Japan's 2011 Fukushima Daiichi disaster (*Greenwire*, Sept. 18).

Markey is a member of the Senate Environment and Public Works Committee, which has jurisdiction over NRC, and a longtime foe of nuclear power. He applauded Entergy's announcement, saying it could cost $100 million to bring the plant into compliance with NRC safety standards. The senator also doubled down on his criticism of nuclear power and called for Massachusetts to invest in wind, solar, geothermal power, efficiency and fuel-efficient vehicles.

"Pilgrim Nuclear Power Station is just the latest example of how nuclear power simply cannot compete in the current energy market," Markey said in a statement. "And alongside the economic conditions that Entergy blames this closure on, there also have been decades-long and repetitive operational safety and security concerns with the facility that have contributed to this announcement."

How the plant's closure will affect Massachusetts' ability to meet its climate goals is unclear.

Mark Kresowik, a regional director for the Sierra Club's Beyond Coal campaign, said the plant's closure would not affect the state's capacity of meeting its targets under U.S. EPA's Clean Power Plan.

The nine Northeastern states in the Regional Greenhouse Gas Initiative have signaled that they will submit a regional plan that uses RGGI as a compliance mechanism for the federal rule, meaning Massachusetts would not need to meet its targets alone. And RGGI's reduction target for 2020 is likely to be lower than the Clean Power Plan's targets for those states by 2030. So the Northeast can easily absorb the loss of Pilgrim's zero-carbon power.

EPA's rule requires states to submit preliminary plans starting next year, but they need not include detailed information about how states will meet their emissions-reduction obligations under the rule. Final plans are not due until 2018, a year before Pilgrim is slated to close.

But Emily Norton, chapter director of the Massachusetts Sierra Club, said the state's own more-stringent climate goals could be thrown into question by Pilgrim's closure. The Massachusetts Global Warming Solutions Act sets a state target of 25 percent reductions compared with 1990 levels by 2020. That compares with the Clean Power Plan's mandated 17.8 percent cut compared with 2005 levels by 2030.

"In general we're very pleased and have been advocating for the closure out of safety concerns, but this will in the short term bring some challenges to meeting our greenhouse gas reduction goals, no question about it," she said.

Massachusetts state lawmakers are considering a host of legislative solutions for raising energy production -- solar, hydropower, offshore wind and natural gas -- to offset high electricity costs in the Old Colony State.

Although the Pilgrim plant was providing a small amount of capacity in the state, Norton said the facility's output will need to be replaced and that highlights ongoing debates over the state's reliance on natural gas, controversial pipeline construction and just how much renewable investment should take place.

"We think the whole concept of having the electric customers pay for increased natural gas pipelines that will supposedly save us energy costs, we just think there needs to be a lot more analysis," Norton said.

'Deck is stacked'

Pilgrim joins a line of merchant nuclear power generators that have closed in recent months, blaming "flawed" market structures and warning that climate ramifications will follow.

Marvin Fertel, the Nuclear Energy Institute's president and CEO, said the Pilgrim closure -- despite the construction of five new reactors in the Southeast -- shows the "deck is stacked" against Pilgrim financially, even though it has generated carbon-free power and reliability in New England during extreme weather.

The closure, he said, shows that electricity markets in the Northeast are not working and do little to support aging reactors.

"Beyond literally being an electricity powerhouse for four decades, it has significantly helped improve the region's air quality and, to this day, has an important role to play in regional and national efforts to reduce greenhouse gas emissions in the electric sector," Fertel said. "There will be impacts to offset the loss of this around-the-clock source of carbon-free electricity."

Fertel noted that Dominion Resources Inc. closed the Kewaunee nuclear plant in northeast Wisconsin in 2013 and Entergy Nuclear shuttered the Vermont Yankee plant late last year because of economic pressures, closures that he said also call for market reforms. Exelon Corp., the country's largest nuclear operator, is now calling for legislation in Illinois to save its struggling plants there.

Entergy's Mohl today said the markets in the region are not "free and open" when others are subsidizing renewables and bolstering other energy sources. He also said it's "inappropriate" for Massachusetts' clean energy standard to exclude nuclear power and that the Clean Power Plant cannot work if existing reactors are removed from the market.

"You're basically picking winners and losers, and we don't think that's what a competitive market is intended to do," he said. "The consequences are the shutdown of viable facilities."

"It's another one bites the dust," Glenrock Associates analyst Paul Patterson said. "If you're a regulated nuclear plant or have a long-term [purchase power agreement], that's a different story. But if you're basically living by the revenues determined by the market, you face considerable risk due to competition."

Patterson said it's no surprise Pilgrim is closing and that merchant nuclear plants are facing cheap gas that's lowering power prices, pressure from subsidized renewables, weak demand for power, an influx of new competitive generation that's not subsidized, and regulated power competing with non-regulated generation.

Patterson said it would also appear to pose a question about the state's climate goals.

"It's carbon-free generation that will no longer be operational," he said, but he quickly added the state is taking steps to ramp up renewables and hydropower from Canada.

The region's grid operator could provide more clarity as early as next month. The New England ISO is

poised to issue a final plan in the coming weeks for meeting the region's electricity needs over the next 10 years (*EnergyWire*, Sept. 15).

Reporter Jean Chemnick contributed.

REGULATIONS:

Pollution violations more likely at public facilities -- study

Amanda Reilly, E&E reporter

Published: Tuesday, October 13, 2015

Government-owned entities are more likely to violate certain air and water regulations and less likely to receive sanctions than their private counterparts, according to a new study.

The study by researchers from Indiana University and Texas A&M University found that public power plants and hospitals were 9 percent more likely to violate Clean Air Act regulations than private-sector facilities.

And public water utilities had 14 percent more Safe Drinking Water Act health violations than private firms.

"We find consistent evidence that publicly owned facilities are more likely than similar privately owned facilities to violate regulatory requirements under the CAA and SDWA," the authors wrote. "We also revealed a tendency for enforcement officials to impose less severe punishment on public agencies violating the CAA and SDWA, when compared to similarly noncompliant private firms."

The study by Indiana University associate professor David Konisky and Texas A&M associate professor Manuel Teodoro was first published online last month in the *American Journal of Political Science*.

The researchers examined power plant and hospital records from 2000 to 2011 and water utility records from 2010 to 2013. They looked at more than 3,000 power plants, 1,000 hospitals and 4,200 water utilities -- both public and private.

According to the results, public facilities were both more likely to have committed violations of the air and water laws and less likely to have received sanctions than private facilities.

The study found that public power plants and hospitals were 20 percent less likely to be fined for violations of the Clean Air Act and 1 percent less likely to receive a punitive sanction.

Public water utilities were 3 percent less likely to be the subject of enforcement actions for violations of the Safe Drinking Water Act, compared to investor-owned utilities.

The authors theorized that was because public and private firms operate in different political environments.

"We argue that government agencies and private firms often face different compliance costs, and that agencies have greater incentives than firms to appeal regulations through political channels," the authors said. "Simultaneously, the typical enforcement instruments that regulators use to influence firm behavior may be less effective against governments."

The authors cautioned against assuming that privatization of public facilities in these sectors was the only solution.

Along with privatization, potential reforms could include subsidies and more aggressive enforcement mechanisms, they wrote.

In a statement, Konisky called for more research to see whether the trend extends to other environmental regulations.

"We also hope the idea of government regulating government will spark interest for research in other domains," he said. "We're investigating the environmental dimensions of the issue, but if other scholars want to pick up these ideas and investigate them in other spaces, that would be great."

FEDERAL AGENCIES:

Congressman offers bill to ban private email server use

Kevin Bogardus, E&E reporter

Published: Tuesday, October 13, 2015

Rep. Kevin Cramer (R-N.D.) has introduced legislation that would ban Cabinet secretaries from using private email servers for government business.

H.R. 3743, the "Securing Every Relevant and Vital Electronic Record Act of 2015," or SERVER Act, would prohibit the heads of executive departments from maintaining a private email server for conducting official business.

The bill comes after Hillary Clinton, considered the front-runner for the 2016 Democratic presidential nomination, used a private server for email while she served as secretary of State. Clinton's use of private email has become a headache for her campaign as questions have been raised over whether she complied with federal record-keeping and transparency laws.

In a statement, Cramer said his bill was in the interest of national security because government records are under attack from terrorist groups and foreign governments.

"Our nation's electronic communications and records are under constant cyber-attack by terrorist organizations and more frequently by foreign governments," Cramer said. "This legislation ensures no Department Secretary may use a private server for emails and storage of electronic data. It is in the interest of national security to ensure our nation's secrets and communications between our top leaders receive the highest level of protection."

Penalties would be stiff for those found violating the SERVER Act. A Cabinet secretary could face up to three years in prison, forfeit his or her office and be disqualified from serving again in government.

"The use of private email servers may inhibit the preservation of all records and electronic communications which may be needed for Congressional, civil or criminal investigations," Cramer said. "The SERVER Act will help ensure all records and communications are maintained and stored in compliance with federal law."

Clinton is not the only senior official who has had email troubles during the Obama administration. Former U.S. EPA Administrator Lisa Jackson also came under congressional scrutiny for her email practices

along with others at the Chemical Safety Board and IRS in recent years (*Greenwire*, March 3).

NEGOTIATIONS:

NATO calls for 'ambitious, legally-binding' climate agreement

Jean Chemnick, E&E reporter

Published: Tuesday, October 13, 2015

The North Atlantic Treaty Organization is the latest organization to weigh in on the need for the world to reach an ambitious agreement in Paris at the end of this year.

The intergovernmental military alliance of 28 nations is poised to adopt a resolution today during its annual Parliamentary Assembly meeting in Stavanger, Norway, that would urge members to pursue "an ambitious, legally-binding, rules-based, universal, flexible, balanced, sustainable and dynamic agreement" during this year's U.N. climate talks.

"In Paris, our governments must take actions that they will not regret in a few years' time," said Baroness Meta Ramsay, chairwoman of the Science and Technology Committee and member of the U.K. House of Lords, in a statement. She added that the Paris conference must not be a repeat of the Copenhagen, Denmark, talks five years ago that failed to produce a deal on emissions to follow the expiring Kyoto Protocol.

The resolution asks nations to make good on their national pledges to the U.N. Framework Convention on Climate Change, endorses proposals to periodically review those contributions after an agreement has been reached and calls for an overall goal of keeping warming to 1.5 or 2 degrees Celsius above preindustrial levels. Scientists say that threshold would allow the world to avoid the worst effects of climate change, but those who track the negotiations say current pledges fall far short of meeting the goal.

The NATO resolution also states that its nations are "fully convinced that climate change-related risks will affect international security through increased natural disasters; stress on economic, food and water security; risks to public health; internal and external migration; and resource competition."

It calls for greater engagement within NATO to respond to these security threats, including a heightened focus on warming during the alliance's summits going forward.

The resolution is one of eight the alliance will vote on today. Other topics include Ukraine and international terrorism -- more traditional areas of concern for the military alliance. But NATO's resolution is consistent with the U.S. military's heightened focus on climate change, which it has called a "threat multiplier."

PUBLIC OPINION:

70% of Americans now believe in climate change -- poll

Published: Tuesday, October 13, 2015

About 70 percent of Americans now believe in climate change science, according to a new survey -- the highest acceptance level since 2008.

The belief level rose 7 percentage points in the last half a year, according to polling by Muhlenberg College and the University of Michigan. The increase in acceptance was particularly notable among evangelical Christians and Republicans, the researchers said.

People appear to recognize the role that climate change is having on weather patterns, said co-author Barry Rabe, a professor from the University of Michigan. Many of the survey respondents noted weather events like droughts or floods close to home that influenced their opinion.

Support was also strong for renewable energy, energy efficiency measures and natural gas. Solar power had a 90 percent approval rating among respondents.

The survey was conducted shortly before Pope Francis' visit to the United States, which the authors noted appeared to have an effect on the results. About 15 percent of respondents said the pope's visit had made them more convinced regarding climate change (Emma Howard, London *Guardian*, Oct. 13). **-- BTP**

WIND:

Gusts damage turbine -- but not much else -- in Mont.

Published: Tuesday, October 13, 2015

Wind gusts Sunday in two Montana cities reached as high as 72 miles per hour, but except for a damaged wind turbine at Billings' City College campus, damage was moderate.

"We didn't really get a lot of damage reports, which is kind of odd," said Marc Singer, science and operations officer for the National Weather Service. "It was obviously a really windy day."

"Broken roofs, gutters, decks," Tom Yelvington, an arborist with Yellowstone Valley Tree Surgeons, said of the damage he'd seen. "Other storms we've looked at, there's been car damage and other things. But this one wasn't that bad really."

Taisei Tech, the maker of the turbine near the Montana State University campus, did not respond for comment (Mike Kordenbrock, *Billings Gazette*, Oct. 13). **-- BTP**

AIR POLLUTION:

Leonardo DiCaprio to produce movie about Volkswagen scandal

Published: Tuesday, October 13, 2015

Actor Leonardo DiCaprio and producer Jennifer Davisson have agreed to produce a Paramount movie about the Volkswagen diesel scandal.

Paramount had bought movie rights to a coming book by *New York Times* reporter Jack Ewing on the scandal, in which Volkswagen used illegal technology to selectively turn on emissions controls and cheat on U.S. EPA standards. While the vehicles were driving normally, the emissions controls would turn off, releasing up to 40 times more pollution than permitted (*Greenwire*, Sept. 18).

Volkswagen is potentially facing tens of billions of dollars in fines from EPA (*E&ENews PM*, Sept. 25).

No other details about the movie have been announced (Dave McNary, *Variety*, Oct. 12). **-- BTP**

ELECTRIC VEHICLES:

New Tesla could qualify for $35,000 in tax breaks

Published: Tuesday, October 13, 2015

Some buyers of Tesla Motors' new Model X could qualify for up to $35,000 in tax and rebate benefits, but a growing resentment toward tax benefits for upper-class Americans could cause a backlash.

"This is a high-priced vehicle that only wealthy people can buy," said Karl Brauer of Kelley Blue Book. "There are a lot of people who believe we have already done enough to help Tesla."

Section 179 of the Internal Revenue Service code allows small-business owners to receive a tax credit for purchasing heavy equipment. The "Hummer tax loophole" is limited to vehicles over 6,000 pounds, a limit the Model X will slightly surpass. This $25,000 tax credit comes on top of a $7,500 federal tax credit and a $2,500 California rebate for electric vehicle buyers.

Tesla founder Elon Musk has yet to announce a base price for the Model X, but the fully loaded "Signature Series" released last month cost $132,000.

"If a Realtor is buying a station wagon to drive clients around and show houses, that might be considered appropriate, but with a Tesla you are leaving that realm," said Steve Ellis, vice president of Taxpayers for Common Sense. "It's more of a toy, and they are abusing the system" (Fleming/Hirsch, *Los Angeles Times*, Oct. 13). **– BTP**

Power Plan Hub:

Regional groups look to carbon trading for Clean Power Plan

Emily Holden and Rod Kuckro, E&E reporters

Published: October 13, 2015

Regional coalitions of states that are exploring Clean Power Plan options are focusing heavily on whether carbon trading might help them meet their goals.

In the West, the Colorado-based Center for the New Energy Economy has organized states in the Western Electricity Coordinating Council, which spans from the coast to the eastern edge of Colorado. In the Midwest, the Bipartisan Policy Center is joining forces in coordinating sessions among states within the Midcontinent Independent System Operator. In the Southeast, Duke University's Nicholas Institute for Environmental Policy Solutions is holding similar state dialogues. And in the Mid-Atlantic, states in the PJM Interconnection have formed a new coalition to focus on the Clean Power Plan.

POWER PLAYS

Each Monday, **Power Plays** previews upcoming moves on the way to Clean Power Plan compliance and recaps the week's developments.

To read more about their discussions, check out this morning's *ClimateWire* and *EnergyWire* for dispatches from E&E's regional reporters.

With Congress in recess, the Clean Power Plan agenda of events is light this week.

Starting today, the National Summit on Smart Grid & Climate Change will explore the smart grid's role in plans developed for the Clean Power Plan. Speakers include Energy Secretary Ernest Moniz and top officials from the Office of Management and Budget and National Security Council, as well as representatives from state air and energy offices and a number of electric utilities.

In case you missed it:

- New York Gov. Andrew Cuomo (D) announced his state will "explore the possibility" of linking the Northeast's carbon cap-and-trade system with California's (*ClimateWire*, Oct. 9).

- The director of Georgia's Environmental Protection Division told a packed room of electric utility officials, policymakers, clean energy advocates and others to set aside their personal views of U.S. EPA's Clean Power Plan and help the Peach State draft a plan that would meet its carbon-reduction goals (*EnergyWire*, Oct. 9).

- Kentucky Attorney General Jack Conway, the Democratic nominee for governor in next month's election, promised not to implement the Clean Power Plan pending litigation against the rule (*Greenwire*, Oct. 8).

- North Carolina may limit Clean Power Plan implementation to actions "inside the fence line" of coal-fired power plants, meaning the state would likely fall short of its obligations (*EnergyWire*, Oct. 8).

- Fourteen attorneys general submitted a Freedom of Information Act request seeking evidence that EPA intentionally delayed the rule's publication (*ClimateWire*, Oct. 8).

For questions or comments about E&E's Power Plan Hub or related stories, please email staff reporters Emily Holden and Rod Kuckro at PowerPlanHub@eenews.net.

2016 VW diesels have new software affecting emissions tests

Posted: Wednesday, October 14, 2015 10:15 am

WASHINGTON (AP) — Volkswagen has disclosed to U.S. regulators that there is additional suspect software in its 2016 diesel models that would potentially help their exhaust systems run cleaner during government tests.

Volkswagen confirmed to The Associated Press that the "auxiliary emissions control device" at issue operates differently from the "defeat" device software included in the company's 2009 to 2015 models disclosed last month. That disclosure triggered the worldwide cheating scandal engulfing the world's largest automaker.

The newly revealed software makes a pollution control catalyst heat up faster, improving performance of the device that separates smog-causing nitrogen oxide into harmless nitrogen and oxygen gases.

VW spokeswoman Jeannine Ginivan said the new issue with the 2016 vehicles was first revealed last week to U.S. Environmental Protection Agency and California regulators.

"Volkswagen has disclosed, in the application process for the model year 2016 2.0 TDI models, an auxiliary emissions control device," Ginivan said. "This has the function of a warmup strategy which is subject to approval by the agencies. The agencies are currently evaluating this and Volkswagen is submitting additional information."

AP first reported last week that the EPA and California Air Resources Board are investigating "the nature and purpose" of additional software on the new VW models. Regulators have not yet determined whether the code is a defeat device installed specifically to cheat on emissions tests, said Janet McCabe, acting assistant EPA administrator for air quality.

"We have a long list of questions for VW about this," she said Tuesday at a dedication ceremony for a new heavy-duty truck testing lab in Ann Arbor, Michigan. "We're getting some answers from them, but we do not have all the answers yet."

Volkswagen already faced an ongoing criminal investigation and billions in fines for violating the Clean Air Act for its earlier emissions cheat, as well as a raft of state investigations and class-action lawsuits filed on behalf of customers.

If it is determined the new issue is a second defeat device, that would call into question recent assertions by top VW executives that responsibility for the cheating scheme lay with a handful of rogue software developers who wrote the original code installed with the company's diesel engines starting with the 2009 model year.

The separate device included in the redesigned 2016 cars would appear to suggest a multi-year effort by the company to influence U.S. emissions tests that continued even after regulators began pressing the company last year about irregularities with the emissions produced by the older cars.

A congressional staffer briefed on the issue last week told AP that VW probably didn't need the additional software to meet government emissions standards, but that the device appears intended to ensure the 2016 cars would pass by wider margins. The staffer spoke on the

condition of anonymity because he was not authorized to talk publicly about the ongoing investigation.

The company's most senior U.S.-based executive announced in congressional testimony last week that the German automaker had withdrawn applications seeking certification of its 2016 diesels because of on-board software that hadn't been disclosed to regulators.

However, the statement by Volkswagen of America CEO Michael Horn left unclear whether the issue with the 2016 models was the same as that in the earlier models, or whether it potentially constituted a new violation. Manufacturers are required by law to disclose any devices affecting emissions controls as part of the process to receive the EPA certifications required to sell the cars in the country.

EPA's McCabe wouldn't say if VW's failure to disclose the software in its 2016 application for emissions certification was illegal. "I don't want to speak to any potential subjects of an enforcement activity," she said.

VW is now working with regulators to continue the certification process needed to sell the 2016 diesel cars.

The delay is bad news for Volkswagen dealers, who had been anticipating delivery of the new models to replace older inventory which they can no longer offer to customers. Thousands of 2016 Beetles, Golfs, Jettas and Passats will remain quarantined in U.S. ports until a fix can be developed, approved and carried out.

Matthew Daly contributed from Washington. Krisher reported from Ann Arbor, Michigan.

"Dozens" of managers implicated in Volkswagen scandal

by Geoffrey Smith

OCTOBER 14, 2015, 10:37 AM EDT

And there's more woe for VW as the designated head of its new North America region refuses to take up post.

The external investigation that Volkswagen AG VLKAY 0.41% commissioned is making alarmingly quick (and leaky) progress.

According to the German magazine and website Der Spiegel, the circle of managers with direct knowledge of how the company falsified the emissions performance of its diesel vehicles is much wider than the company had so far indicated. Last week, Michael Horn, head of the company's U.S. operations, had told a Congressional committee that the decision to install "defeat devices" that masked the actual level of emissions was taken by a small group, and wasn't a corporate decision.

Der Spiegel cited company sources as saying that "at least 30 people" were involved in the scandal, and that the final number may be higher. Earlier this month, VW's board had commissioned law firm Jones Day LLC to conduct an investigation into the affair, promising a rigorous clean-up. Spiegel's story referred to the first preliminary findings of that investigation. These aren't being made public yet.

It wasn't clear whether the company had suspended any more employees. According to media reports, the senior R&D managers at the group's three leading brands, VW, Audi and Porsche, have all been suspended while the investigation goes on.

A spokesman for Volkswagen didn't immediately respond to a request for comment.

In separate news Wednesday, it emerged that Winfried Vahland, who was slated to take over as head of the VW group's new North American division, is to leave the company at his own request.

The new structure was unveiled at the first board meeting after the resignation of CEO Martin Winterkorn, and was aimed at devolving more power away from the group's headquarters in Germany.

Škoda, the low-end, Czech-based unit of VW which Vahland has run for the last five years, said "differing views on the organisation of the new Group region have led to this decision." It added that it is "expressly not related to current events on the issue of diesel engines."

Vahland had been with the VW group for 25 years, and had run Czech-based Škoda since 2010. Before that he had been head of VW's regional operations in China. According to some reports, Winterkorn had pressed for Vahland to succeed him as CEO.

After pollution scandal, Volkswagen to focus on electric vehicles

October 14th, 2015 by Associated Press

Volkswagen says it will shift its focus toward developing electric cars.

It aims to develop new hybrid and electric vehicles in response to its emissions scandal.

The new steps were part of a plan to confront the company's scandal over cars that were equipped with computer software that let them evade U.S. emissions tests.

Volkswagen division head Herbert Diess said in a statement Tuesday the company would change its approach to diesel emissions in Europe and North America and adopt so-called selective catalytic converter technology, or SCR. That is a system that injects the chemical substance urea into the exhaust stream to neutralize harmful nitrogen oxides.

He said that change would come "as soon as possible."

Diess also said the company would reduce spending on investments by 1 billion euros ($1.1billion) and redouble efforts to cut other costs.

Volkswagen will expand its modular construction system — which involves sharing technical specifications and parts across different models to save money — to include new plug-in hybrid and electric vehicles.

The company additionally plans to turn the next version of its large Phaeton luxury sedan into an electric-only vehicle to demonstrate the company's technological competence.

The Phaeton, a project introduced by former CEO Ferdinand Piech, has been criticized as a money-loser. The Piech and Porsche families own the majority of voting shares in Volkswagen through a holding company.

"The Volkswagen brand is repositioning itself for the future," Diess said in a statement. "We are becoming more efficient, we are giving our product range and our core technologies a new focus, and we are creating room for forward-looking technologies by speeding up the efficiency program."

Diess is a recent hire from competitor BMW, where he oversaw development of new models including the i3 electric and i8 plug-in hybrid vehicles.

Volkswagen AG, whose other brands include Audi and Skoda, is facing a crisis after U.S. authorities said it evaded emissions checks on 482,000 vehicles. The company has set aside 6.5 billion euros ($7.3 billion) to cover the costs of recalls and fines. But analysts say the costs in terms of fines and lost sales will likely be considerably higher.

Earlier, the governor of Germany's Lower Saxony state, which holds a 20 percent stake in Volkswagen, said the automaker should have admitted earlier that it manipulated emissions data in the U.S. Volkswagen acknowledged the deception to U.S. regulators on Sept. 3, more than a year after researchers published a study showing the real-world emissions of two VW models were far higher than allowed.

Governor Stephan Weil told Lower Saxony's state legislature on Tuesday that "this confession should clearly have come a great deal earlier — another serious mistake," news agency dpa reported.

Weil sits on Volkswagen's board of directors. He has said that the state's representatives were "completely surprised" by the emissions scandal and vowed to work to protect jobs.

Volkswagen North America Chief-Designate Quits

Winfied Vahland was head of Skoda brand

By SARAH SLOAT

Oct. 14, 2015 9:05 a.m. ET

FRANKFURT— Volkswagen AG parted ways with another senior executive Wednesday. Winfried Vahland is leaving the company due to differences over the auto maker's North America organization, which he was poised to oversee.

The automotive group, in the grips an international emissions-testing scandal, had designated Mr. Vahland, currently the head of Volkswagen's Czech Republic-based Skoda brand, as the new chief of its North America business last month.

"This decision is expressly not related to current events on the issue of diesel engines," Skoda said in a statement. Skoda said Mr. Vahland is leaving at his own request.

Volkswagen has been in disarray since mid-September, when it admitted to using software in millions of diesel cars that allow them to run cleaner in emissions tests than on the road. The disclosure, which came first for cars sold in the U.S., triggered a boardroom reshuffle, a profit warning and cutbacks in investment spending.

The group's supervisory board elected Hans Dieter Pötsch, the company's 64-year-old chief financial officer, as chairman last week, filing a post left open since April when former patriarch Ferdinand Piëch resigned. Matthias Müller, head of Volkswagen's Porsche brand, had replaced Martin Winterkorn as Volkswagen's CEO after Mr. Winterkorn resigned last month in the wake of the diesel-engine scandal.

New Volkswagen North America chief Winfried Vahland out after three weeks

Nathan Bomey, USA TODAY 9:19 a.m. EDT October 14, 2015

Volkswagen's newly appointed head of North America is leaving the company less than three weeks after he was assigned to that position, injecting a new measure of instability as the company navigates an emissions scandal.

The sudden exit of Winfried Vahland gives the company's sweeping restructuring of its global operations a discombobulated feel, raising further questions about the future of its business in the U.S.

Vahland and Volkswagen had "differing views" on the company's new structure, the automaker said in a statement. His exit is "expressly not related" to the emissions scandal, VW said.

Vahland's swift appointment as head of the new North America region on Sept. 25 was billed as critical to creating a cohesive strategy for Volkswagen in one of the company's few weak spots. It came just a week after the U.S. Environmental Protection Agency exposed the fact that Volkswagen had installed software on vehicles to cheat emissions tests.

The company's U.S. chief, Michael Horn, who was set to report to Vahland, is staying in his current role.

Volkswagen did not immediately name a successor for Vahland, who also led Volkswagen's China operation for a period and was most recently chairman of the Skoda brand.

"In the last 25 years, Professor Vahland made a great contribution to the company," Volkswagen Group CEO Matthias Mueller said in a statement. "We respect his decision and thank him for his exceptional performance."

AP

Recently named head of VW North America will not take post

By DAVID McHUGH and TOM KRISHER

Oct. 14, 2015 9:38 AM EDT

FRANKFURT, Germany (AP) — The recently named head of Volkswagen's North American business won't be taking up his new job - and has left the company.

The announcement comes as Volkswagen faces a scandal over rigging the results of emissions testing of its diesel vehicles in the U.S. It means that one of the company's most experienced managers will not be coming to lead the company's response in the United States as it faces possible heavy fines from the Environmental Protection Agency.

Volkswagen's Skoda division made the announcement about its chairman, Winfried Vahland, in a news release on Wednesday.

The release said that Vahland will not be moving to take over his new position carrying overall responsibility for North America. It said his decision to quit was not related to the scandal over the diesel engines.

On Sept. 24, Volkswagen announced a reorganization of its North American operations that put Vahland over country executives including Volkswagen's U.S. chief, Michael Horn. The announcement came the same day Volkswagen named Matthias Mueller as CEO after Martin Winterkorn stepped down from the job.

VW had said Horn would remain as president and CEO of Volkswagen Group of America, but its U.S., Canada and Mexico markets will be "combined and significantly strengthened" to form a new "North America region" led by Vahland.

Vahland, the former head of VW's crucial China business, was leaving because of "differing views on the organization of the new group region."

Mueller thanked him for 25 years of service and a "great contribution to the company."

"We respect his decision and thank him for his exceptional performance," Mueller was quoted as saying in the Skoda statement.

Skoda, based in the Czech Republic, is one of VW's brands, which also include Audi, SEAT, Lamborghini and Bentley.

Forbes:

http://www.forbes.com/sites/beltway/2015/10/13/how-a-carbon-tax-could-have-prevented-the-volkswagen-diesel-scandal/2/

How A Carbon Tax Could Have Prevented The Volkswagen Diesel Scandal

Howard Gleckman, CONTRIBUTOR

If anyone needed another example of why a carbon tax is a good idea, look no further than Volkswagen's diesel scandal. The automaker's efforts to game the current system are a case study in what's wrong with government attempts to reduce pollution with regulation and tax subsidies, rather than through a relatively straight-forward tax on carbon-based fuels.

The current system is complex mix of environmental carrots and sticks. The sticks include regulation such as fuel economy standards. The carrots include tax subsidies. One was the (now-expired) alternative motor vehicle tax credit that was available to specific models that met detailed fuel economy requirements. Two models of VW Jettas qualified for credits of $1,300 and the LA Times reported in September that the government paid as much as $51 million in credits to buyers of VW diesel cars.

Unable to limit emissions, give consumers the high performance they want, and meet fuel economy standards, VW cheated. As you know by now, the firm installed software in its diesel cars designed to fool routine emissions tests—which made the cars appear "cleaner" than they really were. In all, VW reportedly sold 500,000 cars in the US from 2009-2015 with the rogue software. Here is a helpful description from Vox explaining the whole sad story.

VW eventually got caught, of course. It faces penalties from EPA and potential criminal charges for violating the False Claims Act, as well as an investigation by the Senate Finance Committee. CEO Martin Winterkorn has resigned and the firm has stopped selling diesel cars in the US.

Still, a lot of this mess could have been avoided with a carbon tax. Such a levy could replace many—though not all– of these complex rules and eliminate most incentives for gaming. A carbon tax would not help reduce local air pollutants such as NOx so it would not replace all auto pollution regulations. But it could supplant those that aim to reduce carbon emissions from vehicles.

For drivers, the choice would be relative simply: You buy a carbon-based fuel, you pay a tax. The more carbon in the fuel, the more tax you pay. The manufacturer wouldn't need to hit a mandated fuel economy standard. No-one would need to worry about conflicting regulations.

Instead, consumers would likely respond to higher taxes by demanding cars that, one way or another, use less carbon-based fuel. We have lots of evidence that consumers are extremely responsive to changes in gasoline prices—the price goes up, they buy Priuses; it goes down, they switch to less fuel-efficient vehicles.

And with a big carbon tax, manufacturers will probably respond to consumer demands by producing low-carbon vehicles. The proof will be at the pump. If an automaker lies about its fuel efficiency, it will be immediately obvious: Consumers will be filling up their tanks more often than they expected. And government won't have to test carbon emissions from tens of millions of cars. It will just need to calculate the carbon content of their fuel.

There is one other classic argument for corrective taxes such as a carbon tax. Such a levy provides ongoing incentives for firms to enhance technology and continue to drive down emissions. But with regulation or subsidies, even honest producers are more likely to hit the mandated target—and stop.

This is not to suggest that carbon taxes are not without their own complex issues. My Tax Policy Center colleagues Donald Marron and Eric Toder have described some of the technical challenges. But overall, market mechanisms such as carbon taxes (or a cap-and-trade system) are far more efficient, and much less prone to cheating, than a system based on regulations and subsidies.

Bloomberg:

http://www.bloomberg.com/news/articles/2015-10-14/volkswagen-s-designated-north-america-chief-leaves-carmaker

Volkswagen's Designated North America Chief Leaves Carmaker

Christoph Rauwald

October 14, 2015 — 8:58 AM EDT

Volkswagen AG's designated North America chief turned down the job in the wake of a management revamp triggered by the diesel-emissions scandal.

Winfried Vahland, a company veteran who currently leads VW's Czech Skoda unit, decided to not take over the new post as had been planned and will leave the carmaker, Skoda said in an e-mailed statement.

Vahland was among the candidates to succeed former VW Chief Executive Officer Martin Winterkorn, who resigned last month, but the supervisory board favored former Porsche chief Matthias Mueller. Vahland is leaving Wolfsburg, Germany-based Volkswagen at his own request. His departure is unrelated to the investigations into the rigging of millions of diesel engines worldwide, Skoda said in the statement.

Volkswagen said Tuesday it will reduce annual investment by about 1 billion euros ($1.1 billion) at its namesake car brand as the automaker steps up a cost-cutting push to weather the impact of the diesel-emissions scandal.

VW is under increasing financial strain following revelations last month that it rigged diesel engines to circumvent emissions regulations. The company set aside 6.5 billion euros for repairs and to compensate customers, but has said that won't be enough. VW faces numerous lawsuits in the U.S., where it has lost money and struggled to become more than an also-ran despite rapid expansion elsewhere.

Vahland was appointed head of VW's North American operations as part of a restructuring plan pushed by Mueller and meant to shift more responsibility to brand and regional managers. VW wasn't immediately available to comment on whether it still planned to fill the post.

Business Insider:

http://www.businessinsider.com/r-bosch-sees-diesel-market-so-far-unharmed-by-volkswagen-scandal-2015-10

Bosch sees diesel market so far unharmed by Volkswagen scandal

RENNINGEN, Germany (Reuters) - German automotive supplier Robert Bosch [ROBG.UL] has not seen any change so far in the diesel car market as a result of an emissions scandal that has rocked Volkswagen , its chief executive said on Wednesday.

"It will depend, though, on an active campaign for diesel to quickly dispel the current uncertainty that many consumers are feeling," Volkmar Denner told reporters at the opening of a new research center in the German town of Renningen near Stuttgart.

German Economy Minister Sigmar Gabriel warned against condemning diesel technology overall but said Germany needed to do better in switching to alternative engines.

He said he favored introducing incentives to reduce the price difference between electric and conventional cars.

Volkswagen, Europe's largest carmaker, last month admitted to cheating U.S. diesel emissions tests, sparking a crisis that unseated its CEO and wiped around a quarter off its market value.

Bosch is the maker of a popular diesel engine management program used by several top automakers including VW, which U.S. officials said last week was not preprogrammed to detect when a vehicle was undergoing laboratory emissions testing.

But it is not clear what role Bosch played, how closely it worked with VW to modify the engine management software and how much it knew about VW's intentions to use software to cheat on emissions standards.

Denner declined to comment on the matter.

He added that VW had not started talks to demand lower prices, following a media report that VW planned to extract 3 billion euros in price cuts from its suppliers to help mitigate the costs of the scandal.

Detroit News:

http://www.detroitnews.com/story/business/autos/2015/10/13/ann-arbor-epa-lab-diesel-tests-vw-scandal/73888296/

Ann Arbor EPA lab tests other cars after VW scandal

Michael Martinez, The Detroit News 5:05 p.m. EDT October 13, 2015

Ann Arbor — The Environmental Protection Agency on Tuesday said it's begun testing other automakers' vehicles in the wake of Volkswagen AG's massive diesel-testing scandal. Some of those tests are being done at the agency's emissions testing lab in Ann Arbor.

Janet McCabe, assistant administrator of the EPA's office of air and radiation, said the agency is "upping our game" following VW's admission last month that it cheated on emissions tests for more than 11 million diesel cars worldwide. The EPA said late last month it would conduct more spot checks of light-duty cars and trucks, testing vehicles owned by individuals and rental companies in real-world driving conditions. The EPA also could take cars from manufacturers'

assembly lines.

"We're focused on diesel right now, but ... we're becoming the unpredictable EPA, so we'll be testing a range of vehicles with a range of configurations and situations," McCabe told reporters at a Wednesday technology showcase event.

The EPA sent letters to automakers late last month, warning that it will take further steps to prevent fraud. New safeguards will "detect any kind of defeat devices" that might turn off pollution-control equipment, Chris Grundler, the head of the EPA's office of transportation and air quality, said. He called the new tests part of an "evolution" of enforcement.

McCabe declined to say if the agency discovered that any other automakers have used defeat devices. "When we finish that process we'll be able to talk about the results," she said.

The California Air Resources Board and Environment Canada also are conducting real-world vehicle emissions testing, and all three facilities plan to share the results.

McCabe said the EPA isn't necessarily looking at software that could potentially trigger the defeat devices, which VW used to evade tests on its diesel vehicles.

"Our focus is on what's coming out of the tailpipe, which is how our standards are set and what the cars need to be measured up against," she said. "What we're focused on is whether they meet the standards that are in our rules."

McCabe was in Ann Arbor Wednesday to celebrate the launch of the EPA's new heavy-duty truck chassis dynamometer, a $3 million piece of equipment built in Germany that allows the agency to perform emissions tests on full-size heavy-duty trucks. Previously, the EPA had to spend about a week removing truck engines to run the tests.

The new dynamometer is housed in part of the agency's 200,000-square-foot National Vehicle &

Fuel Emissions lab in Ann Arbor. The lab includes a number of emissions testing rooms that run simulations on cars, trucks and even small equipment like lawn mowers in a wide range of climates and conditions

EPA hasn't decided if new software on 2016 VW diesels is legal

ANN ARBOR, MICH. | BY PAUL LIENERT

U.S. regulators haven't determined the legality of a new emission-control device on Volkswagen's (VOWG_p.DE) 2016 diesel models, a top official said on Tuesday.

Those models still have not been certified for sale by the U.S. Environmental Protection Agency.

The existence of the new software was made public last week by VW's top U.S. executive in testimony to a congressional subcommittee investigating the German automaker's diesel cheating scandal.

The company has not confirmed speculation that the new software was configured before the wider emissions scandal broke on Sept. 18.

"We have a long list of questions for VW," said EPA Assistant Administrator Janet McCabe at a media briefing here. "When we have all of the answers, we will be able to make a determination" on the whether the device is legal or considered to be a "defeat device" designed to circumvent U.S. emission rules.

VW last month admitted that it installed illegal software on its 2009-2015 U.S. diesel models that enabled the cars to pass laboratory tests, but dump higher-than-legal limits of pollutants in real-world driving.

VW told regulators only recently that some of its U.S. diesel models included a previously undisclosed software feature that could affect emission controls on the 2016 models, according to Michael Horn, president and CEO of Volkswagen Group of America. Horn told U.S. lawmakers last week that the company subsequently had withdrawn its application for EPA certification of its 2016 diesel models.

Asked for additional detail, a VW spokesperson on Monday said the software "has the function of a warmup strategy which is subject to approval" by EPA. Typical diesel emission control systems are designed to be most effective when the engine is warmed up.

The EPA defines such software as an "auxiliary emission control device," or AECD, and describes it as any device that can change the operation of the vehicle's emission control system.

The agency also requires automakers to disclose the existence of such a software device, including "a rationale for why it is not a defeat device."

VW on Monday said the EPA is evaluating the new software device, and that the automaker is "working with the regulators to continue the 2016 certification process" for VW vehicles equipped with the 2.0-liter diesel engine.

Daily Caller:

http://dailycaller.com/2015/10/13/volkswagen-lobbied-obama-administration-for-green-tax-credits/

Volkswagen Lobbied Obama Administration For Green Tax Credits

STEVE BIRR

11:41 AM 10/13/2015

As President Barack Obama pushed his green energy proposals for the auto-industry in 2011, Volkswagen was lobbying the administration for tax credits on its now tainted line of diesel vehicles.

Volkswagen wanted a green tax credit that applies to electric cars to be given to their diesel line as well. The Environmental Protection Agency, however, refused to go along with Volkswagen's plan and also declined Toyota's request to apply the same tax credit to their hybrid electric cars.

EPA documents from 2009 and 2010 show that Volkswagen supported the Obama administration's plan to reduce carbon dioxide emissions from automobiles. Former VW CEO Stefan Jacoby wrote to the EPA in 2010 praising their "leadership on this important subject." Jacoby, along with the EPA and other auto-makers, said they would "aim to make substantial annual progress in reducing transportation sector greenhouse gas emissions and fossil fuel consumption consistent with the Obama Administration's energy and climate security goals."

While Volkswagen was publicly backing White House efforts to tackle global warming and push green vehicles, the automaker was quietly lobbying behind the scenes to get government subsidies — the political price for the company's support of Obama's agenda. But the EPA refused to play ball, and Volkswagen withdrew its support for Obama's green vehicle push, according to The New York Times.

Margo Oge, the former director of the EPA Office of Transportation and Air Quality who worked closely with auto-makers on these proposals, told The New York Times that Volkswagen "wanted a special deal for diesel cars that we now know weren't even meeting the standard." Oge suggested that Volkswagen thought their diesel technology was superior to electric or hybrid alternatives, saying, "These people had religion, and that religion was diesel."

When Obama announced his plan to reduce carbon dioxide emissions from cars, Volkswagen was one of the only major automakers to not sign a letter of support for the president's agenda. The New York Times reports that much of this attitude came from overseas.

"My sense was that things were being dictated by Germany," said Oge.

Without a tax credit or subsidy, Volkswagen was going to have a tougher time meeting regulatory standards on emissions while still being able to advertise their diesel vehicles' good fuel economy and relatively low price. These reasons might have played a role in Volkswagen using "defeat devices" to get around EPA emissions tests.

Despite Volkswagen's efforts to get government assistance for their diesel line, their lobbying footprint in America remains relatively small, which could hurt them as this scandal moves forward. Volkswagen spent just $1.2 million on lobbying in 2014, a number dwarfed by General Motors which spends an average of $8.5 million a year on lobbying.

GM just recently settled with the government over the fact that they knowingly hid information about a faulty ignition switch that was linked directly to the deaths of 174 people. They were fined only $900 million and no one at GM was ever charged. Volkswagen currently faces up to $18 billion in potential fines.

2016 VW diesels have new software affecting emissions tests

Posted: Wednesday, October 14, 2015 10:15 am

WASHINGTON (AP) — Volkswagen has disclosed to U.S. regulators that there is additional suspect software in its 2016 diesel models that would potentially help their exhaust systems run cleaner during government tests.

Volkswagen confirmed to The Associated Press that the "auxiliary emissions control device" at issue operates differently from the "defeat" device software included in the company's 2009 to 2015 models disclosed last month. That disclosure triggered the worldwide cheating scandal engulfing the world's largest automaker.

The newly revealed software makes a pollution control catalyst heat up faster, improving performance of the device that separates smog-causing nitrogen oxide into harmless nitrogen and oxygen gases.

VW spokeswoman Jeannine Ginivan said the new issue with the 2016 vehicles was first revealed last week to U.S. Environmental Protection Agency and California regulators.

"Volkswagen has disclosed, in the application process for the model year 2016 2.0 TDI models, an auxiliary emissions control device," Ginivan said. "This has the function of a warmup strategy which is subject to approval by the agencies. The agencies are currently evaluating this and Volkswagen is submitting additional information."

AP first reported last week that the EPA and California Air Resources Board are investigating "the nature and purpose" of additional software on the new VW models. Regulators have not yet determined whether the code is a defeat device installed specifically to cheat on emissions tests, said Janet McCabe, acting assistant EPA administrator for air quality.

"We have a long list of questions for VW about this," she said Tuesday at a dedication ceremony for a new heavy-duty truck testing lab in Ann Arbor, Michigan. "We're getting some answers from them, but we do not have all the answers yet."

Volkswagen already faced an ongoing criminal investigation and billions in fines for violating the Clean Air Act for its earlier emissions cheat, as well as a raft of state investigations and class-action lawsuits filed on behalf of customers.

If it is determined the new issue is a second defeat device, that would call into question recent assertions by top VW executives that responsibility for the cheating scheme lay with a handful of rogue software developers who wrote the original code installed with the company's diesel engines starting with the 2009 model year.

The separate device included in the redesigned 2016 cars would appear to suggest a multi-year effort by the company to influence U.S. emissions tests that continued even after regulators began pressing the company last year about irregularities with the emissions produced by the older cars.

A congressional staffer briefed on the issue last week told AP that VW probably didn't need the additional software to meet government emissions standards, but that the device appears intended to ensure the 2016 cars would pass by wider margins. The staffer spoke on the condition of anonymity because he was not authorized to talk publicly about the ongoing investigation.

The company's most senior U.S.-based executive announced in congressional testimony last week that the German automaker had withdrawn applications seeking certification of its 2016 diesels because of on-board software that hadn't been disclosed to regulators.

However, the statement by Volkswagen of America CEO Michael Horn left unclear whether the issue with the 2016 models was the same as that in the earlier models, or whether it potentially constituted a new violation. Manufacturers are required by law to disclose any devices affecting

emissions controls as part of the process to receive the EPA certifications required to sell the cars in the country.

EPA's McCabe wouldn't say if VW's failure to disclose the software in its 2016 application for emissions certification was illegal. "I don't want to speak to any potential subjects of an enforcement activity," she said.

VW is now working with regulators to continue the certification process needed to sell the 2016 diesel cars.

The delay is bad news for Volkswagen dealers, who had been anticipating delivery of the new models to replace older inventory which they can no longer offer to customers. Thousands of 2016 Beetles, Golfs, Jettas and Passats will remain quarantined in U.S. ports until a fix can be developed, approved and carried out.

Matthew Daly contributed from Washington. Krisher reported from Ann Arbor, Michigan.

"Dozens" of managers implicated in Volkswagen scandal

by Geoffrey Smith

OCTOBER 14, 2015, 10:37 AM EDT

And there's more woe for VW as the designated head of its new North America region refuses to take up post.

The external investigation that Volkswagen AG VLKAY 0.41% commissioned is making alarmingly quick (and leaky) progress.

According to the German magazine and website Der Spiegel, the circle of managers with direct knowledge of how the company falsified the emissions performance of its diesel vehicles is much wider than the company had so far indicated. Last week, Michael Horn, head of the company's U.S. operations, had told a Congressional committee that the decision to install "defeat devices" that masked the actual level of emissions was taken by a small group, and wasn't a corporate decision.

Der Spiegel cited company sources as saying that "at least 30 people" were involved in the scandal, and that the final number may be higher. Earlier this month, VW's board had commissioned law firm Jones Day LLC to conduct an investigation into the affair, promising a rigorous clean-up. Spiegel's story referred to the first preliminary findings of that investigation. These aren't being made public yet.

It wasn't clear whether the company had suspended any more employees. According to media reports, the senior R&D managers at the group's three leading brands, VW, Audi and Porsche, have all been suspended while the investigation goes on.

A spokesman for Volkswagen didn't immediately respond to a request for comment.

In separate news Wednesday, it emerged that Winfried Vahland, who was slated to take over as head of the VW group's new North American division, is to leave the company at his own request.

The new structure was unveiled at the first board meeting after the resignation of CEO Martin Winterkorn, and was aimed at devolving more power away from the group's headquarters in Germany.

Škoda, the low-end, Czech-based unit of VW which Vahland has run for the last five years, said "differing views on the organisation of the new Group region have led to this decision." It added that it is "expressly not related to current events on the issue of diesel engines."

Vahland had been with the VW group for 25 years, and had run Czech-based Škoda since 2010. Before that he had been head of VW's regional operations in China. According to some reports, Winterkorn had pressed for Vahland to succeed him as CEO.

After pollution scandal, Volkswagen to focus on electric vehicles

October 14th, 2015 by Associated Press

Volkswagen says it will shift its focus toward developing electric cars.

It aims to develop new hybrid and electric vehicles in response to its emissions scandal.

The new steps were part of a plan to confront the company's scandal over cars that were equipped with computer software that let them evade U.S. emissions tests.

Volkswagen division head Herbert Diess said in a statement Tuesday the company would change its approach to diesel emissions in Europe and North America and adopt so-called selective catalytic converter technology, or SCR. That is a system that injects the chemical substance urea into the exhaust stream to neutralize harmful nitrogen oxides.

He said that change would come "as soon as possible."

Diess also said the company would reduce spending on investments by 1 billion euros ($1.1billion) and redouble efforts to cut other costs.

Volkswagen will expand its modular construction system — which involves sharing technical specifications and parts across different models to save money — to include new plug-in hybrid and electric vehicles.

The company additionally plans to turn the next version of its large Phaeton luxury sedan into an electric-only vehicle to demonstrate the company's technological competence.

The Phaeton, a project introduced by former CEO Ferdinand Piech, has been criticized as a money-loser. The Piech and Porsche families own the majority of voting shares in Volkswagen through a holding company.

"The Volkswagen brand is repositioning itself for the future," Diess said in a statement. "We are becoming more efficient, we are giving our product range and our core technologies a new focus, and we are creating room for forward-looking technologies by speeding up the efficiency program."

Diess is a recent hire from competitor BMW, where he oversaw development of new models including the i3 electric and i8 plug-in hybrid vehicles.

Volkswagen AG, whose other brands include Audi and Skoda, is facing a crisis after U.S. authorities said it evaded emissions checks on 482,000 vehicles. The company has set aside 6.5 billion euros ($7.3 billion) to cover the costs of recalls and fines. But analysts say the costs in terms of fines and lost sales will likely be considerably higher.

Earlier, the governor of Germany's Lower Saxony state, which holds a 20 percent stake in Volkswagen, said the automaker should have admitted earlier that it manipulated emissions data in the U.S. Volkswagen acknowledged the deception to U.S. regulators on Sept. 3, more than a year after researchers published a study showing the real-world emissions of two VW models were far higher than allowed.

Governor Stephan Weil told Lower Saxony's state legislature on Tuesday that "this confession should clearly have come a great deal earlier — another serious mistake," news agency dpa reported.

Weil sits on Volkswagen's board of directors. He has said that the state's representatives were "completely surprised" by the emissions scandal and vowed to work to protect jobs.

Volkswagen North America Chief-Designate Quits

Winfied Vahland was head of Skoda brand

By SARAH SLOAT

Oct. 14, 2015 9:05 a.m. ET

FRANKFURT— Volkswagen AG parted ways with another senior executive Wednesday.

Winfried Vahland is leaving the company due to differences over the auto maker's North America organization, which he was poised to oversee.

The automotive group, in the grips an international emissions-testing scandal, had designated Mr. Vahland, currently the head of Volkswagen's Czech Republic-based Skoda brand, as the new chief of its North America business last month.

"This decision is expressly not related to current events on the issue of diesel engines," Skoda said in a statement. Skoda said Mr. Vahland is leaving at his own request.

Volkswagen has been in disarray since mid-September, when it admitted to using software in millions of diesel cars that allow them to run cleaner in emissions tests than on the road. The disclosure, which came first for cars sold in the U.S., triggered a boardroom reshuffle, a profit warning and cutbacks in investment spending.

The group's supervisory board elected Hans Dieter Pötsch, the company's 64-year-old chief financial officer, as chairman last week, filing a post left open since April when former patriarch Ferdinand Piëch resigned. Matthias Müller, head of Volkswagen's Porsche brand, had replaced Martin Winterkorn as Volkswagen's CEO after Mr. Winterkorn resigned last month in the wake of the diesel-engine scandal.

New Volkswagen North America chief Winfried Vahland out after three weeks

Nathan Bomey, USA TODAY 9:19 a.m. EDT October 14, 2015

Volkswagen's newly appointed head of North America is leaving the company less than three weeks after he was assigned to that position, injecting a new measure of instability as the company navigates an emissions scandal.

The sudden exit of Winfried Vahland gives the company's sweeping restructuring of its global operations a discombobulated feel, raising further questions about the future of its business in the U.S.

Vahland and Volkswagen had "differing views" on the company's new structure, the automaker said in a statement. His exit is "expressly not related" to the emissions scandal, VW said.

Vahland's swift appointment as head of the new North America region on Sept. 25 was billed as critical to creating a cohesive strategy for Volkswagen in one of the company's few weak spots. It came just a week after the U.S. Environmental Protection Agency exposed the fact that Volkswagen had installed software on vehicles to cheat emissions tests.

The company's U.S. chief, Michael Horn, who was set to report to Vahland, is staying in his current role.

Volkswagen did not immediately name a successor for Vahland, who also led Volkswagen's China operation for a period and was most recently chairman of the Skoda brand.

"In the last 25 years, Professor Vahland made a great contribution to the company," Volkswagen Group CEO Matthias Mueller said in a statement. "We respect his decision and thank him for his exceptional performance."

AP

Recently named head of VW North America will not take post

By DAVID McHUGH and TOM KRISHER

Oct. 14, 2015 9:38 AM EDT

FRANKFURT, Germany (AP) — The recently named head of Volkswagen's North American business won't be taking up his new job - and has left the company.

The announcement comes as Volkswagen faces a scandal over rigging the results of emissions testing of its diesel vehicles in the U.S. It means that one of the company's most experienced managers will not be coming to lead the company's response in the United States as it faces possible heavy fines from the Environmental Protection Agency.

Volkswagen's Skoda division made the announcement about its chairman, Winfried Vahland, in a news release on Wednesday.

The release said that Vahland will not be moving to take over his new position carrying overall responsibility for North America. It said his decision to quit was not related to the scandal over the diesel engines.

On Sept. 24, Volkswagen announced a reorganization of its North American operations that put Vahland over country executives including Volkswagen's U.S. chief, Michael Horn. The announcement came the same day Volkswagen named Matthias Mueller as CEO after Martin Winterkorn stepped down from the job.

VW had said Horn would remain as president and CEO of Volkswagen Group of America, but its U.S., Canada and Mexico markets will be "combined and significantly strengthened" to form a new "North America region" led by Vahland.

Vahland, the former head of VW's crucial China business, was leaving because of "differing views on the organization of the new group region."

Mueller thanked him for 25 years of service and a "great contribution to the company."

"We respect his decision and thank him for his exceptional performance," Mueller was quoted as saying in the Skoda statement.

Skoda, based in the Czech Republic, is one of VW's brands, which also include Audi, SEAT, Lamborghini and Bentley.

Forbes:

http://www.forbes.com/sites/beltway/2015/10/13/how-a-carbon-tax-could-have-prevented-the-volkswagen-diesel-scandal/2/

How A Carbon Tax Could Have Prevented The Volkswagen Diesel Scandal

Howard Gleckman, CONTRIBUTOR

If anyone needed another example of why a carbon tax is a good idea, look no further than Volkswagen's diesel scandal. The automaker's efforts to game the current system are a case study in what's wrong with government attempts to reduce pollution with regulation and tax subsidies, rather than through a relatively straight-forward tax on carbon-based fuels.

The current system is complex mix of environmental carrots and sticks. The sticks include regulation such as fuel economy standards. The carrots include tax subsidies. One was the (now-expired) alternative motor vehicle tax credit that was available to specific models that met detailed fuel economy requirements. Two models of VW Jettas qualified for credits of $1,300 and the LA Times reported in September that the government paid as much as $51 million in credits to buyers of VW diesel cars.

Unable to limit emissions, give consumers the high performance they want, and meet fuel economy standards, VW cheated. As you know by now, the firm installed software in its diesel cars designed to fool routine emissions tests—which made the cars appear "cleaner" than they really were. In all, VW reportedly sold 500,000 cars in the US from 2009-2015 with the rogue software. Here is a helpful description from Vox explaining the whole sad story.

VW eventually got caught, of course. It faces penalties from EPA and potential criminal charges for violating the False Claims Act, as well as an investigation by the Senate Finance Committee. CEO Martin Winterkorn has resigned and the firm has stopped selling diesel cars in the US.

Still, a lot of this mess could have been avoided with a carbon tax. Such a levy could replace many—though not all– of these complex rules and eliminate most incentives for gaming. A carbon tax would not help reduce local air pollutants such as NOx so it would not replace all auto pollution regulations. But it could supplant those that aim to reduce carbon emissions from vehicles.

For drivers, the choice would be relative simply: You buy a carbon-based fuel, you pay a tax. The more carbon in the fuel, the more tax you pay. The manufacturer wouldn't need to hit a mandated fuel economy standard. No-one would need to worry about conflicting regulations.

Instead, consumers would likely respond to higher taxes by demanding cars that, one way or another, use less carbon-based fuel. We have lots of evidence that consumers are extremely responsive to changes in gasoline prices—the price goes up, they buy Priuses; it goes down, they switch to less fuel-efficient vehicles.

And with a big carbon tax, manufacturers will probably respond to consumer demands by

producing low-carbon vehicles. The proof will be at the pump. If an automaker lies about its fuel efficiency, it will be immediately obvious: Consumers will be filling up their tanks more often than they expected. And government won't have to test carbon emissions from tens of millions of cars. It will just need to calculate the carbon content of their fuel.

There is one other classic argument for corrective taxes such as a carbon tax. Such a levy provides ongoing incentives for firms to enhance technology and continue to drive down emissions. But with regulation or subsidies, even honest producers are more likely to hit the mandated target—and stop.

This is not to suggest that carbon taxes are not without their own complex issues. My Tax Policy Center colleagues Donald Marron and Eric Toder have described some of the technical challenges. But overall, market mechanisms such as carbon taxes (or a cap-and-trade system) are far more efficient, and much less prone to cheating, than a system based on regulations and subsidies.

Bloomberg:

http://www.bloomberg.com/news/articles/2015-10-14/volkswagen-s-designated-north-america-chief-leaves-carmaker

Volkswagen's Designated North America Chief Leaves Carmaker

Christoph Rauwald

October 14, 2015 — 8:58 AM EDT

Volkswagen AG's designated North America chief turned down the job in the wake of a management revamp triggered by the diesel-emissions scandal.

Winfried Vahland, a company veteran who currently leads VW's Czech Skoda unit, decided to not take over the new post as had been planned and will leave the carmaker, Skoda said in an e-

mailed statement.

Vahland was among the candidates to succeed former VW Chief Executive Officer Martin Winterkorn, who resigned last month, but the supervisory board favored former Porsche chief Matthias Mueller. Vahland is leaving Wolfsburg, Germany-based Volkswagen at his own request. His departure is unrelated to the investigations into the rigging of millions of diesel engines worldwide, Skoda said in the statement.

Volkswagen said Tuesday it will reduce annual investment by about 1 billion euros ($1.1 billion) at its namesake car brand as the automaker steps up a cost-cutting push to weather the impact of the diesel-emissions scandal.

VW is under increasing financial strain following revelations last month that it rigged diesel engines to circumvent emissions regulations. The company set aside 6.5 billion euros for repairs and to compensate customers, but has said that won't be enough. VW faces numerous lawsuits in the U.S., where it has lost money and struggled to become more than an also-ran despite rapid expansion elsewhere.

Vahland was appointed head of VW's North American operations as part of a restructuring plan pushed by Mueller and meant to shift more responsibility to brand and regional managers. VW wasn't immediately available to comment on whether it still planned to fill the post.

Business Insider:

http://www.businessinsider.com/r-bosch-sees-diesel-market-so-far-unharmed-by-volkswagen-scandal-2015-10

Bosch sees diesel market so far unharmed by Volkswagen scandal

RENNINGEN, Germany (Reuters) - German automotive supplier Robert Bosch [ROBG.UL] has

not seen any change so far in the diesel car market as a result of an emissions scandal that has rocked Volkswagen , its chief executive said on Wednesday.

"It will depend, though, on an active campaign for diesel to quickly dispel the current uncertainty that many consumers are feeling," Volkmar Denner told reporters at the opening of a new research center in the German town of Renningen near Stuttgart.

German Economy Minister Sigmar Gabriel warned against condemning diesel technology overall but said Germany needed to do better in switching to alternative engines.

He said he favored introducing incentives to reduce the price difference between electric and conventional cars.

Volkswagen, Europe's largest carmaker, last month admitted to cheating U.S. diesel emissions tests, sparking a crisis that unseated its CEO and wiped around a quarter off its market value.

Bosch is the maker of a popular diesel engine management program used by several top automakers including VW, which U.S. officials said last week was not preprogrammed to detect when a vehicle was undergoing laboratory emissions testing.

But it is not clear what role Bosch played, how closely it worked with VW to modify the engine management software and how much it knew about VW's intentions to use software to cheat on emissions standards.

Denner declined to comment on the matter.

He added that VW had not started talks to demand lower prices, following a media report that VW planned to extract 3 billion euros in price cuts from its suppliers to help mitigate the costs of the scandal.

Detroit News:

http://www.detroitnews.com/story/business/autos/2015/10/13/ann-arbor-epa-lab-diesel-tests-vw-scandal/73888296/

Ann Arbor EPA lab tests other cars after VW scandal

Michael Martinez, The Detroit News 5:05 p.m. EDT October 13, 2015

Ann Arbor — The Environmental Protection Agency on Tuesday said it's begun testing other automakers' vehicles in the wake of Volkswagen AG's massive diesel-testing scandal. Some of those tests are being done at the agency's emissions testing lab in Ann Arbor.

Janet McCabe, assistant administrator of the EPA's office of air and radiation, said the agency is "upping our game" following VW's admission last month that it cheated on emissions tests for more than 11 million diesel cars worldwide. The EPA said late last month it would conduct more spot checks of light-duty cars and trucks, testing vehicles owned by individuals and rental companies in real-world driving conditions. The EPA also could take cars from manufacturers' assembly lines.

"We're focused on diesel right now, but ... we're becoming the unpredictable EPA, so we'll be testing a range of vehicles with a range of configurations and situations," McCabe told reporters at a Wednesday technology showcase event.

The EPA sent letters to automakers late last month, warning that it will take further steps to prevent fraud. New safeguards will "detect any kind of defeat devices" that might turn off pollution-control equipment, Chris Grundler, the head of the EPA's office of transportation and air quality, said. He called the new tests part of an "evolution" of enforcement.

McCabe declined to say if the agency discovered that any other automakers have used defeat devices. "When we finish that process we'll be able to talk about the results," she said.

The California Air Resources Board and Environment Canada also are conducting real-world vehicle emissions testing, and all three facilities plan to share the results.

McCabe said the EPA isn't necessarily looking at software that could potentially trigger the defeat devices, which VW used to evade tests on its diesel vehicles.

"Our focus is on what's coming out of the tailpipe, which is how our standards are set and what the cars need to be measured up against," she said. "What we're focused on is whether they meet the standards that are in our rules."

McCabe was in Ann Arbor Wednesday to celebrate the launch of the EPA's new heavy-duty truck chassis dynamometer, a $3 million piece of equipment built in Germany that allows the agency to perform emissions tests on full-size heavy-duty trucks. Previously, the EPA had to spend about a week removing truck engines to run the tests.

The new dynamometer is housed in part of the agency's 200,000-square-foot National Vehicle & Fuel Emissions lab in Ann Arbor. The lab includes a number of emissions testing rooms that run simulations on cars, trucks and even small equipment like lawn mowers in a wide range of climates and conditions

EPA hasn't decided if new software on 2016 VW diesels is legal

ANN ARBOR, MICH. | BY PAUL LIENERT

U.S. regulators haven't determined the legality of a new emission-control device on Volkswagen's (VOWG_p.DE) 2016 diesel models, a top official said on Tuesday.

Those models still have not been certified for sale by the U.S. Environmental Protection Agency.

The existence of the new software was made public last week by VW's top U.S. executive in testimony to a congressional subcommittee investigating the German automaker's diesel cheating scandal.

The company has not confirmed speculation that the new software was configured before the wider emissions scandal broke on Sept. 18.

"We have a long list of questions for VW," said EPA Assistant Administrator Janet McCabe at a media briefing here. "When we have all of the answers, we will be able to make a determination" on the whether the device is legal or considered to be a "defeat device" designed to circumvent U.S. emission rules.

VW last month admitted that it installed illegal software on its 2009-2015 U.S. diesel models that enabled the cars to pass laboratory tests, but dump higher-than-legal limits of pollutants in real-world driving.

VW told regulators only recently that some of its U.S. diesel models included a previously undisclosed software feature that could affect emission controls on the 2016 models, according to Michael Horn, president and CEO of Volkswagen Group of America. Horn told U.S. lawmakers last week that the company subsequently had withdrawn its application for EPA certification of its 2016 diesel models.

Asked for additional detail, a VW spokesperson on Monday said the software "has the function of a warmup strategy which is subject to approval" by EPA. Typical diesel emission control systems are designed to be most effective when the engine is warmed up.

The EPA defines such software as an "auxiliary emission control device," or AECD, and describes it as any device that can change the operation of the vehicle's emission control system.

The agency also requires automakers to disclose the existence of such a software device, including "a rationale for why it is not a defeat device."

VW on Monday said the EPA is evaluating the new software device, and that the automaker is "working with the regulators to continue the 2016 certification process" for VW vehicles equipped with the 2.0-liter diesel engine.

Volkswagen Lobbied Obama Administration For Green Tax Credits

STEVE BIRR

11:41 AM 10/13/2015

As President Barack Obama pushed his green energy proposals for the auto-industry in 2011, Volkswagen was lobbying the administration for tax credits on its now tainted line of diesel vehicles.

Volkswagen wanted a green tax credit that applies to electric cars to be given to their diesel line as well. The Environmental Protection Agency, however, refused to go along with Volkswagen's plan and also declined Toyota's request to apply the same tax credit to their hybrid electric cars.

EPA documents from 2009 and 2010 show that Volkswagen supported the Obama administration's plan to reduce carbon dioxide emissions from automobiles. Former VW CEO Stefan Jacoby wrote to the EPA in 2010 praising their "leadership on this important subject." Jacoby, along with the EPA and other auto-makers, said they would "aim to make substantial annual progress in reducing transportation sector greenhouse gas emissions and fossil fuel consumption consistent with the Obama Administration's energy and climate security goals."

While Volkswagen was publicly backing White House efforts to tackle global warming and push green vehicles, the automaker was quietly lobbying behind the scenes to get government subsidies — the political price for the company's support of Obama's agenda. But the EPA refused to play ball, and Volkswagen withdrew its support for Obama's green vehicle push, according to The New York Times.

Margo Oge, the former director of the EPA Office of Transportation and Air Quality who worked closely with auto-makers on these proposals, told The New York Times that Volkswagen "wanted a special deal for diesel cars that we now know weren't even meeting the standard." Oge suggested that Volkswagen thought their diesel technology was superior to electric or hybrid alternatives, saying, "These people had religion, and that religion was diesel."

When Obama announced his plan to reduce carbon dioxide emissions from cars, Volkswagen was one of the only major automakers to not sign a letter of support for the president's agenda. The New York Times reports that much of this attitude came from overseas.

"My sense was that things were being dictated by Germany," said Oge.

Without a tax credit or subsidy, Volkswagen was going to have a tougher time meeting regulatory standards on emissions while still being able to advertise their diesel vehicles' good fuel economy and relatively low price. These reasons might have played a role in Volkswagen using "defeat devices" to get around EPA emissions tests.

Despite Volkswagen's efforts to get government assistance for their diesel line, their lobbying footprint in America remains relatively small, which could hurt them as this scandal moves forward. Volkswagen spent just $1.2 million on lobbying in 2014, a number dwarfed by General Motors which spends an average of $8.5 million a year on lobbying.

GM just recently settled with the government over the fact that they knowingly hid information about a faulty ignition switch that was linked directly to the deaths of 174 people. They were fined only $900 million and no one at GM was ever charged. Volkswagen currently faces up to $18 billion in potential fines.

There was this article (and I think a few more) from last week that mentioned the AECD:

NY Times:

http://www.nytimes.com/2015/10/09/business/international/vw-diesel-emissions-scandal-congressional-hearing.html?_r=0

Regulators Investigating 2nd VW Computer Program on Emissions

By DANIELLE IVORY and KEITH BRADSHEROCT. 8, 2015

WASHINGTON — Federal and California regulators have begun an investigation into a second computer program in Volkswagen's diesel cars that also affects the operation of the cars' emission controls.

Volkswagen said that it had withdrawn 2016 models of its diesel cars from environmental certification in the United States because the company should have disclosed the software and sought regulators' approval, but had not done so.

The disclosure of the software was made in testimony by the head of Volkswagen's American unit, Michael Horn, before a House Energy and Commerce subcommittee hearing, and later confirmed by the Environmental Protection Agency and the California Air Resources Board.

The software qualifies under state and federal laws as a so-called auxiliary emissions control device — something that modifies the performance of emissions equipment. Volkswagen and regulators declined to say whether this software was intended to defeat emissions control tests, like the software that the automaker already admitted last month that it had installed in 11 million diesel cars since the 2009 model year.

"VW did very recently provide E.P.A. with very preliminary information on an auxiliary emissions control device that VW said was included in one or more model years," said Nick Conger, an agency spokesman. He added that federal and California regulators "are investigating the nature and purpose of this recently identified device."

Volkswagen is already struggling with the spiraling cost and growing damage to its image from last month's revelation that it had installed software to detect when a car was undergoing an emissions test and minimize harmful emissions. When not being tested, the cars would emit up to 40 times the allowable levels of pollution.

Volkswagen and regulators refrained from characterizing the second software program in any way. The automaker gave no indication of whether it was also devised to defeat emissions tests.

"In Volkswagen Group of America's recent discussions with the regulators, we described to the E.P.A. and C.A.R.B. that our emissions control strategy also included a software feature that should be disclosed to and approved by them," the automaker said.

Stanley Young, a spokesman for the California Air Resources Board, said the state agency was investigating the nature of the second device, but declined to provide specifics because Volkswagen's application "is still pending." Mr. Young said that while Volkswagen has withdrawn its 2016 application with federal regulators, it has not withdrawn the similar application filed with California regulators.

"We're still going through all the information they provided and determining the next step," he said.

Under normal circumstances, automakers are allowed to use the auxiliary emissions control devices under deals negotiated with regulators that provide for higher emissions in very specific circumstances (like going up a steep hill, or in very cold weather). But they must be disclosed.

Mr. Young said he could not comment on exactly when Volkswagen disclosed the existence of its auxiliary emissions control device, or A.E.C.D.

"What we don't know yet is if the 2016 A.E.C.D. is also a defeat device, or is a device that meets the guidance previously given by E.P.A.," said John German, a senior fellow specializing in emissions and efficiency technology at the International Council on Clean Transportation, the nonprofit group that first noticed that the real-world emissions of Volkswagen diesels in the United States were far above regulatory limits.

Federal regulators warned manufacturers of heavy-duty trucks in 1998 that it would strictly scrutinize any devices that interfered with the normal operation of emissions control equipment, after finding that they had installed systems similar to what Volkswagen disclosed last month in its diesel cars.

Dan Becker, the director of the Safe Climate Campaign at the Center for Auto Safety, a nonprofit Washington research group, said that Volkswagen's new admission was a potential violation of the law.

"They put it in their vehicles, and then they signed a certification petition to the regulator saying what they put in their vehicles and didn't mention it," he said. "It's certainly a material omission."

Lawmakers did not discuss Volkswagen's admission at length during the hearing. But Representative Fred Upton, Republican of Michigan, openly wondered if Volkswagen was skirting regulations in other ways. "If they were willing to cut corners here, what else have they done?" he asked.

In addition to disclosing the second investigation in his opening testimony, Mr. Horn of Volkswagen laid out the automaker's plans to fix the cars currently affected and cautioned the panel that owners might have to wait a year or two.

Most of the more than 480,000 affected cars in the United States will need a "major fix," he said, including a hardware and software change. That repair, which would be applicable to almost 70 percent of those vehicles, may consume as much as 10 hours of work per car and might not get started until next year. The remaining vehicles are expected to be fixed next year, he said.

"This is pretty shocking for people," said Representative Jan Schakowsky, a Democrat of Illinois, expressing dismay at the scandal and demanding a specific timeline for fixes. "Asking customers for patience is really just not sufficient."

Some lawmakers asked Mr. Horn why Volkswagen did not replace the vehicles — a costly proposition — and, although he emphasized repairs, he said Volkswagen might consider an option like a buyback.

"Our plan is not to buy back the inventory," he said. "Our plan is to fix the cars."

2016 VW diesels have new software affecting emissions tests

Posted: Wednesday, October 14, 2015 10:15 am

WASHINGTON (AP) — Volkswagen has disclosed to U.S. regulators that there is additional suspect software in its 2016 diesel models that would potentially help their exhaust systems run cleaner during government tests.

Volkswagen confirmed to The Associated Press that the "auxiliary emissions control device" at issue operates differently from the "defeat" device software included in the company's 2009 to 2015 models disclosed last month. That disclosure triggered the worldwide cheating scandal engulfing the world's largest automaker.

The newly revealed software makes a pollution control catalyst heat up faster, improving performance of the device that separates smog-causing nitrogen oxide into harmless nitrogen and oxygen gases.

VW spokeswoman Jeannine Ginivan said the new issue with the 2016 vehicles was first revealed last week to U.S. Environmental Protection Agency and California regulators.

"Volkswagen has disclosed, in the application process for the model year 2016 2.0 TDI models, an auxiliary emissions control device," Ginivan said. "This has the function of a warmup strategy

which is subject to approval by the agencies. The agencies are currently evaluating this and Volkswagen is submitting additional information."

AP first reported last week that the EPA and California Air Resources Board are investigating "the nature and purpose" of additional software on the new VW models. Regulators have not yet determined whether the code is a defeat device installed specifically to cheat on emissions tests, said Janet McCabe, acting assistant EPA administrator for air quality.

"We have a long list of questions for VW about this," she said Tuesday at a dedication ceremony for a new heavy-duty truck testing lab in Ann Arbor, Michigan. "We're getting some answers from them, but we do not have all the answers yet."

Volkswagen already faced an ongoing criminal investigation and billions in fines for violating the Clean Air Act for its earlier emissions cheat, as well as a raft of state investigations and class-action lawsuits filed on behalf of customers.

If it is determined the new issue is a second defeat device, that would call into question recent assertions by top VW executives that responsibility for the cheating scheme lay with a handful of rogue software developers who wrote the original code installed with the company's diesel engines starting with the 2009 model year.

The separate device included in the redesigned 2016 cars would appear to suggest a multi-year effort by the company to influence U.S. emissions tests that continued even after regulators began pressing the company last year about irregularities with the emissions produced by the older cars.

A congressional staffer briefed on the issue last week told AP that VW probably didn't need the additional software to meet government emissions standards, but that the device appears intended to ensure the 2016 cars would pass by wider margins. The staffer spoke on the condition of anonymity because he was not authorized to talk publicly about the ongoing investigation.

The company's most senior U.S.-based executive announced in congressional testimony last week that the German automaker had withdrawn applications seeking certification of its 2016 diesels because of on-board software that hadn't been disclosed to regulators.

However, the statement by Volkswagen of America CEO Michael Horn left unclear whether the issue with the 2016 models was the same as that in the earlier models, or whether it potentially constituted a new violation. Manufacturers are required by law to disclose any devices affecting emissions controls as part of the process to receive the EPA certifications required to sell the cars in the country.

EPA's McCabe wouldn't say if VW's failure to disclose the software in its 2016 application for emissions certification was illegal. "I don't want to speak to any potential subjects of an enforcement activity," she said.

VW is now working with regulators to continue the certification process needed to sell the 2016 diesel cars.

The delay is bad news for Volkswagen dealers, who had been anticipating delivery of the new models to replace older inventory which they can no longer offer to customers. Thousands of 2016 Beetles, Golfs, Jettas and Passats will remain quarantined in U.S. ports until a fix can be developed, approved and carried out.

Matthew Daly contributed from Washington. Krisher reported from Ann Arbor, Michigan.

http://fortune.com/2015/10/14/dozens-of-managers-implicated-in-volkswagen-scandal/

"Dozens" of managers implicated in Volkswagen scandal

by Geoffrey Smith

OCTOBER 14, 2015, 10:37 AM EDT

And there's more woe for VW as the designated head of its new North America region refuses to take up post.

The external investigation that Volkswagen AG VLKAY 0.41% commissioned is making alarmingly quick (and leaky) progress.

According to the German magazine and website Der Spiegel, the circle of managers with direct knowledge of how the company falsified the emissions performance of its diesel vehicles is much wider than the company had so far indicated. Last week, Michael Horn, head of the company's U.S. operations, had told a Congressional committee that the decision to install "defeat devices" that masked the actual level of emissions was taken by a small group, and wasn't a corporate decision.

Der Spiegel cited company sources as saying that "at least 30 people" were involved in the scandal, and that the final number may be higher. Earlier this month, VW's board had commissioned law firm Jones Day LLC to conduct an investigation into the affair, promising a rigorous clean-up. Spiegel's story referred to the first preliminary findings of that investigation. These aren't being made public yet.

It wasn't clear whether the company had suspended any more employees. According to media reports, the senior R&D managers at the group's three leading brands, VW, Audi and Porsche, have all been suspended while the investigation goes on.

A spokesman for Volkswagen didn't immediately respond to a request for comment.

In separate news Wednesday, it emerged that Winfried Vahland, who was slated to take over as head of the VW group's new North American division, is to leave the company at his own request.

The new structure was unveiled at the first board meeting after the resignation of CEO Martin Winterkorn, and was aimed at devolving more power away from the group's headquarters in Germany.

Škoda, the low-end, Czech-based unit of VW which Vahland has run for the last five years, said "differing views on the organisation of the new Group region have led to this decision." It added that it is "expressly not related to current events on the issue of diesel engines."

Vahland had been with the VW group for 25 years, and had run Czech-based Škoda since 2010. Before that he had been head of VW's regional operations in China. According to some reports, Winterkorn had pressed for Vahland to succeed him as CEO.

After pollution scandal, Volkswagen to focus on electric vehicles

October 14th, 2015 by Associated Press

The all-new Chattanooga built VW Passat TDI cruises on East Brow Road atop Signal Mountain early Wednesday afternoon. Staff photo by Dan Henry/Chattanooga Times Free Press

Volkswagen says it will shift its focus toward developing electric cars.

It aims to develop new hybrid and electric vehicles in response to its emissions scandal.

The new steps were part of a plan to confront the company's scandal over cars that were equipped with computer software that let them evade U.S. emissions tests.

Volkswagen division head Herbert Diess said in a statement Tuesday the company would change its approach to diesel emissions in Europe and North America and adopt so-called selective catalytic converter technology, or SCR. That is a system that injects the chemical substance urea into the exhaust stream to neutralize harmful nitrogen oxides.

He said that change would come "as soon as possible."

Diess also said the company would reduce spending on investments by 1 billion euros ($1.1billion) and redouble efforts to cut other costs.

Volkswagen will expand its modular construction system — which involves sharing technical specifications and parts across different models to save money — to include new plug-in hybrid and electric vehicles.

The company additionally plans to turn the next version of its large Phaeton luxury sedan into an electric-only vehicle to demonstrate the company's technological competence.

The Phaeton, a project introduced by former CEO Ferdinand Piech, has been criticized as a money-loser. The Piech and Porsche families own the majority of voting shares in Volkswagen through a holding company.

"The Volkswagen brand is repositioning itself for the future," Diess said in a statement. "We are becoming more efficient, we are giving our product range and our core technologies a new focus,

and we are creating room for forward-looking technologies by speeding up the efficiency program."

Diess is a recent hire from competitor BMW, where he oversaw development of new models including the i3 electric and i8 plug-in hybrid vehicles.

Volkswagen AG, whose other brands include Audi and Skoda, is facing a crisis after U.S. authorities said it evaded emissions checks on 482,000 vehicles. The company has set aside 6.5 billion euros ($7.3 billion) to cover the costs of recalls and fines. But analysts say the costs in terms of fines and lost sales will likely be considerably higher.

Earlier, the governor of Germany's Lower Saxony state, which holds a 20 percent stake in Volkswagen, said the automaker should have admitted earlier that it manipulated emissions data in the U.S. Volkswagen acknowledged the deception to U.S. regulators on Sept. 3, more than a year after researchers published a study showing the real-world emissions of two VW models were far higher than allowed.

Governor Stephan Weil told Lower Saxony's state legislature on Tuesday that "this confession should clearly have come a great deal earlier — another serious mistake," news agency dpa reported.

Weil sits on Volkswagen's board of directors. He has said that the state's representatives were "completely surprised" by the emissions scandal and vowed to work to protect jobs.

Volkswagen North America Chief-Designate Quits

Winfied Vahland was head of Skoda brand

By SARAH SLOAT

Oct. 14, 2015 9:05 a.m. ET

FRANKFURT— Volkswagen AG parted ways with another senior executive Wednesday. Winfried Vahland is leaving the company due to differences over the auto maker's North America organization, which he was poised to oversee.

The automotive group, in the grips an international emissions-testing scandal, had designated Mr. Vahland, currently the head of Volkswagen's Czech Republic-based Skoda brand, as the new chief of its North America business last month.

"This decision is expressly not related to current events on the issue of diesel engines," Skoda said in a statement. Skoda said Mr. Vahland is leaving at his own request.

Volkswagen has been in disarray since mid-September, when it admitted to using software in millions of diesel cars that allow them to run cleaner in emissions tests than on the road. The disclosure, which came first for cars sold in the U.S., triggered a boardroom reshuffle, a profit warning and cutbacks in investment spending.

The group's supervisory board elected Hans Dieter Pötsch, the company's 64-year-old chief financial officer, as chairman last week, filing a post left open since April when former patriarch Ferdinand Piëch resigned. Matthias Müller, head of Volkswagen's Porsche brand, had replaced Martin Winterkorn as Volkswagen's CEO after Mr. Winterkorn resigned last month in the wake of the diesel-engine scandal.

New Volkswagen North America chief Winfried Vahland out after three weeks

Nathan Bomey, USA TODAY 9:19 a.m. EDT October 14, 2015

Volkswagen's newly appointed head of North America is leaving the company less than three weeks after he was assigned to that position, injecting a new measure of instability as the company navigates an emissions scandal.

The sudden exit of Winfried Vahland gives the company's sweeping restructuring of its global operations a discombobulated feel, raising further questions about the future of its business in the U.S.

Vahland and Volkswagen had "differing views" on the company's new structure, the automaker said in a statement. His exit is "expressly not related" to the emissions scandal, VW said.

Vahland's swift appointment as head of the new North America region on Sept. 25 was billed as critical to creating a cohesive strategy for Volkswagen in one of the company's few weak spots. It came just a week after the U.S. Environmental Protection Agency exposed the fact that Volkswagen had installed software on vehicles to cheat emissions tests.

The company's U.S. chief, Michael Horn, who was set to report to Vahland, is staying in his current role.

Volkswagen did not immediately name a successor for Vahland, who also led Volkswagen's China operation for a period and was most recently chairman of the Skoda brand.

"In the last 25 years, Professor Vahland made a great contribution to the company," Volkswagen Group CEO Matthias Mueller said in a statement. "We respect his decision and thank him for his exceptional performance."

AP

Recently named head of VW North America will not take post

By DAVID McHUGH and TOM KRISHER

Oct. 14, 2015 9:38 AM EDT

FRANKFURT, Germany (AP) — The recently named head of Volkswagen's North American business won't be taking up his new job - and has left the company.

The announcement comes as Volkswagen faces a scandal over rigging the results of emissions testing of its diesel vehicles in the U.S. It means that one of the company's most experienced managers will not be coming to lead the company's response in the United States as it faces possible heavy fines from the Environmental Protection Agency.

Volkswagen's Skoda division made the announcement about its chairman, Winfried Vahland, in a news release on Wednesday.

The release said that Vahland will not be moving to take over his new position carrying overall responsibility for North America. It said his decision to quit was not related to the scandal over the diesel engines.

On Sept. 24, Volkswagen announced a reorganization of its North American operations that put Vahland over country executives including Volkswagen's U.S. chief, Michael Horn. The announcement came the same day Volkswagen named Matthias Mueller as CEO after Martin Winterkorn stepped down from the job.

VW had said Horn would remain as president and CEO of Volkswagen Group of America, but its U.S., Canada and Mexico markets will be "combined and significantly strengthened" to form a new "North America region" led by Vahland.

Vahland, the former head of VW's crucial China business, was leaving because of "differing views on the organization of the new group region."

Mueller thanked him for 25 years of service and a "great contribution to the company."

"We respect his decision and thank him for his exceptional performance," Mueller was quoted as saying in the Skoda statement.

Skoda, based in the Czech Republic, is one of VW's brands, which also include Audi, SEAT, Lamborghini and Bentley.

Forbes:

http://www.forbes.com/sites/beltway/2015/10/13/how-a-carbon-tax-could-have-prevented-the-volkswagen-diesel-scandal/2/

How A Carbon Tax Could Have Prevented The Volkswagen Diesel Scandal

Howard Gleckman, CONTRIBUTOR

If anyone needed another example of why a carbon tax is a good idea, look no further than Volkswagen's diesel scandal. The automaker's efforts to game the current system are a case study in what's wrong with government attempts to reduce pollution with regulation and tax subsidies, rather than through a relatively straight-forward tax on carbon-based fuels.

The current system is complex mix of environmental carrots and sticks. The sticks include regulation such as fuel economy standards. The carrots include tax subsidies. One was the (now-expired) alternative motor vehicle tax credit that was available to specific models that met detailed fuel economy requirements. Two models of VW Jettas qualified for credits of $1,300 and the LA Times reported in September that the government paid as much as $51 million in credits to buyers of VW diesel cars.

Unable to limit emissions, give consumers the high performance they want, and meet fuel economy standards, VW cheated. As you know by now, the firm installed software in its diesel cars designed to fool routine emissions tests—which made the cars appear "cleaner" than they really were. In all, VW reportedly sold 500,000 cars in the US from 2009-2015 with the rogue software. Here is a helpful description from Vox explaining the whole sad story.

VW eventually got caught, of course. It faces penalties from EPA and potential criminal charges for violating the False Claims Act, as well as an investigation by the Senate Finance Committee. CEO Martin Winterkorn has resigned and the firm has stopped selling diesel cars in the US.

Still, a lot of this mess could have been avoided with a carbon tax. Such a levy could replace many—though not all– of these complex rules and eliminate most incentives for gaming. A carbon tax would not help reduce local air pollutants such as NOx so it would not replace all auto pollution regulations. But it could supplant those that aim to reduce carbon emissions from vehicles.

For drivers, the choice would be relative simply: You buy a carbon-based fuel, you pay a tax. The more carbon in the fuel, the more tax you pay. The manufacturer wouldn't need to hit a mandated fuel economy standard. No-one would need to worry about conflicting regulations.

Instead, consumers would likely respond to higher taxes by demanding cars that, one way or another, use less carbon-based fuel. We have lots of evidence that consumers are extremely responsive to changes in gasoline prices—the price goes up, they buy Priuses; it goes down, they switch to less fuel-efficient vehicles.

And with a big carbon tax, manufacturers will probably respond to consumer demands by producing low-carbon vehicles. The proof will be at the pump. If an automaker lies about its fuel efficiency, it will be immediately obvious: Consumers will be filling up their tanks more often than they expected. And government won't have to test carbon emissions from tens of millions of cars. It will just need to calculate the carbon content of their fuel.

There is one other classic argument for corrective taxes such as a carbon tax. Such a levy provides ongoing incentives for firms to enhance technology and continue to drive down emissions. But with regulation or subsidies, even honest producers are more likely to hit the mandated target—and stop.

This is not to suggest that carbon taxes are not without their own complex issues. My Tax Policy Center colleagues Donald Marron and Eric Toder have described some of the technical challenges. But overall, market mechanisms such as carbon taxes (or a cap-and-trade system) are far more efficient, and much less prone to cheating, than a system based on regulations and subsidies.

Volkswagen's Designated North America Chief Leaves Carmaker

Christoph Rauwald

October 14, 2015 — 8:58 AM EDT

Volkswagen AG's designated North America chief turned down the job in the wake of a management revamp triggered by the diesel-emissions scandal.

Winfried Vahland, a company veteran who currently leads VW's Czech Skoda unit, decided to not take over the new post as had been planned and will leave the carmaker, Skoda said in an e-mailed statement.

Vahland was among the candidates to succeed former VW Chief Executive Officer Martin Winterkorn, who resigned last month, but the supervisory board favored former Porsche chief Matthias Mueller. Vahland is leaving Wolfsburg, Germany-based Volkswagen at his own request. His departure is unrelated to the investigations into the rigging of millions of diesel engines worldwide, Skoda said in the statement.

Volkswagen said Tuesday it will reduce annual investment by about 1 billion euros ($1.1 billion) at its namesake car brand as the automaker steps up a cost-cutting push to weather the impact of the diesel-emissions scandal.

VW is under increasing financial strain following revelations last month that it rigged diesel engines to circumvent emissions regulations. The company set aside 6.5 billion euros for repairs and to compensate customers, but has said that won't be enough. VW faces numerous lawsuits in the U.S., where it has lost money and struggled to become more than an also-ran despite rapid expansion elsewhere.

Vahland was appointed head of VW's North American operations as part of a restructuring plan pushed by Mueller and meant to shift more responsibility to brand and regional managers. VW wasn't immediately available to comment on whether it still planned to fill the post.

Business Insider:

http://www.businessinsider.com/r-bosch-sees-diesel-market-so-far-unharmed-by-volkswagen-

scandal-2015-10

Bosch sees diesel market so far unharmed by Volkswagen scandal

RENNINGEN, Germany (Reuters) - German automotive supplier Robert Bosch [ROBG.UL] has not seen any change so far in the diesel car market as a result of an emissions scandal that has rocked Volkswagen , its chief executive said on Wednesday.

"It will depend, though, on an active campaign for diesel to quickly dispel the current uncertainty that many consumers are feeling," Volkmar Denner told reporters at the opening of a new research center in the German town of Renningen near Stuttgart.

German Economy Minister Sigmar Gabriel warned against condemning diesel technology overall but said Germany needed to do better in switching to alternative engines.

He said he favored introducing incentives to reduce the price difference between electric and conventional cars.

Volkswagen, Europe's largest carmaker, last month admitted to cheating U.S. diesel emissions tests, sparking a crisis that unseated its CEO and wiped around a quarter off its market value.

Bosch is the maker of a popular diesel engine management program used by several top automakers including VW, which U.S. officials said last week was not preprogrammed to detect when a vehicle was undergoing laboratory emissions testing.

But it is not clear what role Bosch played, how closely it worked with VW to modify the engine management software and how much it knew about VW's intentions to use software to cheat on emissions standards.

Denner declined to comment on the matter.

He added that VW had not started talks to demand lower prices, following a media report that VW planned to extract 3 billion euros in price cuts from its suppliers to help mitigate the costs of the scandal.

Detroit News:

http://www.detroitnews.com/story/business/autos/2015/10/13/ann-arbor-epa-lab-diesel-tests-vw-scandal/73888296/

Ann Arbor EPA lab tests other cars after VW scandal

Michael Martinez, The Detroit News 5:05 p.m. EDT October 13, 2015

Ann Arbor — The Environmental Protection Agency on Tuesday said it's begun testing other automakers' vehicles in the wake of Volkswagen AG's massive diesel-testing scandal. Some of those tests are being done at the agency's emissions testing lab in Ann Arbor.

Janet McCabe, assistant administrator of the EPA's office of air and radiation, said the agency is "upping our game" following VW's admission last month that it cheated on emissions tests for more than 11 million diesel cars worldwide. The EPA said late last month it would conduct more spot checks of light-duty cars and trucks, testing vehicles owned by individuals and rental companies in real-world driving conditions. The EPA also could take cars from manufacturers' assembly lines.

"We're focused on diesel right now, but ... we're becoming the unpredictable EPA, so we'll be

testing a range of vehicles with a range of configurations and situations," McCabe told reporters at a Wednesday technology showcase event.

The EPA sent letters to automakers late last month, warning that it will take further steps to prevent fraud. New safeguards will "detect any kind of defeat devices" that might turn off pollution-control equipment, Chris Grundler, the head of the EPA's office of transportation and air quality, said. He called the new tests part of an "evolution" of enforcement.

McCabe declined to say if the agency discovered that any other automakers have used defeat devices. "When we finish that process we'll be able to talk about the results," she said.

The California Air Resources Board and Environment Canada also are conducting real-world vehicle emissions testing, and all three facilities plan to share the results.

McCabe said the EPA isn't necessarily looking at software that could potentially trigger the defeat devices, which VW used to evade tests on its diesel vehicles.

"Our focus is on what's coming out of the tailpipe, which is how our standards are set and what the cars need to be measured up against," she said. "What we're focused on is whether they meet the standards that are in our rules."

McCabe was in Ann Arbor Wednesday to celebrate the launch of the EPA's new heavy-duty truck chassis dynamometer, a $3 million piece of equipment built in Germany that allows the agency to perform emissions tests on full-size heavy-duty trucks. Previously, the EPA had to spend about a week removing truck engines to run the tests.

The new dynamometer is housed in part of the agency's 200,000-square-foot National Vehicle & Fuel Emissions lab in Ann Arbor. The lab includes a number of emissions testing rooms that run simulations on cars, trucks and even small equipment like lawn mowers in a wide range of climates and conditions

EPA hasn't decided if new software on 2016 VW diesels is legal

ANN ARBOR, MICH. | BY PAUL LIENERT

U.S. regulators haven't determined the legality of a new emission-control device on Volkswagen's (VOWG_p.DE) 2016 diesel models, a top official said on Tuesday.

Those models still have not been certified for sale by the U.S. Environmental Protection Agency.

The existence of the new software was made public last week by VW's top U.S. executive in testimony to a congressional subcommittee investigating the German automaker's diesel cheating scandal.

The company has not confirmed speculation that the new software was configured before the wider emissions scandal broke on Sept. 18.

"We have a long list of questions for VW," said EPA Assistant Administrator Janet McCabe at a media briefing here. "When we have all of the answers, we will be able to make a determination" on the whether the device is legal or considered to be a "defeat device" designed to circumvent U.S. emission rules.

VW last month admitted that it installed illegal software on its 2009-2015 U.S. diesel models that enabled the cars to pass laboratory tests, but dump higher-than-legal limits of pollutants in real-world driving.

VW told regulators only recently that some of its U.S. diesel models included a previously undisclosed software feature that could affect emission controls on the 2016 models, according to Michael Horn, president and CEO of Volkswagen Group of America. Horn told U.S. lawmakers last week that the company subsequently had withdrawn its application for EPA certification of its 2016 diesel models.

Asked for additional detail, a VW spokesperson on Monday said the software "has the function of a warmup strategy which is subject to approval" by EPA. Typical diesel emission control systems are designed to be most effective when the engine is warmed up.

The EPA defines such software as an "auxiliary emission control device," or AECD, and describes it as any device that can change the operation of the vehicle's emission control system.

The agency also requires automakers to disclose the existence of such a software device, including "a rationale for why it is not a defeat device."

VW on Monday said the EPA is evaluating the new software device, and that the automaker is "working with the regulators to continue the 2016 certification process" for VW vehicles equipped with the 2.0-liter diesel engine.

Daily Caller:

Volkswagen Lobbied Obama Administration For Green Tax Credits

STEVE BIRR

11:41 AM 10/13/2015

As President Barack Obama pushed his green energy proposals for the auto-industry in 2011, Volkswagen was lobbying the administration for tax credits on its now tainted line of diesel vehicles.

Volkswagen wanted a green tax credit that applies to electric cars to be given to their diesel line as well. The Environmental Protection Agency, however, refused to go along with Volkswagen's plan and also declined Toyota's request to apply the same tax credit to their hybrid electric cars.

EPA documents from 2009 and 2010 show that Volkswagen supported the Obama administration's plan to reduce carbon dioxide emissions from automobiles. Former VW CEO Stefan Jacoby wrote to the EPA in 2010 praising their "leadership on this important subject." Jacoby, along with the EPA and other auto-makers, said they would "aim to make substantial annual progress in reducing transportation sector greenhouse gas emissions and fossil fuel consumption consistent with the Obama Administration's energy and climate security goals."

While Volkswagen was publicly backing White House efforts to tackle global warming and push green vehicles, the automaker was quietly lobbying behind the scenes to get government subsidies — the political price for the company's support of Obama's agenda. But the EPA refused to play ball, and Volkswagen withdrew its support for Obama's green vehicle push, according to The New York Times.

Margo Oge, the former director of the EPA Office of Transportation and Air Quality who worked closely with auto-makers on these proposals, told The New York Times that Volkswagen "wanted a special deal for diesel cars that we now know weren't even meeting the standard." Oge suggested that Volkswagen thought their diesel technology was superior to electric or hybrid alternatives, saying, "These people had religion, and that religion was diesel."

When Obama announced his plan to reduce carbon dioxide emissions from cars, Volkswagen was one of the only major automakers to not sign a letter of support for the president's agenda. The New York Times reports that much of this attitude came from overseas.

"My sense was that things were being dictated by Germany," said Oge.

Without a tax credit or subsidy, Volkswagen was going to have a tougher time meeting regulatory standards on emissions while still being able to advertise their diesel vehicles' good fuel economy and relatively low price. These reasons might have played a role in Volkswagen using "defeat devices" to get around EPA emissions tests.

Despite Volkswagen's efforts to get government assistance for their diesel line, their lobbying footprint in America remains relatively small, which could hurt them as this scandal moves forward. Volkswagen spent just $1.2 million on lobbying in 2014, a number dwarfed by General Motors which spends an average of $8.5 million a year on lobbying.

GM just recently settled with the government over the fact that they knowingly hid information about a faulty ignition switch that was linked directly to the deaths of 174 people. They were fined only $900 million and no one at GM was ever charged. Volkswagen currently faces up to $18 billion in potential fines.

2016 VW diesels have new software affecting emissions tests

Posted: Wednesday, October 14, 2015 10:15 am

WASHINGTON (AP) — Volkswagen has disclosed to U.S. regulators that there is additional suspect software in its 2016 diesel models that would potentially help their exhaust systems run cleaner during government tests.

Volkswagen confirmed to The Associated Press that the "auxiliary emissions control device" at issue operates differently from the "defeat" device software included in the company's 2009 to 2015 models disclosed last month. That disclosure triggered the worldwide cheating scandal engulfing the world's largest automaker.

The newly revealed software makes a pollution control catalyst heat up faster, improving performance of the device that separates smog-causing nitrogen oxide into harmless nitrogen and oxygen gases.

VW spokeswoman Jeannine Ginivan said the new issue with the 2016 vehicles was first revealed last week to U.S. Environmental Protection Agency and California regulators.

"Volkswagen has disclosed, in the application process for the model year 2016 2.0 TDI models, an auxiliary emissions control device," Ginivan said. "This has the function of a warmup strategy which is subject to approval by the agencies. The agencies are currently evaluating this and

Volkswagen is submitting additional information."

AP first reported last week that the EPA and California Air Resources Board are investigating "the nature and purpose" of additional software on the new VW models. Regulators have not yet determined whether the code is a defeat device installed specifically to cheat on emissions tests, said Janet McCabe, acting assistant EPA administrator for air quality.

"We have a long list of questions for VW about this," she said Tuesday at a dedication ceremony for a new heavy-duty truck testing lab in Ann Arbor, Michigan. "We're getting some answers from them, but we do not have all the answers yet."

Volkswagen already faced an ongoing criminal investigation and billions in fines for violating the Clean Air Act for its earlier emissions cheat, as well as a raft of state investigations and class-action lawsuits filed on behalf of customers.

If it is determined the new issue is a second defeat device, that would call into question recent assertions by top VW executives that responsibility for the cheating scheme lay with a handful of rogue software developers who wrote the original code installed with the company's diesel engines starting with the 2009 model year.

The separate device included in the redesigned 2016 cars would appear to suggest a multi-year effort by the company to influence U.S. emissions tests that continued even after regulators began pressing the company last year about irregularities with the emissions produced by the older cars.

A congressional staffer briefed on the issue last week told AP that VW probably didn't need the additional software to meet government emissions standards, but that the device appears intended to ensure the 2016 cars would pass by wider margins. The staffer spoke on the condition of anonymity because he was not authorized to talk publicly about the ongoing investigation.

The company's most senior U.S.-based executive announced in congressional testimony last

week that the German automaker had withdrawn applications seeking certification of its 2016 diesels because of on-board software that hadn't been disclosed to regulators.

However, the statement by Volkswagen of America CEO Michael Horn left unclear whether the issue with the 2016 models was the same as that in the earlier models, or whether it potentially constituted a new violation. Manufacturers are required by law to disclose any devices affecting emissions controls as part of the process to receive the EPA certifications required to sell the cars in the country.

EPA's McCabe wouldn't say if VW's failure to disclose the software in its 2016 application for emissions certification was illegal. "I don't want to speak to any potential subjects of an enforcement activity," she said.

VW is now working with regulators to continue the certification process needed to sell the 2016 diesel cars.

The delay is bad news for Volkswagen dealers, who had been anticipating delivery of the new models to replace older inventory which they can no longer offer to customers. Thousands of 2016 Beetles, Golfs, Jettas and Passats will remain quarantined in U.S. ports until a fix can be developed, approved and carried out.

Matthew Daly contributed from Washington. Krisher reported from Ann Arbor, Michigan.

Fortune

"Dozens" of managers implicated in Volkswagen scandal

by Geoffrey Smith

OCTOBER 14, 2015, 10:37 AM EDT

And there's more woe for VW as the designated head of its new North America region refuses to take up post.

The external investigation that Volkswagen AG VLKAY 0.41% commissioned is making alarmingly quick (and leaky) progress.

According to the German magazine and website Der Spiegel, the circle of managers with direct knowledge of how the company falsified the emissions performance of its diesel vehicles is much wider than the company had so far indicated. Last week, Michael Horn, head of the company's U.S. operations, had told a Congressional committee that the decision to install "defeat devices" that masked the actual level of emissions was taken by a small group, and wasn't a corporate decision.

Der Spiegel cited company sources as saying that "at least 30 people" were involved in the scandal, and that the final number may be higher. Earlier this month, VW's board had commissioned law firm Jones Day LLC to conduct an investigation into the affair, promising a rigorous clean-up. Spiegel's story referred to the first preliminary findings of that investigation. These aren't being made public yet.

It wasn't clear whether the company had suspended any more employees. According to media reports, the senior R&D managers at the group's three leading brands, VW, Audi and Porsche, have all been suspended while the investigation goes on.

A spokesman for Volkswagen didn't immediately respond to a request for comment.

In separate news Wednesday, it emerged that Winfried Vahland, who was slated to take over as head of the VW group's new North American division, is to leave the company at his own request.

The new structure was unveiled at the first board meeting after the resignation of CEO Martin Winterkorn, and was aimed at devolving more power away from the group's headquarters in Germany.

Škoda, the low-end, Czech-based unit of VW which Vahland has run for the last five years, said "differing views on the organisation of the new Group region have led to this decision." It added that it is "expressly not related to current events on the issue of diesel engines."

Vahland had been with the VW group for 25 years, and had run Czech-based Škoda since 2010. Before that he had been head of VW's regional operations in China. According to some reports, Winterkorn had pressed for Vahland to succeed him as CEO.

After pollution scandal, Volkswagen to focus on electric vehicles

October 14th, 2015 by Associated Press

The all-new Chattanooga built VW Passat TDI cruises on East Brow Road atop Signal Mountain early Wednesday afternoon. Staff photo by Dan Henry/Chattanooga Times Free Press

Volkswagen says it will shift its focus toward developing electric cars.

It aims to develop new hybrid and electric vehicles in response to its emissions scandal.

The new steps were part of a plan to confront the company's scandal over cars that were equipped with computer software that let them evade U.S. emissions tests.

Volkswagen division head Herbert Diess said in a statement Tuesday the company would change its approach to diesel emissions in Europe and North America and adopt so-called selective catalytic converter technology, or SCR. That is a system that injects the chemical substance urea into the exhaust stream to neutralize harmful nitrogen oxides.

He said that change would come "as soon as possible."

Diess also said the company would reduce spending on investments by 1 billion euros ($1.1billion) and redouble efforts to cut other costs.

Volkswagen will expand its modular construction system — which involves sharing technical specifications and parts across different models to save money — to include new plug-in hybrid and electric vehicles.

The company additionally plans to turn the next version of its large Phaeton luxury sedan into an electric-only vehicle to demonstrate the company's technological competence.

The Phaeton, a project introduced by former CEO Ferdinand Piech, has been criticized as a money-loser. The Piech and Porsche families own the majority of voting shares in Volkswagen through a holding company.

"The Volkswagen brand is repositioning itself for the future," Diess said in a statement. "We are becoming more efficient, we are giving our product range and our core technologies a new focus, and we are creating room for forward-looking technologies by speeding up the efficiency

program."

Diess is a recent hire from competitor BMW, where he oversaw development of new models including the i3 electric and i8 plug-in hybrid vehicles.

Volkswagen AG, whose other brands include Audi and Skoda, is facing a crisis after U.S. authorities said it evaded emissions checks on 482,000 vehicles. The company has set aside 6.5 billion euros ($7.3 billion) to cover the costs of recalls and fines. But analysts say the costs in terms of fines and lost sales will likely be considerably higher.

Earlier, the governor of Germany's Lower Saxony state, which holds a 20 percent stake in Volkswagen, said the automaker should have admitted earlier that it manipulated emissions data in the U.S. Volkswagen acknowledged the deception to U.S. regulators on Sept. 3, more than a year after researchers published a study showing the real-world emissions of two VW models were far higher than allowed.

Governor Stephan Weil told Lower Saxony's state legislature on Tuesday that "this confession should clearly have come a great deal earlier — another serious mistake," news agency dpa reported.

Weil sits on Volkswagen's board of directors. He has said that the state's representatives were "completely surprised" by the emissions scandal and vowed to work to protect jobs.

Volkswagen North America Chief-Designate Quits

Winfied Vahland was head of Skoda brand

By SARAH SLOAT

Oct. 14, 2015 9:05 a.m. ET

FRANKFURT— Volkswagen AG parted ways with another senior executive Wednesday. Winfried Vahland is leaving the company due to differences over the auto maker's North America organization, which he was poised to oversee.

The automotive group, in the grips an international emissions-testing scandal, had designated Mr. Vahland, currently the head of Volkswagen's Czech Republic-based Skoda brand, as the new chief of its North America business last month.

"This decision is expressly not related to current events on the issue of diesel engines," Skoda said in a statement. Skoda said Mr. Vahland is leaving at his own request.

Volkswagen has been in disarray since mid-September, when it admitted to using software in millions of diesel cars that allow them to run cleaner in emissions tests than on the road. The disclosure, which came first for cars sold in the U.S., triggered a boardroom reshuffle, a profit warning and cutbacks in investment spending.

The group's supervisory board elected Hans Dieter Pötsch, the company's 64-year-old chief financial officer, as chairman last week, filing a post left open since April when former patriarch Ferdinand Piëch resigned. Matthias Müller, head of Volkswagen's Porsche brand, had replaced Martin Winterkorn as Volkswagen's CEO after Mr. Winterkorn resigned last month in the wake of the diesel-engine scandal.

New Volkswagen North America chief Winfried Vahland out after three weeks

Nathan Bomey, USA TODAY 9:19 a.m. EDT October 14, 2015

Volkswagen's newly appointed head of North America is leaving the company less than three weeks after he was assigned to that position, injecting a new measure of instability as the company navigates an emissions scandal.

The sudden exit of Winfried Vahland gives the company's sweeping restructuring of its global operations a discombobulated feel, raising further questions about the future of its business in the U.S.

Vahland and Volkswagen had "differing views" on the company's new structure, the automaker said in a statement. His exit is "expressly not related" to the emissions scandal, VW said.

Vahland's swift appointment as head of the new North America region on Sept. 25 was billed as critical to creating a cohesive strategy for Volkswagen in one of the company's few weak spots. It came just a week after the U.S. Environmental Protection Agency exposed the fact that Volkswagen had installed software on vehicles to cheat emissions tests.

The company's U.S. chief, Michael Horn, who was set to report to Vahland, is staying in his current role.

Volkswagen did not immediately name a successor for Vahland, who also led Volkswagen's China operation for a period and was most recently chairman of the Skoda brand.

"In the last 25 years, Professor Vahland made a great contribution to the company," Volkswagen Group CEO Matthias Mueller said in a statement. "We respect his decision and thank him for his exceptional performance."

AP

Recently named head of VW North America will not take post

By DAVID McHUGH and TOM KRISHER

Oct. 14, 2015 9:38 AM EDT

FRANKFURT, Germany (AP) — The recently named head of Volkswagen's North American business won't be taking up his new job - and has left the company.

The announcement comes as Volkswagen faces a scandal over rigging the results of emissions testing of its diesel vehicles in the U.S. It means that one of the company's most experienced managers will not be coming to lead the company's response in the United States as it faces possible heavy fines from the Environmental Protection Agency.

Volkswagen's Skoda division made the announcement about its chairman, Winfried Vahland, in a news release on Wednesday.

The release said that Vahland will not be moving to take over his new position carrying overall responsibility for North America. It said his decision to quit was not related to the scandal over the diesel engines.

On Sept. 24, Volkswagen announced a reorganization of its North American operations that put Vahland over country executives including Volkswagen's U.S. chief, Michael Horn. The announcement came the same day Volkswagen named Matthias Mueller as CEO after Martin Winterkorn stepped down from the job.

VW had said Horn would remain as president and CEO of Volkswagen Group of America, but its U.S., Canada and Mexico markets will be "combined and significantly strengthened" to form a new "North America region" led by Vahland.

Vahland, the former head of VW's crucial China business, was leaving because of "differing views on the organization of the new group region."

Mueller thanked him for 25 years of service and a "great contribution to the company."

"We respect his decision and thank him for his exceptional performance," Mueller was quoted as saying in the Skoda statement.

Skoda, based in the Czech Republic, is one of VW's brands, which also include Audi, SEAT, Lamborghini and Bentley.

Forbes:

http://www.forbes.com/sites/beltway/2015/10/13/how-a-carbon-tax-could-have-prevented-the-volkswagen-diesel-scandal/2/

How A Carbon Tax Could Have Prevented The Volkswagen Diesel Scandal

Howard Gleckman, CONTRIBUTOR

If anyone needed another example of why a carbon tax is a good idea, look no further than Volkswagen's diesel scandal. The automaker's efforts to game the current system are a case study in what's wrong with government attempts to reduce pollution with regulation and tax subsidies, rather than through a relatively straight-forward tax on carbon-based fuels.

The current system is complex mix of environmental carrots and sticks. The sticks include regulation such as fuel economy standards. The carrots include tax subsidies. One was the (now-expired) alternative motor vehicle tax credit that was available to specific models that met detailed fuel economy requirements. Two models of VW Jettas qualified for credits of $1,300 and the LA Times reported in September that the government paid as much as $51 million in credits to buyers of VW diesel cars.

Unable to limit emissions, give consumers the high performance they want, and meet fuel economy standards, VW cheated. As you know by now, the firm installed software in its diesel cars designed to fool routine emissions tests—which made the cars appear "cleaner" than they really were. In all, VW reportedly sold 500,000 cars in the US from 2009-2015 with the rogue software. Here is a helpful description from Vox explaining the whole sad story.

VW eventually got caught, of course. It faces penalties from EPA and potential criminal charges for violating the False Claims Act, as well as an investigation by the Senate Finance Committee. CEO Martin Winterkorn has resigned and the firm has stopped selling diesel cars in the US.

Still, a lot of this mess could have been avoided with a carbon tax. Such a levy could replace many—though not all– of these complex rules and eliminate most incentives for gaming. A carbon tax would not help reduce local air pollutants such as NOx so it would not replace all auto pollution regulations. But it could supplant those that aim to reduce carbon emissions from vehicles.

For drivers, the choice would be relative simply: You buy a carbon-based fuel, you pay a tax. The more carbon in the fuel, the more tax you pay. The manufacturer wouldn't need to hit a mandated fuel economy standard. No-one would need to worry about conflicting regulations.

Instead, consumers would likely respond to higher taxes by demanding cars that, one way or another, use less carbon-based fuel. We have lots of evidence that consumers are extremely responsive to changes in gasoline prices—the price goes up, they buy Priuses; it goes down, they switch to less fuel-efficient vehicles.

And with a big carbon tax, manufacturers will probably respond to consumer demands by producing low-carbon vehicles. The proof will be at the pump. If an automaker lies about its fuel efficiency, it will be immediately obvious: Consumers will be filling up their tanks more often than they expected. And government won't have to test carbon emissions from tens of millions of cars. It will just need to calculate the carbon content of their fuel.

There is one other classic argument for corrective taxes such as a carbon tax. Such a levy provides ongoing incentives for firms to enhance technology and continue to drive down emissions. But with regulation or subsidies, even honest producers are more likely to hit the mandated target—and stop.

This is not to suggest that carbon taxes are not without their own complex issues. My Tax Policy Center colleagues Donald Marron and Eric Toder have described some of the technical challenges. But overall, market mechanisms such as carbon taxes (or a cap-and-trade system) are far more efficient, and much less prone to cheating, than a system based on regulations and subsidies.

Volkswagen's Designated North America Chief Leaves Carmaker

Christoph Rauwald

October 14, 2015 — 8:58 AM EDT

Volkswagen AG's designated North America chief turned down the job in the wake of a management revamp triggered by the diesel-emissions scandal.

Winfried Vahland, a company veteran who currently leads VW's Czech Skoda unit, decided to not take over the new post as had been planned and will leave the carmaker, Skoda said in an e-mailed statement.

Vahland was among the candidates to succeed former VW Chief Executive Officer Martin Winterkorn, who resigned last month, but the supervisory board favored former Porsche chief Matthias Mueller. Vahland is leaving Wolfsburg, Germany-based Volkswagen at his own request. His departure is unrelated to the investigations into the rigging of millions of diesel engines worldwide, Skoda said in the statement.

Volkswagen said Tuesday it will reduce annual investment by about 1 billion euros ($1.1 billion) at its namesake car brand as the automaker steps up a cost-cutting push to weather the impact of the diesel-emissions scandal.

VW is under increasing financial strain following revelations last month that it rigged diesel engines to circumvent emissions regulations. The company set aside 6.5 billion euros for repairs and to compensate customers, but has said that won't be enough. VW faces numerous lawsuits in the U.S., where it has lost money and struggled to become more than an also-ran despite rapid expansion elsewhere.

Vahland was appointed head of VW's North American operations as part of a restructuring plan pushed by Mueller and meant to shift more responsibility to brand and regional managers. VW wasn't immediately available to comment on whether it still planned to fill the post.

Business Insider:

http://www.businessinsider.com/r-bosch-sees-diesel-market-so-far-unharmed-by-volkswagen-scandal-2015-10

Bosch sees diesel market so far unharmed by Volkswagen scandal

RENNINGEN, Germany (Reuters) - German automotive supplier Robert Bosch [ROBG.UL] has not seen any change so far in the diesel car market as a result of an emissions scandal that has rocked Volkswagen , its chief executive said on Wednesday.

"It will depend, though, on an active campaign for diesel to quickly dispel the current uncertainty that many consumers are feeling," Volkmar Denner told reporters at the opening of a new research center in the German town of Renningen near Stuttgart.

German Economy Minister Sigmar Gabriel warned against condemning diesel technology overall but said Germany needed to do better in switching to alternative engines.

He said he favored introducing incentives to reduce the price difference between electric and conventional cars.

Volkswagen, Europe's largest carmaker, last month admitted to cheating U.S. diesel emissions tests, sparking a crisis that unseated its CEO and wiped around a quarter off its market value.

Bosch is the maker of a popular diesel engine management program used by several top automakers including VW, which U.S. officials said last week was not preprogrammed to detect when a vehicle was undergoing laboratory emissions testing.

But it is not clear what role Bosch played, how closely it worked with VW to modify the engine management software and how much it knew about VW's intentions to use software to cheat on emissions standards.

Denner declined to comment on the matter.

He added that VW had not started talks to demand lower prices, following a media report that VW planned to extract 3 billion euros in price cuts from its suppliers to help mitigate the costs of the scandal.

Detroit News:

http://www.detroitnews.com/story/business/autos/2015/10/13/ann-arbor-epa-lab-diesel-tests-vw-scandal/73888296/

Ann Arbor EPA lab tests other cars after VW scandal

Michael Martinez, The Detroit News 5:05 p.m. EDT October 13, 2015

Ann Arbor — The Environmental Protection Agency on Tuesday said it's begun testing other automakers' vehicles in the wake of Volkswagen AG's massive diesel-testing scandal. Some of those tests are being done at the agency's emissions testing lab in Ann Arbor.

Janet McCabe, assistant administrator of the EPA's office of air and radiation, said the agency is "upping our game" following VW's admission last month that it cheated on emissions tests for more than 11 million diesel cars worldwide. The EPA said late last month it would conduct more spot checks of light-duty cars and trucks, testing vehicles owned by individuals and rental companies in real-world driving conditions. The EPA also could take cars from manufacturers' assembly lines.

"We're focused on diesel right now, but ... we're becoming the unpredictable EPA, so we'll be testing a range of vehicles with a range of configurations and situations," McCabe told reporters

at a Wednesday technology showcase event.

The EPA sent letters to automakers late last month, warning that it will take further steps to prevent fraud. New safeguards will "detect any kind of defeat devices" that might turn off pollution-control equipment, Chris Grundler, the head of the EPA's office of transportation and air quality, said. He called the new tests part of an "evolution" of enforcement.

McCabe declined to say if the agency discovered that any other automakers have used defeat devices. "When we finish that process we'll be able to talk about the results," she said.

The California Air Resources Board and Environment Canada also are conducting real-world vehicle emissions testing, and all three facilities plan to share the results.

McCabe said the EPA isn't necessarily looking at software that could potentially trigger the defeat devices, which VW used to evade tests on its diesel vehicles.

"Our focus is on what's coming out of the tailpipe, which is how our standards are set and what the cars need to be measured up against," she said. "What we're focused on is whether they meet the standards that are in our rules."

McCabe was in Ann Arbor Wednesday to celebrate the launch of the EPA's new heavy-duty truck chassis dynamometer, a $3 million piece of equipment built in Germany that allows the agency to perform emissions tests on full-size heavy-duty trucks. Previously, the EPA had to spend about a week removing truck engines to run the tests.

The new dynamometer is housed in part of the agency's 200,000-square-foot National Vehicle & Fuel Emissions lab in Ann Arbor. The lab includes a number of emissions testing rooms that run simulations on cars, trucks and even small equipment like lawn mowers in a wide range of climates and conditions

EPA hasn't decided if new software on 2016 VW diesels is legal

ANN ARBOR, MICH. | BY PAUL LIENERT

U.S. regulators haven't determined the legality of a new emission-control device on Volkswagen's (VOWG_p.DE) 2016 diesel models, a top official said on Tuesday.

Those models still have not been certified for sale by the U.S. Environmental Protection Agency.

The existence of the new software was made public last week by VW's top U.S. executive in testimony to a congressional subcommittee investigating the German automaker's diesel cheating scandal.

The company has not confirmed speculation that the new software was configured before the wider emissions scandal broke on Sept. 18.

"We have a long list of questions for VW," said EPA Assistant Administrator Janet McCabe at a media briefing here. "When we have all of the answers, we will be able to make a determination" on the whether the device is legal or considered to be a "defeat device" designed to circumvent U.S. emission rules.

VW last month admitted that it installed illegal software on its 2009-2015 U.S. diesel models that enabled the cars to pass laboratory tests, but dump higher-than-legal limits of pollutants in real-world driving.

VW told regulators only recently that some of its U.S. diesel models included a previously undisclosed software feature that could affect emission controls on the 2016 models, according to Michael Horn, president and CEO of Volkswagen Group of America. Horn told U.S. lawmakers last week that the company subsequently had withdrawn its application for EPA certification of its 2016 diesel models.

Asked for additional detail, a VW spokesperson on Monday said the software "has the function of a warmup strategy which is subject to approval" by EPA. Typical diesel emission control systems are designed to be most effective when the engine is warmed up.

The EPA defines such software as an "auxiliary emission control device," or AECD, and describes it as any device that can change the operation of the vehicle's emission control system.

The agency also requires automakers to disclose the existence of such a software device, including "a rationale for why it is not a defeat device."

VW on Monday said the EPA is evaluating the new software device, and that the automaker is "working with the regulators to continue the 2016 certification process" for VW vehicles equipped with the 2.0-liter diesel engine.

Daily Caller:

http://dailycaller.com/2015/10/13/volkswagen-lobbied-obama-administration-for-green-tax-credits/

Volkswagen Lobbied Obama Administration For Green Tax Credits

STEVE BIRR

11:41 AM 10/13/2015

As President Barack Obama pushed his green energy proposals for the auto-industry in 2011, Volkswagen was lobbying the administration for tax credits on its now tainted line of diesel vehicles.

Volkswagen wanted a green tax credit that applies to electric cars to be given to their diesel line as well. The Environmental Protection Agency, however, refused to go along with Volkswagen's plan and also declined Toyota's request to apply the same tax credit to their hybrid electric cars.

EPA documents from 2009 and 2010 show that Volkswagen supported the Obama administration's plan to reduce carbon dioxide emissions from automobiles. Former VW CEO Stefan Jacoby wrote to the EPA in 2010 praising their "leadership on this important subject." Jacoby, along with the EPA and other auto-makers, said they would "aim to make substantial annual progress in reducing transportation sector greenhouse gas emissions and fossil fuel consumption consistent with the Obama Administration's energy and climate security goals."

While Volkswagen was publicly backing White House efforts to tackle global warming and push green vehicles, the automaker was quietly lobbying behind the scenes to get government subsidies — the political price for the company's support of Obama's agenda. But the EPA refused to play ball, and Volkswagen withdrew its support for Obama's green vehicle push, according to The New York Times.

Margo Oge, the former director of the EPA Office of Transportation and Air Quality who worked closely with auto-makers on these proposals, told The New York Times that Volkswagen "wanted a special deal for diesel cars that we now know weren't even meeting the standard." Oge suggested that Volkswagen thought their diesel technology was superior to electric or hybrid alternatives, saying, "These people had religion, and that religion was diesel."

When Obama announced his plan to reduce carbon dioxide emissions from cars, Volkswagen was one of the only major automakers to not sign a letter of support for the president's agenda. The New York Times reports that much of this attitude came from overseas.

"My sense was that things were being dictated by Germany," said Oge.

Without a tax credit or subsidy, Volkswagen was going to have a tougher time meeting regulatory standards on emissions while still being able to advertise their diesel vehicles' good fuel economy and relatively low price. These reasons might have played a role in Volkswagen using "defeat devices" to get around EPA emissions tests.

Despite Volkswagen's efforts to get government assistance for their diesel line, their lobbying footprint in America remains relatively small, which could hurt them as this scandal moves forward. Volkswagen spent just $1.2 million on lobbying in 2014, a number dwarfed by General Motors which spends an average of $8.5 million a year on lobbying.

GM just recently settled with the government over the fact that they knowingly hid information about a faulty ignition switch that was linked directly to the deaths of 174 people. They were fined only $900 million and no one at GM was ever charged. Volkswagen currently faces up to $18 billion in potential fines.

monroney(18) A3 e-tron ultra.pdf

Jim,

When you tested the vehicle was it blended or non-blended?

My notes from an 11/20/2013 meeting indicate it was a parallel (blended) PHEV but the engine didn't come on during UDDS and Hwy testing.

[The label format is for a non-blended PHEV.]

Hi Dave;

As your requested, attached is a sample of the fuel economy label for the 2106 Audi A3 e-tron ultra. Please let me now if you have any concerns and that all the required data has been properly displayed. The factory has told me that it is a non-blended PHEV, I believe this point was already pointed out to EPA in an A3 e-tron presentation in early August.

Best regards,

Richard

EPA unveils new heavy-duty emissions-testing equipment at Ann Arbor lab

Ben Freed | benfreed@mlive.com on October 14, 2015 at 5:38 AM

At its annual Vehicle Technology Showcase, the National Vehicle and Fuel Emissions Laboratory in Ann Arbor unveiled a new tool for testing pollutants from heavy duty trucks.

The new chassis dynamometer is a massive treadmill for trucks that will help the lab simulate driving conditions and measure emissions in a real-time setting.

Before acquiring the $3 million machine, the lab had performed the tests by either removing the truck's engines—a difficult and time-consuming process—or installing portable engine measurement systems and driving the trucks on the road.

The Environmental Protection Agency, which runs the lab, will continue to use the other methods in addition to the chassis dynamometer, but this will allow for the testing of more trucks in shorter timeframes.

"Heavy duty trucks is the fastest growing transportation sector right now," Janet McCabe, who president Barack Obama has nominated to be assistant and administrator of the Office of Air and Radiation at the EPA, said.

"We move a lot of freight. It's amazing really how much is moved around our country and around the world."

Since the revelation in September that Volkswagen had installed software on its diesel cars that recognized when they were being tested on the chassis dynamometers, the EPA has focused on becoming more unpredictable testers. McCabe said the continued use of road and engine tests will be part of that strategy.

McCabe spoke just before a heavy duty truck was driven through a ceremonial banner and onto the new machine. She said the EPA has been working to improve standards and testing for heavy duty vehicles.

"Standards only help if they actually work out in practice," she said.

"That's why you need facilities like this. This facility is going to be a huge, huge element of our ability to move forward in curbing emissions."

Dear Phillip

I hope you're well, I wondered if you had reviewed the email below regarding the VW diesel emissions crisis.

The information in the media on VW is plentiful but often lacks detail and accuracy. Integer's Expert Briefing: The VW diesel emissions crisis goes beyond an account of what happened; it looks at the implications and consequences of VW's actions, not just for VW but for the diesel emissions industry as a whole.

This crisis will continue to impact the diesel emissions industry and your strategies need to account for this. This report offers a comprehensive solution providing crucial insights into what you can expect from the diesel industry - post VW crisis. Order securely online, email us or call +44 20 7503 1265 to discuss this report.

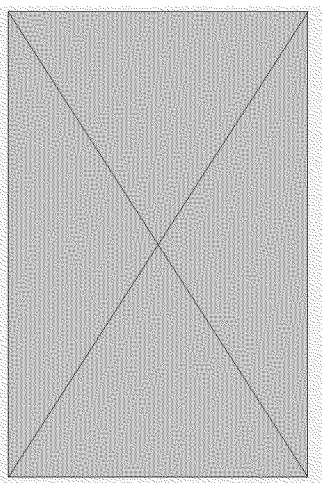
Kind regards,
Tim Cheyne - Director Environment & Emissions
Integer Research

NEW from Integer Research - Expert Briefing: The VW Diesel Emissions Crisis

Dear Phillip,

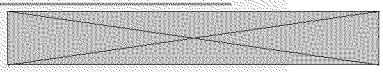
Volkswagen's (VW) recent 'defeat device' admission is one of the biggest scandals to hit the global emissions control market. This shock development is causing a great deal of uncertainty for all industry players.

Our emissions team have reacted quickly to prepare a comprehensive Expert Briefing exploring the issues in greater detail, offering vital primary research data and covering key areas, including:



Price: $950
Format: Powerpoint

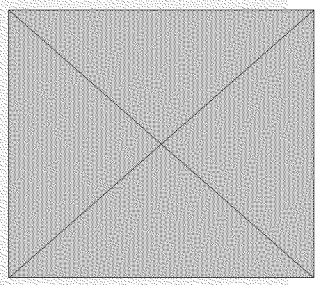
Overview >>
Free Extracts >>
Table of Contents >>



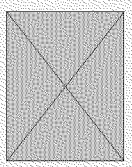
The report includes:

- The implications of the latest data from VW and from US customs
- Regulations and Electronic Control Units (ECUs) and fuel economy tests conducted by any independent group to date.
- How the rest of VW's business is likely to be affected
- The structure of emissions and CO2/fuel economy regulation in Europe
- The likelihood of active use of defeat devices by VW and others in Europe
- Implications for emissions regulations and diesel technology in Europe

Order online >>



User-friendly Powerpoint format



Cut through the media noise - acquire independent market data and expert analysis

We have seen much reported so far, and no doubt there will be more to come. All of which reinforces the need across the industry for trusted (no irony intended) data on what is actually happening and more importantly what it all means.

Why Integer?
Integer Research has spent over a decade analysing the diesel emissions sector. Our suite of leading conferences and range of high-quality publications and expert consulting services act as our credentials. Investing in our new Expert Briefing: The VW diesel emissions crisis >> will

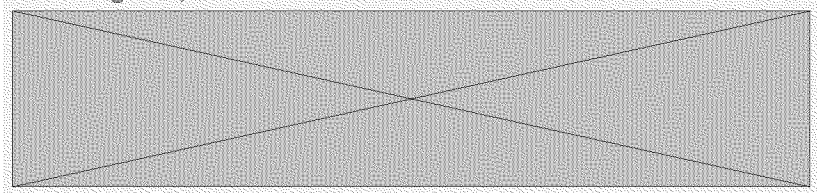
help answer your questions and provide vital clarity for your business.

You can order the briefing securely online today >> or alternatively, email us or call on +44 20 7503 1265.

I also look forward to seeing as many of you as possible at our forthcoming Integer Emissions Summit & DEF Forum USA 2015 >> in Chicago, 27-29 October, where we will also have a member of the VW emissions team presenting at the event.

If you have any questions regarding the impact of the VW story please don't hesitate to get in touch.

Kind regards,



Tim Cheyne
Director - Environment & Emissions

Subject: RE: Audi A3 e-tron ultra - Is it a blended or non-blended (parallel) PHEV?

Dave, correct, the engine didn't turn on during the CD tests but I think it may come on during on-road driving if the load request is high enough.

Jim,

When you tested the vehicle was it blended or non-blended?

My notes from an 11/20/2013 meeting indicate it was a parallel (blended) PHEV but the engine didn't come on during UDDS and Hwy testing.

[The label format is for a non-blended PHEV.]

Subject: Audi A3 e-tron ultra

Hi Dave;

As your requested, attached is a sample of the fuel economy label for the 2106 Audi A3 e-tron ultra. Please let me now if you have any concerns and that all the required data has been properly displayed. The factory has told me that it is a non-blended PHEV, I believe this point was already pointed out to EPA in an A3 e-tron presentation in early August.

Best regards,

Richard

Subject: FW: Audi HWY Charge Depleting test Results
VW_PHEV_CD_HWY_100815_Hioki.xlsx

Here's the electrical data. I should get the T/P data today too. I also reminded them about the UDDS results.

Subject: Audi HWY Charge Depleting test Results

Hi, Jim:

Attached is the data of the HWY Charge Depleting test. Please let me know if you also need the emissions reports to deliver them to you since we cannot get that data through Verify.

Yours, Arlene
